Compresores de Refrigeración German Sarmiento,2015-06-14 La misión del compresor es la de aspirar el gas que proviene del evaporador y transportarlo al condensador aumentando su presión y temperatura; simultáneamente aumenta la densidad del refrigerante mientras circula el fluido por el sistema. En el diseño y escogencia de los compresores se debe tener en cuenta que: * La temperatura del refrigerante a la salida del compresor debe ser menor o igual de 120°C o 248°F.

Frío comercial y expansión con tubo capilar Francesc Buqué Mezquida,2009-03-01 La colección Tecnicos de servicio tiene como objetivo principal dar a conocer, de una forma práctica y fácil de entender, los conocimientos necesarios para moverse en el mundo de la refrigeración. En los DVD se desarrollan los diferentes temas con imágenes reales, tanto del uso y manejo de las diferentes herramientas como del muestreo de los diferentes circuitos frigoríficos y eléctricos de cada instalación. También se explican las características de funcionamiento y el método a utilizar para el seguimiento y diagnóstico de las posibles averías que puedan producirse, así como de su reparación. El libro que acompaña a cada DVD es un soporte donde se desarrolla cada materia de forma más extensa y detallada, para así complementar los conocimientos adquiridos a través de las imágenes. La colección Tecnicos de Servicio será, en lo sucesivo, la herramienta más rentable de todo el taller.
