Flocculation Behavior of Full Tailings Zhuen Ruan, 2025-01-27 This book focuses on the flocculation behavior of full tailings, analyzes the influence of multiple factors such as flow field shear on flocculation behavior, constructs a dynamic model of full tailings flocculation behavior, simulates and studies the flocculation behavior of full tailings in the feedwells of deep cone thickener, and optimizes the feeding and internal flocculation parameters. This book can be read by researchers, designers, and engineering technicians related to backfill mining, as well as by teachers and students of mining majors in universities.

Biorefinery of Industrial Effluents for a Sustainable Circular Economy Mu. Naushad, Shamsul Rahman Mohamed Kutty, Sohrab Hossain, Abdullahi Haruna Birniwa, Ahmad Hussaini Jagaba, 2024-11-28 Bio-Refinery of Industrial Effluents for a Sustainable Circular Economy provides a combined approach between environmental engineering, which involves the improvement of the natural environment or remediation of polluted sites. In addition, it discusses bioprocess engineering involving the development of processes for the manufacture of products from biological materials to produce a valuable bioproduct. This book covers knowledge on sources, impacts, and applications of industrial effluents that could potentially be used as feedstock for the IEB with examples of applied research that demonstrates the relationship between the effluents, biorefinery, treatment and bioproduct recovery. Materials that can be produced from IEB and the treatment processes for such are considered. - Provides industrial effluents' source, characteristics, and treatment - Assists in designing an optimization strategy for maximizing efficiency of waste treatment and of bioresource utilization in terms of economic, environmental, and social impact - Explains bio-based product recovery for a bio-based economy - Discusses advanced processes for simultaneous industrial effluents treatment and the generation of bio-based products of sufficient value

Advanced Nanocarbon Polymer Biocomposites Md Rezaur Rahman, Muhammad Khusairy Bin Bakri, 2024-07-26

Nanocarbon polymer biocomposites have gained increased attention from both researchers and manufacturers due to the significant improvement in their physico-mechanical, thermal and barrier properties when compared to conventional materials. Their dimensions, biodegradable character, cost-effectiveness, and sustainability are among the main drivers for increasing demand. However, it is difficult to achieve uniform dispersion between the carbon filler and matrix as it easily forms agglomerations. Production of nanocarbon polymer biocomposites with high mechanical and thermal properties is also limited, but there has been rapid progress in processing possibilities to produce nanocomposites based on various biodegradable fillers. *Advanced Nanocarbon Polymer Biocomposites: Sustainability Towards Zero Biowaste* collects all these novel scientific findings in one place. It discusses in detail their physical, chemical, and electrical properties and presents the latest research findings on nanocarbon polymer biocomposites with filler loadings and their improvement on compatibility. The book will be of great interest for those researchers who are concerned with the production and use of nanocarbon polymer biocomposites as a new innovative advanced material. - Emphasis on nanoscale fillers and their improvement on compatibility - Evaluates the impact of polymer production through life cycle analysis of both single and hybrid polymers and nanocomposites - A strong focus on sustainability and green chemistry perspectives

Optimization of Micro Processes in Fine Particle Agglomeration by Pelleting Flocculation Benjamin Oyegbile, 2016-06-22 Efficient particle separation in order to meet stringent regulatory standards represent one of the biggest challenges facing the process industry operators today. Emerging environmental problems such as climate change, population growth and natural resource depletion make it more compelling to undertake research into alternative phase separation techniques and optimization of existing ones. Meeting this challenge requires innovative, revolutionary and integrated approach in the design and optimization of various unit processes in fine particle separation. Flocculation is widely used as an effective phase separation technique across many process industries such as water and wastewater treatment and in minerals processing. In this work, a new pre-treatment technique was developed using a patented bench scale reactor unit as a technical proof of concept. Furthermore, the book provides a valuable insight into the hydrodynamics and fluid-particle interactions within the agglomeration units. The relatively high solids content of the stable pellets (approximately 30 %) and very low residual turbidity of the post-sedimentation supernatant (7 NTU) clearly demonstrate the potential of this technique. In addition to significantly improving the subsequent solid-liquid separation efficiency, this study also showed that the effluent can be recycled back into the sewer network or utilized for non-portable reuse. The findings obtained from this research will be extremely useful in the scaling up and optimization of the reactor system.

Innovations in Biotechnology for a Sustainable Future Naga Raju Maddela, Luz Cecilia García, 2021-10-23 This contributed volume compiles the latest improvements in the field of biotechnology. It focuses on topics that comprises industrial, environment, agricultural and medical related issues to technology and biological studies and exhibits the

correlation between the biological world and the dependence of humans on it. The book is organized into five parts covering the role of biotechnology in industrial products, environmental remediation, agriculture and pharmacological agents. Ranging from micro-scale studies to macro, it covers a huge domain of agricultural biotechnology and focuses on important commercial crops (e.g. cacao and coffee), arbuscular mycorrhizal fungi, flow and distribution of phosphorus in agricultural soils in the Latin American region. Overall, the book portrays the importance of modern biotechnology and its role in solving the problems in modern day life. The book is a ready reference for practicing students, researchers of environmental engineering, chemical engineering, agricultural engineering, and other allied fields likewise.

Water in Circular Economy Marzena Smol, Majeti Narasimha Vara Prasad, Alexandros I. Stefanakis, 2023-04-01 This book presents possible solutions for a circular economy (CE) in the water and wastewater sector through an inventory of multidisciplinary knowledge with high scientific and practical importance which can contribute to support the transition to the CE model in water and wastewater sector. Water in modern studies exceeds being an important source for irrigation and drinking. It is now a significant source of renewable energy and a catalyst in most industrial and manufacturing products. The protection and sustainable management of water resources and water-based waste (as wastewater, sewage sludge, or sewage sludge ash) are important aspects of the CE, which is defined as a regenerative growth model that gives back to the planet more than it takes. Our book, entitled *Water in Circular Economy*, delivers a comprehensive overview of the latest research covering the following aspects of water management from the perspective of the CE implementation: · Water as a key resource in the circular economy; · Innovative solutions in transition to the circular economy in water and wastewater sector; · Monitoring of circular economy implementation in water and wastewater sector.

Integrated and Hybrid Process Technology for Water and Wastewater Treatment Abdul Wahab Mohammad, Wei Lun Ang, 2021-08-25 Tackling the issue of water and wastewater treatment nowadays requires novel approaches to ensure that sustainable development can be achieved. Water and wastewater treatment should not be seen only as an end-of-pipe solution but instead the approach should be more holistic and lead to a more sustainable process. This requires the integration of various methods/processes to obtain the most optimized design. *Integrated and Hybrid Process Technology for Water and Wastewater Treatment* discusses the state-of-the-art development in integrated and hybrid treatment processes and their applications to the treatment of a vast variety of water and wastewater sources. The approaches taken in this book are categorized as (i) resources recovery and consumption, (ii) optimal performance, (iii) physical and environmental footprints, (iv) zero liquid discharge concept and are (v) regulation-driven. Through these categories, readers will see how such an approach could benefit the water and wastewater industry. Each chapter discusses challenges and prospects of an integrated treatment process in achieving sustainable development. This book serves as a platform to provide ideas and to bridge the gap between laboratory-scale research and practical industry application. - Includes comprehensive coverage on

integrated and hybrid technology for water and wastewater treatment - Takes a new approach in looking at how water and wastewater treatment contributes to sustainable development - Provides future direction of research in sustainable water and wastewater treatment
