Computer Animation Rick Parent, 2007-11-01 Driven by the demands of research and the entertainment industry, the techniques of animation are pushed to render increasingly complex objects with ever-greater life-like appearance and motion. This rapid progression of knowledge and technique impacts professional developers, as well as students. Developers must maintain their understanding of conceptual foundations, while their animation tools become ever more complex and specialized. The second edition of Rick Parent's Computer Animation is an excellent resource for the designers who must meet this challenge. The first edition established its reputation as the best technically oriented animation text. This new edition focuses on the many recent developments in animation technology, including fluid animation, human figure animation, and soft body animation. The new edition revises and expands coverage of topics such as quaternions, natural phenomenon, facial animation, and inverse kinematics. The book includes up-to-date discussions of Maya scripting and the Maya C++ API, programming on real-time 3D graphics hardware, collision detection, motion capture, and motion capture data processing. - New up-to-the-moment coverage of hot topics like real-time 3D graphics, collision detection, fluid and soft-body animation and more! - Companion site with animation clips drawn from research & entertainment and code samples - Describes the mathematical and algorithmic foundations of animation that provide the animator with a deep understanding and control of technique

**Victorian Interdisciplinarity and the Sciences** Bernard Lightman, Efram Sera-Shriar, 2024-05-14 The specialization thesis—the idea that nineteenth-century science fragmented into separate forms of knowledge that led to the creation of modern disciplines—has played an integral role in the way historians have described the changing disciplinary map of nineteenth-century British science. This volume critically reevaluates this dominant narrative in the historiography. While new disciplines did emerge during the nineteenth century, the intellectual landscape was far muddier, and in many cases new forms of specialist knowledge continued to cross boundaries while integrating ideas from other areas of study. Through

a history of Victorian interdisciplinarity, this volume offers a more complicated and innovative analysis of discipline formation. Harnessing the techniques of cultural and intellectual history, studies of visual culture, Victorian studies, and literary studies, contributors break out of subject-based silos, exposing the tension between the rhetorical push for specialization and the actual practice of knowledge sharing across disciplines during the nineteenth century.
