**Karen Laslie Davidson**

Environmental Public Health Impacts of Disasters Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Environmental Health Sciences, Research, and Medicine, 2007-06-13 Public health officials have the traditional responsibilities of protecting the food supply, safeguarding against communicable disease, and ensuring safe and healthful conditions for the population. Beyond this, public health today is challenged in a way that it has never been before. Starting with the 9/11 terrorist attacks, public health officers have had to spend significant amounts of time addressing the threat of terrorism to human health. Hurricane Katrina was an unprecedented disaster for the United States. During the first weeks, the enormity of the event and the sheer response needs for public health became apparent. The tragic loss of human life overshadowed the ongoing social and economic disruption in a region that was already economically depressed. Hurricane Katrina reemphasized to the public and to policy makers the importance of addressing long-term needs after a disaster. On October 20, 2005, the Institute of Medicine's Roundtable on Environmental Health Sciences, Research, and Medicine held a workshop which convened members of the scientific community to highlight the status of the recovery effort, consider the ongoing challenges in the midst of a disaster, and facilitate scientific dialogue about the impacts of Hurricane Katrina on people's health. Environmental Public Health Impacts of Disasters: Hurricane Katrina is the summary of this workshop. This report will inform the public health, first responder, and scientific communities on how the affected community can be helped in both the midterm and the near future. In addition, the report can provide guidance on how to use the information gathered about environmental health during a disaster to prepare for future events.

Race, Place, and Environmental Justice After Hurricane Katrina Robert D. Bullard, Beverly Wright, 2009-02-10 Analyzing the immediate and long-term repercussions of Hurricane Katrina, the essays in this volume expose the racial disparities that exist in disaster response and recovery and challenge the geography of vulnerability

**Hurricane Katrina** United States Government Accountability Office, 2017-09-15 In 2005, Hurricane Katrina's impact on the Gulf Coast included damage to the environment from chemical and hazardous materials releases. Also, the widespread demolition and renovation activities still under way in New Orleans may release asbestos fibers into the air, posing a potential additional health risk. This report, conducted at the Comptroller General's initiative, addresses (1) the Environmental Protection Agency's (EPA) actions to assess and mitigate Katrina's environmental impacts, (2) the extent to

which EPA has assurance that public health is protected from asbestos inhalation risks in New Orleans, (3) the extent to which EPA's environmental health risk communications provided useful information to the public, and (4) challenges EPA faces in addressing environmental impacts.

**Potential Impacts of Climate Change on U.S. Transportation** Division on Earth and Life Studies, Transportation Research Board, 2008-07-16 The Transportation Research Board (TRB) and the Division on Earth and Life Studies (DELS) have released the pre-publication version of TRB Special Report 290, *The Potential Impacts of Climate Change on U.S. Transportation*, which explores the consequences of climate change for U.S. transportation infrastructure and operations. The report provides an overview of the scientific consensus on the current and future climate changes of particular relevance to U.S. transportation, including the limits of present scientific understanding as to their precise timing, magnitude, and geographic location; identifies potential impacts on U.S. transportation and adaptation options; and offers recommendations for both research and actions that can be taken to prepare for climate change. The book also summarizes previous work on strategies for reducing transportation-related emissions of carbon dioxide--the primary greenhouse gas--that contribute to climate change. Five commissioned papers used by the committee to help develop the report, a summary of the report, and a National Academies press release associated with the report are available online. DELS, like TRB, is a division of the National Academies, which include the National Academy of Sciences, National Academy of Engineering, Institute of Medicine, and National Research Council.

*Facing Catastrophe* Robert R. M. Verchick, 2012-04-02 As Hurricane Katrina vividly revealed, disaster policy in the United States is broken and needs reform. What can we learn from past disasters--storms, floods, earthquakes, tsunamis, landslides, and wildfires--about preparing for and responding to future catastrophes? How can these lessons be applied in a future threatened by climate change? In this bold contribution to environmental law, Robert Verchick argues for a new perspective on disaster law that is based on the principles of environmental protection. His prescription boils down to three simple commands: Go Green, Be Fair, and Keep Safe. "Going green" means minimizing exposure to hazards by preserving natural buffers and integrating those buffers into artificial systems like levees or seawalls. "Being fair" means looking after public health, safety, and the environment without increasing personal and social vulnerabilities. "Keeping safe" means a more cautionary approach when confronting disaster risks. Verchick argues that government must assume a stronger regulatory role in managing natural infrastructure, distributional fairness, and public risk. He proposes changes to the federal statutes governing environmental impact assessments, wetlands development, air emissions, and flood control, among others. Making a strong case for more transparent governmental decision-making, Verchick offers a new vision of disaster law for the next generation.

International Perspectives on Global Environmental Change Stephen Young, Steven Silvern, 2012-02-03 Environmental change is increasingly considered a critical topic for researchers across multiple disciplines, as well as policy makers throughout the world. Mounting evidence shows that environments in every part of the globe are undergoing tremendous human-induced change. Population growth, urbanization and the expansion of the global economy are putting increasing pressure on ecosystems around the planet. To understand the causes and consequences of environmental change, the contributors to this book employ spatial and non-spatial data, diverse theoretical perspectives and cutting edge research tools such as GIS, remote sensing and other relevant technologies. International Perspectives on Global Environmental Change brings together research from around the world to explore the complexities of contemporary, and historical environmental change. As an InTech open source publication current and cutting edge research methodologies and research results are quickly published for the academic policy-making communities. Dimensions of environmental change explored in this volume include: Climate change Historical environmental change Biological responses to environmental change Land use and land cover change Policy and management for environmental change

Rebuilding Urban Places After Disaster Eugenie Ladner Birch, Susan Wachter, 2006 This volume examines the rebuilding of cities and their environs after a disaster and focuses on four major issues: making cities less vulnerable to disaster, reestablishing economic viability, responding to the permanent needs of the displaced, and recreating a sense of place.

*Race, Place, and Environmental Justice After Hurricane Katrina* Robert D. Bullard, Beverly Wright, 2010-06 On August 29, 2005, Hurricane Katrina made landfall near New Orleans leaving death and destruction across the Louisiana, Mississippi, and Alabama Gulf Coast counties. The lethargic and inept emergency response that followed exposed institutional flaws, poor planning, and false assumptions that are built into the emergency response and homeland security plans and programs. Questions linger: What went wrong? Can it happen again? Is our government equipped to plan for, mitigate, respond to, and recover from natural and manmade disasters? Can the public trust government response to be fair? Does race matter? Racial disparities exist in disaster response, cleanup, rebuilding, reconstruction, and recovery. Race plays out in natural disaster survivors' ability to rebuild, replace infrastructure, obtain loans, and locate temporary and permanent housing. Generally, low-income and people of color disaster victims spend more time in temporary housing, shelters, trailers, mobile homes, and hotels - and are more vulnerable to permanent displacement. Some "temporary" homes have not proved to be that temporary. In exploring the geography of vulnerability, this book asks why some communities get left behind economically,

spatially, and physically before and after disasters strike.

**Climate Change 2014 - Impacts, Adaptation and Vulnerability: Global and Sectoral Aspects** Christopher B. Field, Vicente R. Barros, 2014-12-29 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) will again form the standard reference for all those concerned with climate change and its consequences, including students, researchers and policy makers in environmental science, meteorology, climatology, biology, ecology, atmospheric chemistry and environmental policy.

**Climate Change 2007 - Impacts, Adaptation and Vulnerability** Intergovernmental Panel on Climate Change. Working Group II., 2007 The Climate Change 2007 volumes of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) provide the most comprehensive and balanced assessment of climate change available. This IPCC Working Group II volume provides a completely up-to-date scientific assessment of the impacts of climate change, the vulnerability of natural and human environments, and the potential for response through adaptation. Written by the world's leading experts, the IPCC volumes will again prove to be invaluable for researchers, students, and policymakers, and will form the standard reference works for policy decisions for government and industry worldwide.

Integrating the Environment in Urban Planning and Management David Dodman, Gordon McGranahan, D. Barry Dalal-Clayton, International Institute for Environment and Development, 2013 This publication is intended to encourage and support urban decision-makers as it recognizes that action taken in towns and cities is essential for addressing global environmental problems, and with an increasing proportion of the world's population living in urban areas in low- and middle-income countries, these are important sites for engaging with the environment. Recognizing the increasing role of cities, it builds on the 2007 report, *Liveable Cities: the benefits of urban environmental planning*. Since the launch of the *Liveable Cities* report in 2007, cities have become increasingly prominent in terms of addressing global environmental issues. Much of this has been around climate change, with the expansion of initiatives such as the C40 Cities Climate Leadership Group, the launch of the Carbon Cities Climate Registry in 2010, and the initiation of the Durban Adaptation Charter in 2011.

**Environmental health needs & habitability assessment Hurricane Katrina response : initial assessment**, 2005 This report provides an initial assessment of the overarching environmental health and infrastructure issues faced by New Orleans to reinhabit the city. It was prepared by a joint taskforce of the Centers for Disease Control and Prevention (CDC) in the Department of Health and Human Services (DHHS) and the U.S. Environmental Protection Agency (EPA).

Environmental Science Eldon D. Enger, Bradley F. Smith, 2009-02-18 This full-color, introductory environmental science text is known for being concise, conceptual, and value-priced. The approach and reading level cover the basic concepts without overloading students with too much detail. The authors reinforce the text's central theme of interrelationships by

providing a historical perspective, information on economic and political realities, discuss the role of different social experiences, and integrate this with the crucial science to describe the natural world and how we affect it.

**Hurricane Katrina** Danny Reible, 2008 The flooding of New Orleans by Hurricane Katrina provides many lessons for the environmental and engineering communities and raises public policy questions about risk management. Although serious environmental and waste management issues were expected as a result of the flooding, extensive environmental sampling largely failed to substantiate them. The attention of those managing the emergency was diverted from critical issues to addressing this area of public apprehension. The potential environmental consequences were of concern because many chemical plants, petroleum facilities, and contaminated sites, including Superfund sites, in the area were covered by floodwaters. In addition, hundreds of commercial establishments, such as service stations, pest control businesses, and dry cleaners, use potentially hazardous chemicals that may have been released into the environment. The potential sources of toxics and environmental contaminants include metal-contaminated soils typical of old urban areas. Compounding these concerns is the presence of hazardous chemicals commonly stored in households and the fuel and motor oil in approximately 350,000 flooded automobiles. Uncontrolled biological wastes from human and animal sources also contributed to the pollutant burden. By and large, however, the environmental problems in the city are not significantly different now from environmental conditions before Hurricane Katrina. This discussion focuses on successes and failures in responding to the environmental concerns and on lessons learned for future disasters.
