**Engineered Cementitious Composites for Electrified Roadway in Megacities** Ali Aryo Bawono, 2022-01-03 This book describes the development of an innovative solution for electrified roadway pavements based on engineered cementitious composites, which are exhibiting an extreme tensile strain capacity that is much higher than conventional concrete. This enables the pavement to work without steel reinforcement and to embed a dynamic wireless power transfer technology for charging electric vehicles. At first, the book presents a modified performance-driven design approach to improve the composites to achieve the optimum pavement design in terms of functional and structural performance. It shows that the modified composites can be used to fulfil the safety and comfort factors without neglecting the characteristics of conventional ones. Further, 3D finite element and fluid dynamics models are used to analyse the pavement properties. The validated models can predict the functional performance, including skid resistance, surface water drainage, and noise. In the remaining part of the thesis, an environmentally-friendly photocatalytic function for pavement made of engineered cementitious composites is investigated. In turn, a multi-criteria design analysis is proposed to identify the optimum functional performance of the pavements. All in all, this book reports on a comprehensive approach to design, analyse and optimize engineered cementitious composites for electrified road pavement application. A special emphasis is given on applications in Singapore and other tropical megacities.

*Supercollider 4* John Nonte, 2012-12-06 The fourth annual International Industrial Symposium on the Super Collider, rrssc held March 4-6, 1992, in New Orleans was a great success. Present at this year's conference were 839 attendees representing 24 universities and colleges, 34 states, 13 countries, 17 national laboratories, 11 research centers, many government entities at the local, state and federal levels, and 235 businesses and companies. This year's symposium also included 101 exhibits by 78 organizations. In all categories, this year's participation exceeded the totals of previous years and is an example of the growing support for the Superconducting Super Collider Program. This year's program had many highlights. One of the best was a message from President George Bush, read by Linda Stuntz, Acting Deputy Secretary, Department of Energy. President Bush said that each of us can be proud of the role that you are playing in building the Collider and in setting the stage for a new era of research and discovery in high energy physics. The 1992 IISCC's theme was SSC-Discovering the Future. This theme was chosen in commemoration of the 500th anniversary of Columbus's voyage of discovery and the relationship of the SSC with discovery. This theme was articulated by all the speakers in the opening plenary session. Progress on the program was also very evident at this year's symposium. In the pictorial session, 66 photographs from all over the world were displayed to highlight progress in making the SSC a reality.
