Volume Four: Genes and Environment focuses on the interplay between nature and nurture throughout the life stages, and the ways in which a child's environment can influence his or her physical and mental health as an adult. Here is a monumental work that continues in the tradition pioneered by co-author Richard Lazarus in his classic book *Psychological Stress and the Coping Process*. which have become major themes of theory and investigation. As an integrative theoretical analysis, this volume pulls together two decades of research and thought on issues in behavioral medicine, emotion, stress management, treatment, and life span development. A selective review of the most pertinent literature is included in each chapter. The total reference listing for the book extends to 60 pages. This work is necessarily multidisciplinary, reflecting the many dimensions of stress-related problems and their situation within a complex social context. While the emphasis is on psychological aspects of stress, the book is oriented towards professionals in various disciplines, as well as advanced students and educated laypersons. The intended audience ranges from psychiatrists, clinical psychologists, nurses, and social workers to sociologists, anthropologists, medical researchers, and physiologists.
