Learning and Understanding National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Committee on Programs for Advanced Study of Mathematics and Science in American High Schools,2002-08-06 This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

Degradation of Ascorbic Acid in Different Temperatures. The Influence of Temperature on Vitamin C Maciej Nodzyński,2021-08-27 Scientific Essay from the year 2021 in the subject Chemistry - Food Chemistry, grade: 7 (IB), , language: English, abstract: This paper aims to investigate how different temperatures influence the degradation of vitamin C as well as to clarify the preconception about this vitamin. More specifically, the relationship between the temperature and the concentration of vitamin C will be researched. The research suggests that vitamin C degrades in elevated temperatures so it is highly probable that it also degrades in hot tea and other hot beverages. Consequently, vitamin C is rather not the component of hot tea with lemon juice that provides curative properties, opposite to what many people believe. The subject is important because it extends the knowledge about how vitamin C degrades in different temperatures and how to handle this vitamin properly. The research shows at which temperature vitamin C is most effective and this information could be useful

for pharmaceutical companies when improving the effectiveness and medicinal properties of drugs where vitamin C is the main constituent. The investigation uses the method of redox titration of vitamin C with iodine solution and the detailed information about this process is presented.

Assessing Organizational Performance in Higher Education Barbara A. Miller,2007 The book provides a full complement of assessment technologies that enable leaders to measure and evaluate performance using qualitative and quantitative performance indicators and reference points in each of seven areas of organizational performance. While these technologies are not new, applying them in a comprehensive assessment of the performance of both academic and administrative organization in higher education is a true innovation. **Assessing Organizational Performance in Higher Education** defines four types of assessment user groups, each of which has unique interest in organizational performance. This offers a new perspective on who uses performance results and why they use them. These varied groups emphasize that assessment results must be tailored to fit the needs of specific groups, that “one-size-fits-all” does not apply in assessment. An assessment process must be robust and capable of delivering the right information at the right time to the right user group.
