

Les 3 Principes Rationnels

John C. Cornelius

Principes Rationnels de la Technique Pianistique Alfred Cortot, 1928

The Pedagogical Writings of Marguerite Long John Ellis, 2024-03-05 Marguerite Long, the most important French female pianist of the 20th century, left her stamp on a whole epoch of musical life in Paris. The Pedagogical Writings of Marguerite Long presents English translations of the two major contributions of Marguerite Long to the literature of piano pedagogy. These translations of her pedagogical works, *Le Piano* and *La Petite Méthode de piano*, provide a window to the old French school of pianism as modernized by Long. *Le Piano* is a remarkable text offering piano playing techniques and pragmatic and philosophical musings and observations about life, musicians, careers, and more. *La Petite Méthode de piano* is a personal manifesto about how to introduce children to music. Both works are treasures revealing Long's lifelong commitment to teaching and they are still stunningly relevant. In addition, John Ellis analyzes each work and puts it in historical context. He places special emphasis on Long's illustrious international career, her teaching, her rivalry with Alfred Cortot, and the impact of sexism on her life and work. Ellis addresses the eclipse of Long's reputation by that of Cortot and fills a gap in the knowledge of Long's place in the history of pedagogical heritage.

Louis Couturat: The History of Modern Symbolic Logic and Other French Manuscripts Oliver Schlaudt, Anne-Francoise Schmid, 2021-09-16 This volume features a critical edition of the recently rediscovered manuscripts written by the French philosopher Louis Couturat (1868-1914). It includes the transcriptions of three of his believed to be lost manuscripts: first the “Cours de Caen: 1898-99” on various systems of symbolic logic, second his lecture at the Collège de France “Histoire de la logique formelle moderne, and third his textbook on mathematical logic. The manuscripts document the early reception of mathematical logic in France and provide insights into the first introduction of the French reader to the work of Gottlob Frege and Bertrand Russell. It is the aim of the editors of this volume to contribute to the history of symbolic logic, particularly the history of its dissemination and its teaching in France. At the same time, the volume contributes to an alternative history and conception of philosophy in which semiotics and concrete mathematical practice stand in focus. The book is interesting for students and researchers in the history of philosophy, mathematics, and logic.

Metaphysics and the Sciences in Nineteenth-Century France ,2025-07-22 This volume is the first systematic study of the style of reasoning specific to the field of philosophy in nineteenth-century France. The chapters analyze the often dispersed responses to the fundamental question of the division of the sciences based on the reciprocal relationships of inclusion or exclusion, of adversity or sorority, between metaphysics and the positive sciences. In line with the arrhythmic progress of the different forms of knowledge, these responses renew the Condillacian criticisms of the Cartesian order of the relationships between metaphysics and physics. Between a pronounced divorce and a successful marriage, this volume traces the philosophical history of the various attempts at divorce or union, which, as the century progressed, resulted in original hybridizations that aspired to define a new and ever-problematic "French philosophy."
