Investigación en matemática educativa. Miguel Eslava Camacho, Erika María Baltazar Martínez, 2021-01-04 La investigación en Matemática Educativa implica para la ENSEM la formación posgradual de maestrantes que desde la tradición normalista realizaron investigación íntimamente ligada a su práctica docente, el libro representa los esfuerzos de los egresados para la producción del conocimiento frente al desarrollo del pensamiento y didáctica matemática con el fin de dar cuenta de las posibilidades que brinda el acercamiento a las diversas bases epistemológicas hacia la comprensión y atención de la didáctica matemática, como una propuesta dirigida a todos aquellos que busquen introducirse en miradas hacia la investigación en torno a la matemática educativa. La propuesta hace énfasis en la interrelación teórica de posturas como la teoría emergente del pensamiento complejo de Edgar Morin, la postura hermenéutica de Michel De Certeau, la teoría de la interpretación de Agnes Heller, que permitieron interpretar los resultados obtenidos en campo desde una mirada social, que aunada a los estudios desarrollados en la disciplina de la matemática educativa, como la teoría de situaciones didácticas (Guy Brousseau), la teoría socioepistemológica de Ricardo Cantoral, entre otros, se plantean otros senderos hacia la generación del conocimiento, emanada desde las aulas de la ENSEM.

Mathematicians in Bologna 1861-1960 Salvatore COEN,2012-05-11 The scientific personalities of Luigi Cremona, Eugenio Beltrami, Salvatore Pincherle, Federico Enriques, Beppo Levi, Giuseppe Vitali, Beniamino Segre and of several other mathematicians who worked in Bologna in the century 1861-1960 are examined by different authors, in some cases providing different view points. Most contributions in the volume are historical; they are reproductions of original documents or studies on an original work and its impact on later research. The achievements of other mathematicians are investigated for their present-day importance.

Critical Perspectives on PISA as a Means of Global Governance António Teodoro,2022-03-24 This volume offers a critical examination of the Programme for International Students Assessment (PISA), focusing on its origins and implementation, relationship to other international large-scale assessments, and its impacts on educational policy and reform at national and cross-national levels. Using empirical data gathered from a research project carried out by the CeIED at Lusofona University, Lisbon, the text highlights connections between PISA and emergent issues including the international circulation of big science, expertise and policy, and identifies its conceptual and methodological limits as a global governance project. The volume ultimately provides a novel framework for understanding how OECD priorities are manifested through a regulatory instrument based on Human and Knowledge Capital Theory, and so makes a powerful case to search for new humanistic approaches. This text will benefit researchers, academics and educators with an interest in education policy and politics, international and comparative education, and the sociology of education more broadly. Those interested in the history of education will also benefit from this volume.

Mathematics and Technology Gilles Aldon,Fernando Hitt,Luciana Bazzini,Uwe Gellert,2017-04-05 This volume collects most recent work on the role of technology in mathematics education. It offers fresh insight and understanding of the many ways in which technological resources can improve the teaching and learning of mathematics. The first section of the volume focuses on the question how a proposed mathematical task in a technological environment can influence the acquisition of knowledge and what elements are important to retain in the design of mathematical tasks in computing environments. The use of white smart boards, platforms as Moodle, tablets and smartphones have transformed the way we communicate both inside and outside the mathematics classroom. Therefore the second section discussed how to make efficient use of these resources in the classroom and beyond. The third section addresses how technology modifies the way information is transmitted and how mathematical education has to take into account the new ways of learning through connected networks as well as new ways of teaching. The last section is on the training of teachers in the digital era. The editors of this volume have selected papers from the proceedings of the 65th, 66th and 67th CIEAEM conference, and invited the correspondent authors to contribute to this volume by discussing one of the four important topics. The book continues a series of

sourcebooks edited by CIEAEM, the Commission Internationale pour l'Étude et l'Amélioration de l'Enseignement des Mathématiques / International Commission for the Study and Improvement of Mathematics Education.
