R. Henry,P. Kettlewell

Sorghum Medicinal Food (Medicinal and Industrial Perspective) U.D. Chavan,2020-08-01 This book is mainly based on the latest research results and applications of sorghum food in human diet and gets good health benefits from it. Sorghum has several medical properties and cures several diseases as mentioned in the index. Sorghum grains can be converted in various indigenous food products and include in the daily human diet. Some of the specific sorghum components when added to foods, antioxidants control rancidity development, retard the formation of toxic oxidation products, maintain nutritional quality and extend the shelf-life of products. Sorghum diet is useful for curing cancer, diabetic disorder and so many other ailments also. In addition, sources of other beneficial components of sorghum are also discussed in detail. Sorghum is the only one cereal sustain under drought situation and gives definite yield under rain-fed condition. During current climate change situation sorghum is the best drought resistant crop for getting definite amount of grain yield.

Sorghum and Millets in Human Nutrition Food and Agriculture Organization of the United Nations,1995-01-01 The publication is broad in scope and coverage, starting with the history and nature of sorghum and millets and dealing with production, utilization and consumption. It provides extensive information on the nutritional value, chemical composition, storage and processing of these foods. In addition, the anti-nutritional factors present in these foods and ways of reducing their health hazards are discussed. The authors have described formulations of various popular foods prepared from sorghum and millets and their nutritional composition and quality, and they have compiled many recipes for the preparation of foods from regions where sorghum and millets are important dietary staples.

Handbook of Cereal Science and Technology, Revised and Expanded Karel Kulp,2000-03-28 This thoroughly revised second edition addresses the full spectrum of cereal grain science, employing agronomic, chemical, and technological perspectives and providing new and expanded treatment of food enrichment techniques, nutritional standards, and product quality evaluation. Written by over 40 internationally respected authorities, the

Cereal Grain Quality R. Henry,P. Kettlewell,2012-12-06 Cereals range from human food and beverages to animal

feeds and industrial products. It is human food and beverages which are the predominant uses covered in this book, since the nutritional quality of cereals for animal feed is described in other publications on animal nutrition, and industrial products are a relatively minor use of cereals. Cereals are the main components of human diets and are crucial to human survival. Three species, wheat, rice and maize, account for the bulk of human food. Barley is the major raw material for beer production and ranks fourth in world production. Other species such as sorghum are regionally important. This book covers all the major cereal species: wheat, rice, maize, barley, sorghum, millet, oats, rye and triticale. Specific chapters have been devoted to a description of the major end-uses of each of the species and to definition of the qualities required for each of their end uses. The functional and nutritional quality of cereals determines their suitability for specific purposes and may limit the quality of the end product, influencing greatly the commercial value of grain. An understanding of the factors that determine grain quality is thus important in the maintenance of efficient and sustainable agricultural and food production. The biochemical constituents of the grain that determine quality have been described in chapters on proteins, carbohydrates and other components. An understanding of the relationships between grain composition and quality is important in selecting grain for specific uses.

Nutritional Value of Sorghum Grain After Treatment with Water and Enzymes Paulo Carlos Silva, 1969 Two experiments involving growing chicks and one experiment involving laying hens were conducted to determine the nutritional value of soaked whole and ground sorghum grain containing 35 and 45 percent moisture, respectively, with and without the addition of enzyme to the soaking water. The soaked grain was held under anaerobic conditions for 21 days. The grain was dried at the end of the soaking period. The grain treatments determined a decrease in most of the amino acids in the grain. However, the decrease in the amino acids content of the grain did not cause an amino acid deficiency in the ration except for methionine and cystine. The sorghum grain treated with proteolytic and amylolytic enzymes suffered a drastic destruction of methionine. In the case of the Protease-treated grain, a complete destruction of methionine and a destruction of 25% of the cystine occurred. The Amylase treatment of the ground grain caused a destruction of 75% of the methionine and 75% of the cystine in the grain. In the Experiment 1 with growing chicks and in the laying hens experiment, the control group gave a better performance than the enzyme treatment groups. Methionine and cystine deficiencies seem to have caused the poor performance given by the enzyme treatment groups. When the methionine and cystine content of the ration were increased (Experiment 2 with broiler), the enzyme treatment group gave better performance than the control group. Water treated whole grain failed to improve the nutritional value of the grain.

Sorghum and Millets D. A. V. Dendy,1995 A compilation of the history, breeding, production, grain chemistry, nutritional quality, handling, and uses of sorghum and millet. Thirteen chapters cover history, taxonomy, and distribution; production and importance; agronomic principles; structure and chemistry; nutritional properties; storage, including drying for storage, with particular reference to tropical areas and the mycotoxin problem; traditional uses; new milling techniques and products; lager beers from sorghum; opaque beers; forage and feed; sweet sorghum substrate for industrial alcohol; and quality evaluation and trading standards. SELECTION OF ARTICLES ON FOOD LAW AND POLICY Innayatun Soeparna, dkk.,2025-10-08 This book encapsulates the essence of those crucial discussions, providing not only an overview of the current state of the field, but also a strategic framework for future action. The included fifteen papers offer cutting-edge research on a diverse range of topics, extending beyond food and agricultural policy to encompass the intersection of law and sustainable development. Consequently, the book is structured into two chapters. Chapter One presents selected papers on Food and Agricultural Law and Policy, while Chapter Two features selected papers on Law and Sustainable Development.

Diversity, Genetics, and Health Benefits of Sorghum Grain Davina Rhodes,2014 Staple cereal crops provide the majority of nutrients to the world's population, and thus, can significantly impact human nutrition and health. Phenotypic and genetic diversity within a crop can be useful for biofortification and crop improvement, but quantitative phenotyping is needed to identify varieties with high or low concentrations of a nutrient of interest, and to identify alleles responsible for quantitative trait variation of the nutrient. Sorghum (*Sorghum bicolor* (L.) Moench) is a diverse and widely adapted cereal crop that provides food for more than 500 million people in sub-Saharan Africa and Asia, and is becoming increasingly popular in specialty grain products in the United States. Sorghum is a valuable resource for nutrient diversity, as adaptation to different environments has led to extensive phenotypic and genetic diversity in the crop. Many sorghum varieties are rich in flavonoids, primarily 3-deoxyanthocyanidins and proanthocyanidins, which appear to protect against chronic inflammatory diseases. Most studies have only explored the health benefits of a small number of sorghum accessions, but over 45,000 sorghum accessions exist in crop gene banks. A large genetically diverse sorghum panel can be used to identify varieties with

high concentrations of flavonoids and to explore the effects of natural variation of sorghum flavonoids on inflammation. This same resource can also be used to identify varieties with high concentrations of protein, fat, or starch, which can lead to improved nutritional value of sorghum grain. The overall aim of my dissertation project was to quantify sorghum flavonoids and identify allelic variants controlling them; quantify grain composition more broadly (protein, fat, and starch) and identify allelic variants controlling them; and investigate anti-inflammatory properties of sorghum extracts with contrasting levels of flavonoids. Using a large germplasm resource (USDA National Plant Germplasm System), highthroughput methods of phenotyping (near-infrared spectroscopy) and genotyping (genotyping-by-sequencing), association mapping (genome-wide association studies), and in vitro inflammation models, the work presented here provides new insights into the diversity, genetics, and anti-inflammatory properties of sorghum nutrients that are important to human health. It provides a survey of grain nutrient diversity in a large global panel of sorghum, identifies quantitative trait loci and candidate genes for underlying controls of these nutrients, and demonstrates that a larger variety of sorghum accessions than previously thought have anti-inflammatory properties.

Pseudocereals Sanju Bala Dhull,Aarti Bains,Prince Chawla,Sawinder Kaur,2024-04-08 Pseudocereals: Production, Processing, and Nutrition provides an overview of the chemistry, processing, and technology of pseudocereals which have become super grains. The cultivation of pseudocereals has spread to over 70 different countries due to their attractive nutritional properties and for food security. This book discusses necessary information on different pseudocereals as well as practical information on cultivation procedures, equipment, food processing using pseudocereals and the use of by-products for bioactive compound extraction. It addresses concerns regarding globalization, food security, climate change and the needs of underdeveloped or developing countries. Key Features: Covers both common as well as less exploited pseudocereals Explains the grain structure and engineering properties of different pseudocereals Studies the effect of food processing on the bioactivity and nutritional value of pseudocereals and their products
