BIM for Design Coordination Fernanda L. Leite, 2019-11-05 A tactical guide to successful Virtual Design and Construction project coordination, featuring case studies from leading VDC firms. Virtual Design Coordination (VDC) employs information-rich Building Information Modeling (BIM) to enable specialty designers and contractors to create a single, coordinated set of designs that can prevent cost overruns, avoid schedule delays, and identify issues in the field. Although BIM-based design coordination is widely used in the commercial construction industry, there remains a need for a standardized practice. BIM for Design Coordination formalizes industry best practices and provides structured guidelines to the process. Helping readers gain the benefits of BIM-based design coordination, this practical guide covers areas such as setting up a project for success, model quality impacts on design coordination, carrying out a successful VDC session, and more. Specific guidelines for various project stakeholders are laid out in detail, while real-world examples of project design coordination workflows and templates for BIM Project Execution Plans (PxPs) are provided throughout the text. Written by a leading expert and educator in the field, this book: Provides a formal set of BIM-based design coordination guidelines that emphasize construction-stage coordination Features real-life case studies that illustrate how leading firms approach design coordination Covers BIM-based design coordination in other industries, such as infrastructure and industrial sectors Presents guidelines for all project stakeholders, including subcontractors, architects, engineers, fabricators, and owners Includes chapters on teaching BIM-based design coordination and the future of the field BIM for Design Coordination: A Virtual Design and Construction Guide for Designers, General Contractors, and MEP Subcontractors is a much-needed resource for general contractors and members of VDC teams, as well as academics, students, and professionals new to BIM-based design coordination.

Modern Methods in High School Teaching Harl Roy Douglass, 1926 This volume addresses teachers and principals, presenting a comprehensive treatment of the methods of teaching in high schools. The author assumes a familiarity on the part of his readers with the nature of the learning process, adolescence, and the psychological foundations of interests and motives as they relate to whole-hearted pupil activity. The fundamentals of both theory and practice are set forth, and an attempt has been made to outline and describe the newer types of procedure, which are being employed in different subjects in the best secondary schools. Throughout the volume the attempt has been made clearly to represent practices rather than to advocate their adoption. The reader is permitted to draw his own conclusions. The book will appeal to the type of reader who wants to be intelligent about what is going on in high-school teaching.
