Wendy Wheeler

**Tree of Knowledge** Humberto R. Maturana, Francisco J. Varela, 1992 Knowing how we know is the subject of this book. Its authors present a new view of cognition that has important social and ethical implications, for, they assert, the only world we humans can have is the one we create together through the actions of our coexistence. Written for a general audience as well as for students, scholars, and scientists and abundantly illustrated with examples from biology, linguistics, and new social and cultural phenomena, this revised edition includes a new afterword by Dr. Varela, in which he discusses the effect the book has had in the years since its first publication.

**Integral Theory and Transdisciplinary Action Research in Education** Bohac Clarke, Veronika, 2018-12-28 With its growing recognition in education, the importance of Integral Theory is slowly entering mainstream academia through interdisciplinary and transdisciplinary research. Addressing the theory's complexity is important for researchers to learn how to apply it in their classrooms and promote a more inclusive educational environment. Integral Theory and Transdisciplinary Action Research in Education provides emerging research exploring the theoretical and practical aspects of the Integral Theory model and its applications within educational contexts. With a diverse array of research problems approached through an inclusive theory framework and featuring coverage on a broad range of topics such as graduate student research, inclusion culture, and organizational learning processes, this publication is ideally designed for graduate students, educators, academicians, researchers, scholars, educational administrators, and policymakers seeking current research on the utility and promise of Integral Theory as a meta-framework for methodological pluralism and transdisciplinary research.

*Words Made Flesh* Justine Bakker, David Kline, 2025-06-03 The first sustained treatment of religion and religions in the scholarship of a prominent Caribbean thinker Sylvia Wynter is a profoundly transdisciplinary scholar whose works span an impressive array of theory, literature, science, anthropology, philosophy, and religious studies as well as different forms, including essays, plays, a novel, and a 935-page unpublished manuscript entitled "Black Metamorphosis: New Natives in a New World." Whatever the medium, Wynter frequently engages religion as a relevant category of analysis, from reflections on Christianity, Islam, and Rastafarianism to the category and role of religion as a universal aspect of human social

production. Wynter's writings have received enthusiastic attention by scholars in Black studies, Caribbean theory, critical race theory, literature, and philosophy. But until recently little scholarly writing exists that directly engages the topic of religion in her corpus. *Words Made Flesh* seeks to fill this gap by focusing exclusively on religion, religions, and religiosity in her work. Bringing together scholars that provide a wide variety of theoretical perspectives on religion, political theology, social theory, and science studies, this book offers an in-depth engagement with one of the most innovative and important thinkers of the last forty years and illustrates how Wynter's writing has significant implications for the study of religion and religion's relationship to colonialism, race, humanism, science, and political theology.

*Cow Up a Tree* LEARN Group, 2000 Western societies are calling for speedy change in agriculture and the agrifood industries to incorporate new quality criteria into the goods they produce. To promote these changes what scientists must develop are not universally implementable technical solutions, but self-diagnosis methods to be used by agricultural producers and their advisors. They also need to evolve new procedures for research intervention in collective organisations. There is a need for new individual and collective learning and organisation processes based on transdisciplinarity and co-learning among researchers, development professionals, decision makers and farmers. In this book, scientists from ten industrialised countries describe and reflect on their theoretical and practical experience of the different forms of learning they experimented with.

*Unifying Biology* Vassiliki Betty Smocovitis, 1996-12 *Unifying Biology* offers a historical reconstruction of one of the most important yet elusive episodes in the history of modern science: the evolutionary synthesis of the 1930s and 1940s. For more than seventy years after Darwin proposed his theory of evolution, it was hotly debated by biological scientists. It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists. Using methods gleaned from a variety of disciplines, Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences. At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics, they were, according to the author, also working together to establish an autonomous community of evolutionists. Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge. In developing her argument, she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science. Drawing from some of the most exciting recent approaches in science studies and cultural studies, she argues that science is a culture, complete with language, rituals, texts, and practices. *Unifying Biology* offers not only its own new synthesis of the history of modern evolution, but also a new way of doing history.

**The Magic Ring** Piero Mella, 2014-05-06 This book presents a gradual path toward "educating" readers in

understanding how Control Systems truly operate and in recognizing, simulating and improving them in all fields of activity. Starting from the hypothesis that knowledge of Control Systems is not only a technical fact but also represents a discipline – that is, “A discipline is a developmental path for acquiring certain skills or competencies. (...) To practice a discipline is to be a lifelong learner. You “never arrive”; you spend your life mastering disciplines.” (Senge, 2006, p. 10) – Piero Mella has set the objective of making Control Systems a topic that is, in a certain sense, simple and attractive by turning to the effective symbolism typical of Systems Thinking models and avoiding too technical and formal a treatment of the subject. Thus readers should know that this is not an engineering, physics, biology or economics text, nor a mathematics one either. Technical or mathematical tools are not necessary to construct Control Systems; instead the book adopts a highly simple and universal logic behind the notion itself of control process and the simple and universal action of the Control Systems that produce this process. The Magic Ring: Systems Thinking Approach to Control Systems is divided into 10 chapters. Chapter 1 seeks to review the basic language of Systems Thinking and the models it allows us to create, while Chapter 2 introduces the control process, presenting the theoretical structure of four simple Control Systems we all can observe and manage. In Chapter 3 a general typology of Control Systems is proposed with examples taken from observations of reality. The view of Control Systems is broadened in Chapter 4 by introducing two important generalizations: 1. multi lever Control Systems, with levers that are independent or dependent of each other; 2. multi-objective systems, with independent or interdependent objectives. Chapter 5 outlines the guidelines for recognizing, observing or designing Control Systems and presents the problems that arise regarding their logical realization, introducing the fundamental distinction between symptomatic and structural control. Chapters 6-9 undertake a “mental journey” through various “environments”, increasingly broader in scope, suggesting to the reader how to recognize therein Control Systems that, by their ubiquitous presence, make the world possible in all its manifestations. Finally Chapter 10 covers ideas about a Discipline of Control Systems and the human aspects of control.

Laws Of Form: A Fiftieth Anniversary Louis H Kauffman, Fred Cummins, Randolph Dible, Leon Conrad, Graham Ellsbury, Andrew Crompton, Florian Grote, 2023-01-09 Laws of Form is a seminal work in foundations of logic, mathematics and philosophy published by G Spencer-Brown in 1969. The book provides a new point of view on form and the role of distinction, markedness and the absence of distinction (the unmarked state) in the construction of any universe. A conference was held August 8-10, 2019 at the Old Library, Liverpool University, 19 Abercromby Square, L697ZN, UK to celebrate the 50th anniversary of the publication of Laws of Form and to remember George Spencer-Brown, its author. The book is a collection of papers introducing and extending Laws of Form written primarily by people who attended the conference in 2019.

*The Origin of Humanness in the Biology of Love* Humberto R. Maturana, Gerda Verden-Zöller, 2008 The authors' basic question is: How is it that people can live in mutual care, have ethical concerns, and at the same time deny all that through the rational justification of aggression? They answer this basic question indirectly by providing a look into the fundamentals of humans' biological constitution.

*The Origins of Sociable Life: Evolution After Science Studies* Myra J. Hird, 2009-05-29 This ambitious book considers social scientific topics such as identity, community, sexual difference, self, and ecology from a microbial perspective. Harnessing research and evidence from earth systems science and microbiology, and particularly focusing on symbiosis and symbiogenesis, the book argues for the development of a microontology of life.

**Enabling** Stephen Spyropoulos, Stephen Sypropoulos, Theodore Spyropoulos, 2010 Minimaforms, founded in 2002 by Stephen Theodore Spyropoulos, is an experimental architecture and design practice. Using design as a mode of enquiry, the studio explores active forms of systematic play, enabling the everyday to shape and stimulate social and material interaction. This book explores minimaforms.

*The Whole Creature* Wendy Wheeler, 2006 Arguing that humans are, in a fundamental sense, social beings, this book articulates that this can be grasped from understanding the complex social processes of evolution. It shows that through looking at the complex emergence of human society and culture, we can get a better understanding of how 'the whole creature' operates.

Shifting Worlds, Changing Minds Jeremy W. Hayward, 1987-10-12 From the author of *Perceiving Ordinary Magic*, this book proposes that both science and Buddhism offer powerful insights into human nature that can help to bring about profound changes in our lives and our society. Jeremy Hayward argues that a radical uprooting of our beliefs about reality is necessary if we are to resolve our confusion about our world and ourselves. Only a profound examination of human perception—a process by which worlds and selves are created and re-created ever moment—will provide the clarity and confidence we seek. *Shifting Worlds, Changing Minds* is an in-depth, non-technical analysis of the perceptual process,

drawing on the latest data from cognitive science—the new science of mind. Added to these are insights gained from the Buddhist practice of mindfulness-awareness meditation. The results of this analysis and practice can free us from dependence on belief systems. We are presented with a genuine revolution in the understanding of consciousness, and the possibilities for awareness and compassion are revealed.
