**Ecological Building Materials for Deserts and Drylands** Daniela A. Ottmann, 2022-02-14 This book examines prospective climate adaptive building materials in desert and drylands in the context of climate change, desertification, urbanisation demands, and the consequent sustainable urban development challenges. This preliminary collection of ecological materials covers the characterisation of biotic and abiotic resources for materials, their specifications and benefits for adequate bio-climatic design and construction. Particular emphasis is given to ecological composite materials for advances in desert architecture. Based on the initial collection, the book culminates with potentials for new ecological building materials. The eComposite Combinator matrix offers potential research recipes and encourages the reader to conduct further climate-matters related research.

**Emergency Sandbag Shelter and Eco-Village** Nader Khalili, 2008 This book ... shows how to use sandbags and barbed wire, the materials of war, for peaceful purposes as the new invention known as Superadobe or earth-bag, which can shelter millions of people around the globe as a temporary as well as permanent housing solution. This affordable, self-help, sustainable, and disaster resistant structural system is a spin off from Khalili's presentation to NASA for habitat on the moon and Mars, which successfully passed rigorous tests for strict California earthquake building codes.--Amazon.com.

*Intelligent Autonomous Systems 13* Emanuele Menegatti, Nathan Michael, Karsten Berns, Hiroaki Yamaguchi, 2015-09-03 This book describes the latest research accomplishments, innovations, and visions in the field of robotics as presented at the 13th International Conference on Intelligent Autonomous Systems (IAS), held in Padua in July 2014, by leading researchers, engineers, and practitioners from across the world. The contents amply confirm that robots, machines, and systems are rapidly achieving intelligence and autonomy, mastering more and more capabilities such as mobility and manipulation, sensing and perception, reasoning, and decision making. A wide range of research results and applications are covered, and particular attention is paid to the emerging role of autonomous robots and intelligent systems in industrial production, which reflects their maturity and robustness. The contributions have been selected through a rigorous peer-review process and contain many exciting and visionary ideas that will further galvanize the research community, spurring novel research directions. The series of biennial IAS conferences commenced in 1986 and represents a premiere event in robotics.

**Ecologies of Inception** Simone Ferracina, 2022-05-30 Responding to increasing levels of planetary pollution, waste generation, carbon dioxide emission and environmental collapse, *Ecologies of Inception* re-thinks potentiality—an object's ability to change—in architecture and design. The book problematizes the still-prevailing modern paradigm of design practice: the technical tabula rasa, a tendency to begin from scratch and use raw, amorphous, and obedient materials that can be easily and effectively manipulated, facilitating a seamless and faithful embodiment of intentions. Instead, the philosophy of design developed in the text prompts—through a variety of case studies, thinkers, and disciplines—a collective reconsideration of value, dissociating it from the projects and signatures of any one author or generation. Whereas the merits of up-cycling and circular design are canonically defined vis-à-vis status-quo economic and socio-cultural orthodoxies, this project unpacks the theoretical assumptions that underpin these practices, showing that they perpetuate the same biases and exclusions that generate waste in the first place. As an alternative, the book introduces a nodal and exaptive paradigm for design: a conceptual and methodological toolset for engaging the durational and anthropocenic materiality of the third millennium, and for radically prioritizing practices of maintenance, reuse, care, and co-option. This approach, which is inspired by (and builds upon) evolutionary biology, technological disobedience, queer use, adaptive reuse, experimental preservation, and improvisational practices such as collage, adhocism, bricolage, and kit-bashing, refuses to reduce pre-

existing material substrates to abstract lists of properties or featureless lumps, encountering them on their own terms—as situated individuals and co-authors. Ecologies of Inception will appeal to undergraduate and postgraduate students, educators, and professional architects and designers interested in sustainable design and seeking to develop conceptual and design tools commensurate with the magnitude and urgency of the climate emergency.

**Ceramic Houses and Earth Architecture** Nader Khalili, 1996 Khalili's classic, authoritative manual describes how to build arches, domes, and vaults with earth, as well as techniques to fire and glaze earth buildings to transform them into ceramic houses. This newly revised edition also provides insight into the latest response by building officials to Superadobe or earthbag technology (structures of sandbags and barbed wire), a patented system that is free for the owner-builder and licensed for commercial use. Nader Khalili's ideas on ceramic houses and earth architecture have been published by NASA and utilized by the United Nations, and have passed building and safety tests in California. This new edition is now in its fifth printing.
