Stainless Steels Joseph R. Davis, 1994-01-01 ASM Specialty Handbook® Stainless Steels The best single-volume reference on the metallurgy, selection, processing, performance, and evaluation of stainless steels, incorporating essential information culled from across the ASM Handbook series. Includes additional data and reference information carefully selected and adapted from other authoritative ASM sources.

Thermal Conductivity of 304 Stainless Steel and U-11.4 Wt {percent} Zr Alloy Between 600 and 1200 K. , 1988 Thermal conductivities of 304 stainless steel (72.84 wt % Fe, 8.16 wt % Ni, 18.00 wt % Cr) and U-Zr alloy (88.11 wt % U, 11.36 wt % Zr) were determined using a comparative method. An austenitic stainless steel standard (NBS) was used for the thermal conductivity measurements of SS304, which in turn served as a secondary standard for the U-Zr measurements. The data for SS304 showed a well-defined break in the conductivity curve at 987K, which is probably indicative of the $[\gamma]$ - $([\alpha] + [\gamma])$ boundary in the Fe-Ni-Cr phase diagram. Linear fits for the two segments of the curve yielded the following equations: $[\lambda](W m^{-1} K^{-1}) = 14.129 + 1.1759 \times 10^{-2} T$ (675

Wear of Materials Peter J. Blau, 2003-10 The 14th International Conference on Wear of Materials took place in Washington, DC, USA, 30 March - 3 April 2003. These proceedings contain over two-hundred peer reviewed papers containing the best research, technical developments and engineering case studies from around the world. Biomaterials and nano-tribology receive special attention in this collection reflecting the general trends in the field. Further highlights include a focus on the new generation of instrumentation to probe wear at increasingly small scales. Approximately ninety communications and case studies, a popular format for the academic community have also been included, enabling the inclusion of the most up-to-date research. Over 200 peer-reviewed papers including hot topics such as biomaterials and nano-tribology Keeping you up-to-date with the latest research from leading experts Includes communications and case studies

Thermal Conductivity 18 T. Ashworth, David R. Smith, 2012-12-06 The International Thermal Conductivity Conference was started in 1961 with the initiative of Mr. Charles F. Lucks, who passed away on 8 July 1982 and to the memory of whom this volume is dedicated. These Conferences on thermal conductivity grew out of the needs of researchers in the field. The

Conferences were held annually from 1961 to 1973 and have been held biennially since 1975 when our Center for Information and Numerical Data Analysis and Synthesis (CINDAS) of Purdue University became the Permanent Sponsor of the Conferences. These Conferences provide a broadly based forum for researchers actively working on the thermal conductivity and closely related properties to convene on a regular basis to exchange their ideas and experiences and report their findings and results. The Conferences have been self-perpetuating and are an example of how a technical community with a common purpose can transcend the invisible, artificial barriers between disciplines and gather together in increasing numbers without the need of national publicity and continuing funding support, when they see something worthwhile going on. It is believed that this series of Conferences not only will grow stronger, but will set an example for researchers in other fields on how to jointly attack their own problem areas.

Thermal Conductivity of British, French, and West German Stainless Steels R. H. Bogaard, 1983 This report reviews and presents the numerical data and technical information for the thermal conductivity of 17 British, 2 French, and 35 West German stainless steels. A number of these steels have AISI equivalent steels, in which case an expanded data and information base becomes available. The data and information, including material composition and thermal conditioning treatments, is critically evaluated and analyzed, resulting in the generation of recommended values for the thermal conductivity. (Author).

Thermal Conductivity of Commercially Available 21-6-9 Stainless Steel, 1993 Thermal conductivity values of 21-6-9 stainless steel over the temperature range of 5 K to 120 K are reported. Thermal conductivity integrals are measured using a steady-state heat flux method. The resulting data are fit with a polynomial and differentiated to obtain the conductivity. The derived conductivity is compared to published data for high-manganese stainless steels and to data for other stainless steels. A discussion of the methodology and its accuracy is included.
