Book Summary

Thinking, Fast and Slow Daniel Kahneman, 2011-11-01 NEW YORK TIMES BESTSELLER The guru to the gurus at last shares his knowledge with the rest of us. Nobel laureate Daniel Kahneman's seminal studies in behavioral psychology, behavioral economics, and happiness studies have influenced numerous other authors, including Steven Pinker and Malcolm Gladwell. In *Thinking, Fast and Slow*, Kahneman at last offers his own, first book for the general public. It is a lucid and enlightening summary of his life's work. It will change the way you think about thinking. Two systems drive the way we think and make choices, Kahneman explains: System One is fast, intuitive, and emotional; System Two is slower, more deliberative, and more logical. Examining how both systems function within the mind, Kahneman exposes the extraordinary capabilities as well as the biases of fast thinking and the pervasive influence of intuitive impressions on our thoughts and our choices. Engaging the reader in a lively conversation about how we think, he shows where we can trust our intuitions and how we can tap into the benefits of slow thinking, contrasting the two-system view of the mind with the standard model of the rational economic agent. Kahneman's singularly influential work has transformed cognitive psychology and launched the new fields of behavioral economics and happiness studies. In this path-breaking book, Kahneman shows how the mind works, and offers practical and enlightening insights into how choices are made in both our business and personal lives--and how we can guard against the mental glitches that often get us into trouble.

The first chapter begins with Daniel Kahneman's description of two main characters of the book, neither of which are people. He refers to something that he calls System 1 and System 2. System 1 is dedicated to thinking fast. It almost

solely relies on intuition and almost entirely disregards information. System 1 is in control every time we do an activity that requires quick thinking and reactions. For example, System 1 is in control when we drive, when we want to read other people's facial expressions, when we answer to questions that require quick answers, etc. Kahneman states that System 1 is involuntary and operates entirely on its own. System 2 thinks slowly and always relies on information and almost never on intuition. System 2 is in control when we try to solve difficult math problem, when we want to focus our attention on the voice of person in a room full of people, when we fill in tax forms, or during any other events that are based on awareness.
