**Foundation Analysis and Design** Joseph E. Bowles,1997 The revision of this best-selling text for a junior/senior course in Foundation Analysis and Design now includes an IBM computer disk containing 16 compiled programs together with the data sets used to produce the output sheets, as well as new material on sloping ground, pile and pile group analysis, and procedures for an improved analysis of lateral piles. Bearing capacity analysis has been substantially revised for footings with horizontal as well as vertical loads. Footing design for overturning now incorporates the use of the same uniform linear pressure concept used in ascertaining the bearing capacity. Increased emphasis is placed on geotextiles for retaining walls and soil nailing.

Detailing the structural systems most widely used today—heavy timber framing, wood platform framing, masonry loadbearing wall, structural steel framing, and concrete framing systems—the book describes each system's historical development, how the major material is obtained and processed, tools and working methods, as well as each system's relative merits. Designed as a primer to building basics, the book features a list of key terms and concepts, review questions and exercises, as well as hundreds of drawings and photographs, illustrating the materials and methods described. 1990 (0 471-50911-6) 803 pp.

The Eighth Edition details the impact of computers, data processing, and telecommunications on building system design; the effects of new, stringent energy codes on building systems; and computer calculation techniques as applied to daylighting and electric lighting design. As did earlier editions, the book provides the basic theory and design guidelines for both systems and equipment, in everything from heating and cooling, water and waste, fire and fire protection systems, lighting and electrical wiring, plumbing, elevators and escalators, acoustics, and more. Thoroughly illustrated, the book is a basic primer on making comfort and resource efficiency integral to the design standard. 1991 (0 471-52502-2) 1,664 pp.

*Soil Properties Evaluation from Centrifugal Models and Field Performance* Frank C. Townsend, 1988 Proceedings of a session at the ASCE National Convention, held in Nashville, Tennessee, May 10, 1988. Sponsored by the Geotechnical Engineering Division of ASCE. This Geotechnical Special Publication contains eight papers on the evaluation of soil property values. The performance of geotechnical projects is dependent upon the appropriateness of the design theory to the boundary conditions and the characterization of the soil properties used in the theory. These papers assess the reliance of soil property values as verified by field or centrifugal model observations. The papers on centrifugal modeling examine slope stability assessment due to phreatic surface elevations and surcharge loadings on the slope crest. Centrifugal modeling was also used to evaluate settlements and capacities of shallow footings and large deformation consolidation of waste clays. Field performance papers discuss pile load test verification of designs based upon in situ tests. In addition, in situ tests were used to characterize seismic resistance, while visual observations evaluated braced cut performance.
