Estimulación Eléctrica Transcutánea y Neuromuscular Julián Maya Martín,Manuel Albornoz Cabello,2010 Tanto la estimulación eléctrica transcutánea (TENS) como la estimulación eléctrica neuromuscular (NMES) son, hoy en día, los dos pilares fundamentales en los que se basa la electroterapia de baja frecuencia. Esta obra pretende convertirse en una guía práctica, tanto para estudiantes como para profesionales, en el uso de este tipo de corrientes, cuyo uso está muy extendido en fisioterapia clínica, deportiva y estética. El objetivo principal de los autores es dar a conocer las características, indicaciones, formas de aplicación y contraindicaciones de las corrientes más empleadas en la electroestimulación muscular y analgesia. Mediante una exposición clara y actualizada según los últimos avances acaecidos en las áreas de la estimulación eléctrica transcutánea y neuromuscular, los autores pretenden contribuir con este libro a la formación de especialistas en este ámbito concreto. La obra incluirá también un CD en el que los autores incluirán una serie de protocolos para asegurar la aplicación correcta de este tipo de herramientas como son las TENS y las NMES, una batería de preguntas de autoevaluación y una selección de resolución de problemas comunes que surgen en la aplicación de la electroterapia.
