Time Critical Targeting Concept of Operations (CONOPS) Interactions Sam Waugh, 2011 In this paper, we consider Concept of Operations (CONOPS) for engaging Time Critical Targets (TCTs) and quantify the feasibility of those CONOPS. The process involves defining the scope of the CONOPS, developing a plausible TCT CONOPS based on existing practices, and simulating the dynamics of the CONOPS to obtain a better understanding of the inherent interactions within such a complex, dynamic and concurrent system involving people, sensors, and computational processing. Further, we consider a case study of the undertaking of the complete TCT CONOPS from a Multi-Sensor Command and Control Aircraft (MC2A) and the implications for crew structure. This work should be of interest to those working on TCTs, Command and Control (C2) systems, and surveillance and reconnaissance issues. While the examples presented here are USAF-centric, the techniques proposed should be applicable to a wide range of C2 problems where response time is a critical factor.

*United States Space Command (USSPACECOM). Concept of Operations (CONOPS) For Computer Network Defense (CND).* ,1999 This section provides the purpose of the CND CONOPS, reviews the authority for CONOPS publication and describes the USSPACECOM focus and objectives for the CND mission. In addition, this section provides background information on the threat to U.S. national security and computer networks and a brief overview of the operating environment of the Defense Information Infrastructure (DII). The 1999 Unified Command Plan (UCP) assigns the Commander in Chief, United States Space Command (USCINCSpace) as the military lead for CND and Computer Network Attack (CNA) of DII.

USCINCSpace will assume responsibility for CND beginning 1 October 1999 and for CNA on 1 October 2000. This CONOPS describes how USCINCSpace will execute responsibilities for the CND mission. A separate CNA CONOPS will be published in 2000 detailing USSPACECOM execution of the CNA mission.

*System Analysis, Design, and Development* Charles S. Wasson, 2005-12-13 Written in a practical, easy to understand style, this text provides a step-by-step guide to System Analysis and Engineering by introducing concepts, principles, and practices via a progression of topical, lesson oriented chapters. Each chapter focuses on specific aspects of system analysis, design, and development, and includes definitions of key terms, examples, author's notes, key principles, and challenging exercises that teach readers to apply their knowledge to real world systems. Concepts and methodologies presented can be applied by organizations in business sectors such as transportation, construction, medical, financial, education, aerospace and defense, utilities, government, and others, regardless of size. An excellent undergraduate or graduate-level textbook in systems analysis and engineering, this book is written for both new and experienced professionals who acquire, design, develop, deploy, operate, or support systems, products, or services.

**Concept of Operations (CONOPS) for Foreign Language and Speech Translation Technologies in a Coalition Military Environment**, 2005 This thesis presents Concept of Operations (CONOPS) for two specific automated language translation (ALT) devices, the P2 Phraselator and the Voice Response Translator (VRT). The CONOPS for each device are written as Appendix A and Appendix B respectively. The body of the thesis presents a broad introduction to the present state of ALT technology for the reader who is new to the general subject. It pursues this goal by introducing the human language translation problem followed by nine characteristic descriptors of ALT technology devices to provide a basic comparison framework of existing technologies. The premise is that ALT technology is presently in a state where it is tackled incrementally with various approaches. Two tables are provided that illustrate six commercially available devices using the descriptors. A scenario is then described in which the author observed the two subject ALT devices (depicted in the CONOPS in the Appendices) being employed within an international military exercise. Some unique human observations associated with the use of these devices in the exercise are discussed. A summary is provided of the Department of Defense (DOD) process that is exploring ALT technology devices, specifically the Language and Speech Exploitation Resources (LASER) Advanced Concept Technology Demonstration ACTD.

**Auravana Project Plan** Auravana, 2022-07-12 This publication is the Project Plan for a community-type society. A societal-level project plan describes the organized thinking and execution of a socio-technical environment; the societal structuring of community. This project plan identifies humanity's project to create a global community-type society for the fulfillment of that which everyone has mutually in common. This is a planned project for a configuration of society that may

be tested in its results at optimally meeting all human life requirements at the global scale. This is a planning and work proposal for an open-source, societal-level project. This document describes and explains a unified approach to actions and results that is likely, given what is known and accessible, to improve all of humanity. This is the plan for societal navigation that specifies an approach, direction, and execution to socio-technical life. The project plan has three core sections: (1) Approach to project execution, (2) Direction of project execution, and (3) Execution of project execution. The standard details the complete, plannable information set for the society's operation, including its approach to action, its direction of action, and its execution and adaptation of action. Herein, these concepts, their relationships and understandings, are defined and modeled. Discursive reasoning is provided for this specific configuration of a project plan, as opposed to the selection and encoding of other configurations. A project plan provides for the formalized project-based development operation of a society, organized in time and with available resources, coordinated to become a societal service system for human fulfillment and ecological well-being.

*Guidelines for Developing a Product Line Concept of Operations* Sholom G. Cohen, 1999 This report provides guidelines for an organization that is developing a Concept of Operations (CONOPS) document. A CONOPS document defines the organization's product line approach. The CONOPS document and the decisions made in its preparation will guide the organization as it plans and executes the process of fielding a product line, from product line scoping, through architecture, component development, and product development.

Concept of Operations and the DoD Architecture Framework Nicholas K. James, 2018 This thesis presents a framework for Concept of Operations (ConOps), based on the standards for capturing operations used in the government and industry. An understanding of operations early in system design is critical to the development of effective, successful systems. The current standards for Operational Concepts and the Operational Viewpoint of the Department of Defense Architecture Framework (DoDAF) outline lengthy descriptions that are cumbersome in the early stages of a system's development. The DoDAF Operational Viewpoint was analyzed in depth to distill the important information relevant to operations. This information was built into the System Architecture framework as a bottom-up approach of coordinating the operations of architecture, operators, and context in order to meet system goals. The resulting ConOps definition and framework was then compared against DoDAF Operational Viewpoint diagram samples in a Search and Rescue system case study, in order to validate the framework. The study found that the framework provides a shorter description with more clarity than the DoDAF diagrams.

**Systems Engineering** Derek K. Hitchins, 2008-03-11 This book conceives, presents and exemplifies a contemporary, general systems methodology that is straightforward and accessible, providing guidance in practical application, as well as explaining concept and theory. The book is presented both as a text for students, with topic assignments, and as a reference

for practitioners, through case studies. Utilizing recent research and developments in systems science, methods and tools, Hitchins has developed a unified systems methodology, employable when tackling virtually any problem, from the small technological, to the global socioeconomic. Founded in the powerful 'systems approach', Hitchins' systems methodology brings together both soft and hard system scientific methods into one methodological framework. This can be applied when addressing complex problems, issues and situations, and for creating robust, provable solutions, resolutions and dissolutions to those problems - supposing such to exist. This book details and explores: the systems approach, using theory and method to reveal systems engineering as applied systems science, bridging the gulf between Problem and Solution Spaces; a 'universal' Systems Methodology (including an extensive view of systems engineering, embracing both soft and hard systems) which encompasses all five stages of Hitchins' 5-layer Systems Engineering Model (artifact, project, enterprise, industry and socio-economy); case studies illustrating how the systems methodology may be used to address a diverse range of situations and issues, including conceiving a new defense capability, proposing a feasible way to tackle global warming, tackling enterprise interventions, how and why things can go wrong, and many more. Systems Engineering will give an immeasurable advantage to managers, practitioners and consultants in a wide range of organizations and fields including police, defense, procurement, communications, transport, management, electrical, electronic, aerospace, requirements, software and computer engineering. It is an essential reference for researchers seeking 'systems enlightenment', including graduate students who require a comprehensive reference text on the subject, and also government departments and systems engineering institutions

*The International Civil Operations of Unmanned Aircraft Systems under Air Law* Luis Fernando Fiallos Pazmiño, 2020-12-10 Aviation Law and Policy Series # 19 The incursion of unmanned aircraft systems (UAS) is radically reshaping the future of international civil aviation. As the civil uses of UAS increase and the technology matures in parallel, questions around the associated legal implications remain unanswered, even in such fundamental legal regimes of international civil aviation as airspace, aircraft, international air navigation, international air transport, and safety. This book - the first to consider international law and regulations to cross-border civil flights of UAS - explores current legal and regulatory frameworks from the perspective of how they may facilitate the operations of UAS. The author, a well-known air law practitioner and diplomat, identifies the legal challenges and proposes sound, well-informed measures to tackle those challenges. The book explores comprehensively the means of incorporating UAS within the arena of air law while stimulating further research and debate on the topic. Analysis of the cross-border operations of UAS focuses on aspects relevant to their immediate future, and address such questions as the following: What processes are currently in place? What factors require attention? What aspects particularly influence the future of UAS? Is the current international legal framework adequate to ensure the operation and development of UAS while preserving high levels of safety? How will artificial intelligence impact

the civil operations of UAS? The author's analyses draw on relevant initiatives in existing and proposed Standards and Recommended Practices for the operation of UAS on cross-border flights, as well as States' regulation of UAS within their national airspace. Also described are the main bilateral and multilateral air services and transport agreements with respect to their application to the operation of UAS. Given the escalating need to adopt a comprehensive international regulatory framework for the operation of UAS aimed at facilitating its safe and efficient integration – even as the technology advances and continues to outpace law while the potential for incidents involving UAS grows – this book is well timed to meet the challenge for States and International Civil Aviation Organization and airspace planners. Its innovative approaches to the management of the air traffic safety and security of UAS are sure to influence the development of regulations for civil UAS. The book will be welcomed by aviation regulators, interested international and regional organisations, research organisations, aviation lawyers, and academics in international law and air law.

*Concepts of Operations for a Reusable Launch Vehicle* Michael A. Rampino, 1997 The United States is embarked on a journey toward maturity as a spacefaring nation. One key step along the way is development of a reusable launch vehicle (RLV). The most recent National Space Transportation Policy (August 1994) assigned improvement and evolution of current expendable launch vehicles to the Department of Defense while National Aeronautical Space Administration (NASA) is responsible for working with industry on demonstrating RLV technology. The purpose of this study is to help ensure the US military, especially the USAF, is prepared to take advantage of RLVs should the NASA-led effort to develop an RLV demonstrator prove successful. The focus of this study is an explanation of how the US military could use RLVs, by describing and analyzing two concepts of operations. Four major conclusions resulted from the analysis. First, RLVs have military potential. They can perform a variety of missions including responsive spacelift, reconnaissance, and strike. However, the economic feasibility of using RLVs for earth-to-earth transportation is questionable. Second, design choices for an operational RLV will have effects on risk, cost, capability, and operations efficiency. Trade-offs will have to be made between NASA, commercial, and military requirements if all three parties are to use the same fleet of RLVs. Third, increased investment in propulsion technology development is warranted to ensure success. Fourth, the top priority for the RLV program, even from the military's perspective, should remain cheap and responsive access to space. The research led to three recommendations. First, the US military should become a more active participant in the RLV program to ensure its requirements are defined and incorporated. Second, America should not pursue development of operational RLVs before the technology is ready.

*A Systems Approach to Managing the Complexities of Process Industries* Fabienne-Fariba Salimi, Frederic Salimi, 2017-11-28 A Systems Approach to Managing the Complexities of Process Industries discusses the principles of system engineering, system thinking, complexity thinking and how these apply to the process industry, including benefits and implementation in process safety management systems. The book focuses on the ways system engineering skills, PLM, and

IIoT can radically improve effectiveness of implementation of the process safety management system. Covering lifecycle, megaproject system engineering, and project management issues, this book reviews available tools and software and presents the practical web-based approach of Analysis & Dynamic Evaluation of Project Processes (ADEPP) for system engineering of the process manufacturing development and operation phases. Key solutions proposed include adding complexity management steps in the risk assessment framework of ISO 31000 and utilization of Installation Lifecycle Management. This study of this end-to-end process will help users improve operational excellence and navigate the complexities of managing a chemical or processing plant. - Presents a review of Operational Excellence and Process Safety Management Methods, along with solutions to complexity assessment and management - Provides a comparison of the process manufacturing industry with discrete manufacturing, identifying similarities and areas of customization for process manufacturing - Discusses key solutions for managing the complexities of process manufacturing development and operational phases
