Irving Settel,William Laas

The Box Jeff Kesseloff,1995 Here are household names and fascinating unknowns, from the brilliant RCA scientists, flying paper airplanes off the top of the Empire State Building, to Uncle Miltie, Rod Steiger, Imogene Coca, Studs Terkel, Edward R. Murrow, and Paddy Chayefsky. Go behind the scenes of many of television's classic shows and learn whether Father really did know best, and laugh at the hilarious low-budget antics of Captain Video (remember the opticon scillometer?).

The History of Television, 1880 to 1941 Albert Abramson,2009-01-15 No other technological innovation can be cited whose impact on the fabric of daily living has been as pervasive as that of television. A sole inventor does not exist; television came about through the remarkable interactions of several hundred scientists. Interviews with these scientists, extensive archival research worldwide, and rare photos make this book--and its following volume--the one definitive history and the only authoritative account. Herein are the early inventions, the first devices, early camera tubes, the mechanical era, the kinescope, the iconoscope, and more. There are very extensive references.

Television R. W. Burns,1998 This book presents a balanced, thorough history of television to 1940, considering the factors technical, financial and social which influenced and led to the establishment of many of the world's high-definition TV broadcasting services. This is a major book in the study of history of science, technology and media.

Television Anthony Smith,Richard Paterson,1998 From its earliest beginnings, television was destined to become one of the great new forces at work in the twentieth century. This new edition (which includes six completely new chapters) greatly expands the original and unique historical coverage of this most influential cultural phenomenon. Written by a distinguished international team of specialists, the book describes the history of television from its technical conception in the nineteenth century right through to the bewildering multi-media developments of the present. Alongside this historical account, chapters provide important discussion of the central debates affecting television world-wide, from America, Canada, and Britain to

Europe, Scandinavia, Japan, China, South Asia, the Arab world, Australia, Africa, and the Third World. All genres of programme making--news, sport, drama, comedy--are examined in the light of key questions: how viewing practices affect particular societies; how standards of taste and decency are arrived at; the influence of television of government power; the role of public service broadcasting; and the relationship of television to terrorism and violence. A thought-provoking Epilogue ponders the likely impact and influence of television in the coming years. This book is accessibly written and is a major exploration of the world's most dominant medium. QUOTES FROM THE FIRST EDITION 'Those who wish to take a close look at the way television has affected the lives of people in other countries as well as their own will find all the information they need here . . . a work which will earn its keep in the reference libraries, but also merits a place on the bookshelves of individuals.' THES 'For those desiring to fully understand the medium that has dominated the later twentieth century.' The Business of Film 'What a terrific assembly of contributors to document an international story of television . . . so many outstanding features in this book . . . an important addition to documenting the global story of television in a single volume.'

Television Talk Bernard M. Timberg,Robert J. Erler,2010-01-01 A CHOICE Outstanding Academic Book Flip through the channels at any hour of the day or night, and a television talk show is almost certainly on. Whether it offers late-night entertainment with David Letterman, share-your-pain empathy with Oprah Winfrey, trash talk with Jerry Springer, or intellectual give-and-take with Bill Moyers, the talk show is one of television's most popular and enduring formats, with a history as old as the medium itself. Bernard Timberg here offers a comprehensive history of the first fifty years of television talk, replete with memorable moments from a wide range of classic talk shows, as well as many of today's most popular programs. Dividing the history into five eras, he shows how the evolution of the television talk show is connected to both broad patterns in American culture and the economic, regulatory, technological, and social history of the broadcasting industry. Robert Erler's A Guide to Television Talk complements the text with an extensive who's who listing of important people and programs in the history of television talk.

The History of Television, 1997

Television Histories Gary Richard Edgerton, Peter C. Rollins, 2001-01-01 From Ken Burns's documentaries to historical dramas such as *Roots*, from A&E's Biography series to CNN, television has become the primary source for historical information for tens of millions of Americans today. Why has television become such a respected authority? What falsehoods enter our collective memory as truths? How is one to know what is real and what is imagined—or ignored—by producers, directors, or writers? Gary Edgerton and Peter Rollins have collected a group of essays that answer these and many other questions. The contributors examine the full spectrum of historical genres, but also institutions such as the History Channel and production histories of such series as *The Jack Benny Show*, which ran for fifteen years. The authors explore the tensions between popular history and professional history, and the tendency of some academics to declare the past "off limits" to nonscholars. Several of them point to the tendency for television histories to embed current concerns and priorities within the past, as in such popular shows as *Quantum Leap* and *Dr. Quinn, Medicine Woman*. The result is an insightful portrayal of the power television possesses to influence our culture.

The History of Television Richard Marschall, Rick Marschall, 1986

The Historian, Television and Television History Graham Roberts, Philip M. Taylor, Nicholas Pronay, 2001 The collected essays in this book arose out of the groundbreaking conference of the International Association of Media and History, which brought together key academics and program makers from around the world involved in history and television, including Nicholas Pronay, Pierre Sorlin, and Taylor Downing. These essays offer a dialogue between academics and media practitioners that covers archival access, analyses of how different TV systems have represented themselves, case studies, and the future of television. Philip M. Taylor is a professor of international communications and the director of the Institute of Communications at the University of Leeds. Graham Roberts is a lecturer in communications arts at the University of Leeds.

The History of Television, 1942 to 2000 Albert Abramson, 2007-09-29 Albert Abramson published (with McFarland) in 1987 a landmark volume titled *The History of Television, 1880-1941* (massive...research--Library Journal; voluminous documentation--Choice; many striking old photos--The TV Collector). At last he has produced the follow-up volume; the reader may be assured there is no other book in any language that is remotely comparable to it. Together, these two volumes provide the definitive technical history of the medium. Upon the development in the mid-1940s of new cameras and picture tubes that made commercial television possible worldwide, the medium rose rapidly to prominence. Perhaps even more important was the invention of the video tape recorder in 1956, allowing editing, re-shooting and rebroadcasting. This second

volume, 1942 to 2000 covers these significant developments and much more. Chapters are devoted to television during World War II and the postwar era, the development of color television, Ampex Corporation's contributions, television in Europe, the change from helical to high band technology, solid state cameras, the television coverage of Apollo II, the rise of electronic journalism, television entering the studios, the introduction of the camcorder, the demise of RCA at the hands of GE, the domination of Sony and Matsushita, and the future of television in e-cinema and the 1080 P24 format. The book is heavily illustrated (as is the first volume).

The Great Television Race Joseph H. Udelson, 1989-06 Normal 0 false false false MicrosoftInternetExplorer4 Television was first successfully demonstrated in 1925; and in 1941 the Federal Communications Commission authorized commercial telecasting in the United States. During the intervening sixteen years the technology of television had been revolutionized, and there had been created an integrated television system. These developments were accomplished amid intense engineering and corporate rivalries of international scope. The result of this competition was the formation of the American television industry composed of three distinct systems: the engineering, the programming, and the promotional. The industry had already reached maturity by the eve of the Second World War, and only the world-wide wartime disruptions prevented its immediate marketing. The author has utilized a broad range of original sources in order to trace the American television industry from its inception until its commercialization. He demonstrates that the present monochromatic television standards, programming potentials, networking requirements, commercial promotion, and audience research have been the results of incremental achievements accomplished prior to America's entry into World War II. He analyzes the engineering processes and describes the corporate jockeying for position in the infant industry; and he demonstrates the prominent role played by the federal government in the history of the entire enterprise.

The Joy of Sets Chris Horrocks, 2017-12-22 It is a modern activity, one of the primary ways we consume information and entertainment, something we'll do over dinner, at a bar, or even standing on the street peering into a store window—watch TV. Many of us spend countless hours in front of the tube, and even those of us who have proudly eliminated it from our lives can probably still rattle off the names of today's most popular shows. But for as crucial as television viewing is in modern culture, the television set itself, as a ubiquitous object in our environment, rarely captures our attention—turn one off and it seems to all but disappear. In this book, Chris Horrocks tells the story of the television set, exploring its contradictory presence in our lives as both a material object and a conveyor of illusory images. Horrocks begins in the nineteenth century and television's prehistory as a fantastic, futuristic concept. He follows the television's journey from its strange roots in spiritualism, imperialism, and Victorian experiments in electro-magnetism to the contested accounts of its actual invention, looking at the work of engineering pioneers such as Philo Farnsworth and John Logie Baird. Unboxing sets all across the world, he details how it arrived as an essential consumer product and began to play an extraordinary role as a bridge

between public and private life. Horrocks describes how the console and cabinet themselves expressed status and good taste and how their designs drew on cultural phenomena such as the space race and the avant-garde. He discusses how we have both loved it for what it can provide and reviled it as a sinister object literally controlling our thoughts, and he shows how it has figured in other cultural realms, such as the work of artists like Wolf Vostell and Nam June Paik. Finally, Horrock laments the death of the cathode ray tube and the emergence of the flat-screen, which has reduced the presence of the television as a significant material object. Altogether, *The Joy of Sets* brings this most elusive object into crystal-clear critical and historical focus.

A Pictorial History of Television Irving Settler, William Laas, 1969 From the Peter Neil Issacs collection.

The Columbia History of American Television Gary Richard Edgerton, 2007 Richly researched and engaging, *The Columbia History of American Television* tracks the growth of TV into a convergent technology, a global industry, a social catalyst, a viable art form, and a complex and dynamic reflection of the American mind and character. Renowned media historian Gary R. Edgerton follows the technological progress and increasing cultural relevance of television from its prehistory (before 1947) to the Network Era (1948-1975) and the Cable Era (1976-1994). He considers the remodeling of television's look and purpose during World War II; the gender, racial, and ethnic components of its early broadcasts and audiences; its transformation of postwar America; and its function in the political life of the country. In conclusion, Edgerton takes a discerning look at our current Digital Era and the new forms of instantaneous communication that continue to change America's social, political, and economic landscape.

Television in the Antenna Age David Marc, Robert Thompson, 2004-12-17 *Television in the Antenna Age* is a brief, accessible, and engaging overview of the medium's history and development in the US. Integrating three major concerns--television as an industry, a technology, and an art—the book is a basic primer on the complex, fascinating, and often overlooked story of television and its impact on American life. Covers the entire history of American television, from its urban, middle-class beginnings in the late 40s, to the contemporary impact of new technologies and consolidated corporate. Includes interview segments with industry insiders, pictures, and sidebars to illustrate important figures, trends, and events
