Breakthrough Food Product Innovation Through Emotions Research David Lundahl,2011-10-19 More than 95% of all consumer product launched in the packaged goods sector fail to achieve their goals for success. Breakthrough Food Product Innovation Through Emotions Research gives a clear answer for innovation teams seeking to increase product success rates by breaking through the clutter in an otherwise undifferentiated, commoditized marketplace. Through case studies, it lays out a practical approach for applying emotions research throughout the food innovation and product development process. The basic premise is that emotions are the chief motivation for why consumers sense, select, seek and share their food product experiences. With this novel framework, the science of consumer behavior is made operational for innovation teams. Emotions insight inspires innovation teams to create and helps guide decision making as they design sensory cues and other behavior drivers into products that make consumers want to consume. This book has implications for the whole innovation team - innovators such as product developers, designers, creative chiefs, and marketers; strategists such as line managers; and researchers such as sensory and marketing researchers. - Presents a behaviour-driven approach to innovation for the development of breakthrough food products - Illustrates a collaborative framework to inspire creativity and guide decision making through emotions insights - Explores a research framework that gets to the whys of consumer behavior by distilling the science of emotions into research insights - Defines design and development methods to build sensory cues into packaging and packaged foods that deliver emotional impact - Explains research methods that get to the so whats of insights through emotions research - Provides case studies and examples proving the value of the behavior-driven approach to food product innovation

Advances in Food and Nutrition Research ,2025-09-01 Advances in Food and Nutrition Research, Volume 116 presents the most recent developments in food science, focusing on the latest advances in understanding fundamental mechanisms and control solutions for lipid oxidation in meat. It delves into the interactions of cold plasma with food

ingredient functionality, examines plant-based milk's health impacts, and critically analyzes the nutritional consequences of emerging processed foods. Additionally, the book addresses the formation and reduction of polycyclic aromatic hydrocarbons in processed foods and explores innovative technologies for meat waste valorization and the detection of bacterial pathogens using biosensors and phage biocontrol. Titles of notable chapters include Lipid Oxidation in Meat: From Fundamental Mechanisms to Latest Control Solutions, Cold Plasma interactions with Food Ingredients Functionality, Current Research on Plant-Based Milk and Impact on Health, Emerging Processed Food and its Nutritional Consequences: A Critical Analysis, and Polycyclic Aromatic Hydrocarbons in Processed Foods: Formation, Occurrence, Analysis and Reduction.

How the Other Half Eats Priya Fielding-Singh, 2021-11-16 This important book “weaves lyrical storytelling and fascinating research into a compelling narrative” (San Francisco Chronicle) to look at dietary differences along class lines and nutritional disparities in America, illuminating exactly how inequality starts on the dinner plate. Inequality in America manifests in many ways, but perhaps nowhere more than in how we eat. From her years of field research, sociologist and ethnographer Priya Fielding-Singh brings us into the kitchens of dozens of families from varied educational, economic, and ethnoracial backgrounds to explore how—and why—we eat the way we do. We get to know four families intimately: the Bakers, a Black family living below the federal poverty line; the Williamses, a working-class white family just above it; the Ortegas, a middle-class Latinx family; and the Cains, an affluent white family. Whether it's worrying about how far pantry provisions can stretch or whether there's enough time to get dinner on the table before soccer practice, all families have unique experiences that reveal their particular dietary constraints and challenges. By diving into the nuances of these families' lives, Fielding-Singh lays bare the limits of efforts narrowly focused on improving families' food access. Instead, she reveals how being rich or poor in America impacts something even more fundamental than the food families can afford: these experiences impact the very meaning of food itself. Packed with lyrical storytelling and groundbreaking research, as well as Fielding-Singh's personal experiences with food as a biracial, South Asian American woman, *How the Other Half Eats* illuminates exactly how inequality starts on the dinner plate. Once you've taken a seat at tables across America, you'll never think about class, food, and public health the same way again.

The Dorito Effect Mark Schatzker, 2015-05-05 A lively argument from an award-winning journalist proving that the key to reversing America's health crisis lies in the overlooked link between nutrition and flavor: “The Dorito Effect is one of the most important health and food books I have read” (Dr. David B. Agus, New York Times bestselling author). We are in the grip of a food crisis. Obesity has become a leading cause of preventable death, after only smoking. For nearly half a century we've been trying to pin the blame somewhere—fat, carbs, sugar, wheat, high-fructose corn syrup. But that search has been in vain, because the food problem that's killing us is not a nutrient problem. It's a behavioral problem, and it's caused by the changing flavor of the food we eat. Ever since the 1940s, with the rise of industrialized food production, we have been

gradually leeching the taste out of what we grow. Simultaneously, we have taken great leaps forward in technology, creating a flavor industry, worth billions annually, in an attempt to put back the tastes we've engineered out of our food. The result is a national cuisine that increasingly resembles the paragon of flavor manipulation: Doritos. As food—all food—becomes increasingly bland, we dress it up with calories and flavor chemicals to make it delicious again. We have rewired our palates and our brains, and the results are making us sick and killing us. With in-depth historical and scientific research, *The Dorito Effect* casts the food crisis in a fascinating new light, weaving an enthralling tale of how we got to this point and where we are headed. We've been telling ourselves that our addiction to flavor is the problem, but it is actually the solution. We are on the cusp of a new revolution in agriculture that will allow us to eat healthier and live longer by enjoying flavor the way nature intended.

Bite Back Saru Jayaraman, Kathryn De Master, 2020-05-12 The food system is broken, but there is a revolution underway to fix it. *Bite Back* presents an urgent call to action and a vision for disrupting corporate power in the food system, a vision shared with countless organizers and advocates worldwide. In this provocative and inspiring new book, editors Saru Jayaraman and Kathryn De Master bring together leading experts and activists who are challenging corporate power by addressing injustices in our food system, from wage inequality to environmental destruction to corporate bullying. In paired chapters, authors present a problem arising from corporate control of the food system and then recount how an organizing campaign successfully tackled it. This unique solutions-oriented book allows readers to explore the core contemporary challenges embedded in our food system and learn how we can push back against corporate greed to benefit workers and consumers everywhere.

Pulsed Electric Fields to Obtain Healthier and Sustainable Food for Tomorrow Francisco J. Barba, Oleksii Parniakov, Artur Wiktor, 2020-04-17 *Pulsed Electric Fields to Obtain Healthier and Sustainable Food for Tomorrow* illustrates innovative applications derived from the use of pulsed electric fields beyond microbial inactivation. The book begins with an introduction on how pulsed electric fields work and then addresses the impact of pulsed electric fields on bioaccessibility/bioavailability and the development of nutraceuticals and food additives. Other sections explore the reduction of contaminants and assess the improvement of industrial process efficiency. A final section explores patents and commercial applications. This book will be a welcomed resource for anyone interested in the technological, physiochemical and nutritional perspectives of product development and the reduction of food toxins and contaminants. The concepts explored in this book could have a profound impact on addressing the concept of food on demand, a concept that is a top priority in industry. - Explores how pulsed electric field treatment affects nutrients and the retention of bioactive compounds - Identifies PEF approaches and optimized, targeted processing conditions to improve food quality, bioavailability and bioaccessibility of nutrients and bioactive compounds - Highlights the mechanisms influencing the reduction of toxins and

contaminants during pulsed electric fields processing - Explains how pulsed electric fields design can enhance sustainability throughout the food chain

Processing and Impact on Active Components in Food Victor R. Preedy, 2014-06-03 From beef to baked goods, fish to flour, antioxidants are added to preserve the shelf life of foods and ensure consumer acceptability. These production-added components may also contribute to the overall availability of essential nutrients for intake as well as the prevention of the development of unwelcome product characteristics such as off-flavours or colours. However, there are processes that reduce the amount of naturally occurring antioxidants and awareness of that potential is just as important for those in product research and development. There is a practical need to understand not only the physiological importance of antioxidants in terms of consumer health benefit, but how they may be damaged or enhanced through the processing and packaging phases. This book presents information key to understanding how antioxidants change during production of a wide variety of food products, with a focus toward how this understanding may be translated effectively to other foods as well. Addresses how the composition of food is altered, the analytical techniques used, and the applications to other foods Presents in-chapter summary points and other translational insights into concepts, techniques, findings and approaches to processing of other foods Explores advances in analytical and methodological science within each chapter.

Healthy and Sustainable Food Systems Mark Lawrence, Sharon Friel, 2019-10-18 This comprehensive text provides the latest research on key concepts, principles and practices for promoting healthy and sustainable food systems. There are increasing concerns about the impact of food systems on environmental sustainability and, in turn, the impact of environmental sustainability on the capacity of food systems to protect food and nutrition security into the future. The contributors to this book are leading researchers in the causes of and solutions to these challenges. As international experts in their fields, they provide in-depth analyses of the issues and evidence-informed recommendations for future policies and practices. Starting with an overview of ideas about health, sustainability and equity in relation to food systems, *Healthy and Sustainable Food Systems* examines what constitutes a food system, with chapters on production, manufacturing, distribution and retail, among others. The text explores health and sustainable diets, looking at issues such as overconsumption and waste. The book ends with discussions about the politics, policy, personal behaviours and advocacy behind creating healthy and sustainable food systems. With a food systems approach to health and sustainability identified as a priority area for public health, this text introduces core knowledge for students, academics, practitioners and policy-makers from a range of disciplines including food and nutrition sciences, dietetics, public health, public policy, medicine, health science and environmental science.

Good Food, Strong Communities Steve Ventura, Martin Bailkey, 2017-12-01 Many Americans are hungry, while others struggle to find healthy foods. What are communities doing to address this problem, and what should they be doing? Good

Food, Strong Communities shares ideas and stories about efforts to improve food security in large urban areas of the United States by strengthening community food systems. It draws on five years of collaboration between a research team comprised of the University of Wisconsin, Growing Power, and the Michael Fields Agricultural Institute, and more than thirty organizations on the front lines of this work in Boston, Chicago, Detroit, Milwaukee, Minnesota, Los Angeles, Madison, and Cedar Rapids. Here, activists and scholars talk about what's working and what still needs to be done to ensure that everyone has access to readily available, affordable, appropriate, and acceptable food. The approach begins by laying out the basic principles of food security and food justice in light of the diversity of food system practices and innovations in America's cities. The contributing authors address land access for urban agriculture, debates over city farming, new possibilities in food processing, and the marketing of healthy food. They put these basic elements—land, production, processing, and marketing—in the context of municipal policy, education, and food justice and sovereignty, particularly for people of color. While the path of a food product from its producer to its consumer may seem straightforward on the surface, the apparent simplicity hides the complex logistical—and value-laden—factors that create and maintain a food system. This book helps readers understand how a food system functions and how individual and community initiatives can lessen the problems associated with an industrialized food system.

The Jungle Effect Daphne Miller, 2008

Everybody Eats Marianne LeGreco, Niesha Douglas, 2021-08-31 *Everybody Eats* tells the story of food justice in Greensboro, North Carolina—a midsize city in the southern United States. The city's residents found themselves in the middle of conversations about food insecurity and justice when they reached the top of the Food Research and Action Center's list of major cities experiencing food hardship. Greensboro's local food communities chose to confront these high rates of food insecurity by engaging neighborhood voices, mobilizing creative resources at the community level, and sustaining conversations across the local food system. Within three years of reaching the peak of FRAC's list, Greensboro saw an 8 percent drop in its food hardship rate and moved from first to fourteenth in FRAC's list. Using eight case studies of food justice activism, from urban farms to mobile farmers markets, shared kitchens to food policy councils, *Everybody Eats* highlights the importance of communication—and communicating social justice specifically—in building the kinds of infrastructure needed to create secure and just food systems.

Best Before Nicola Temple, 2019-08-22 Long before there was the ready meal, humans processed food to preserve it and make it safe. From fire to fermentation, our ancestors survived periods of famine by changing the very nature of their food. This ability to process food has undoubtedly made us one of the most successful species on the planet, but have we gone too far? Through manipulating chemical reactions and organisms, scientists have unlocked all kinds of methods of to improve food longevity and increase supply, from apples that stay fresh for weeks to cheese that is matured over days rather than

months. And more obscure types of food processing, such as growing steaks in a test-tube and 3D-printed pizzas, seem to have come straight from the pages of a science-fiction novel. These developments are keeping up with the changing needs of the demanding consumer, but we only tend notice them when the latest scaremongering headline hits the news. *Best Before* puts processed food into perspective. It explores how processing methods have evolved in many of the foods that we love in response to big business, consumer demand, health concerns, innovation, political will, waste and even war. *Best Before* arms readers with the information they need to be rational consumers, capable of making informed decisions about their food.

The 31-Day Food Revolution Ocean Robbins, 2019-02-05 *The 31-Day Food Revolution* is an eater's guide to liberation from a toxic food world. It presents an action plan for eating food that is healthy, humane, sustainable and delicious. In just 31 days you can: • use the restorative power of foods to heal your gut • lose excess weight • dramatically lower the risk of diseases including cancer, heart disease, dementia and diabetes • contribute to a healthier planet Focusing on whole foods, plant-powered eating, cutting out sugar and improving overall nutrition, this book is a road map to a healthier life and a healthier world.

Environmental Nutrition Joan Sabate, 2019-07-01 *Environmental Nutrition: Connecting Health and Nutrition with Environmentally Sustainable Diets* explores the connection between diet, environmental sustainability and human health. Current food systems are a major contributor to our most pressing health and environmental issues, including climate change, water scarcity, food insecurity and chronic diseases. This book not only seeks to increase our understanding of the interrelatedness of these major global issues, but also aids in the creation of new solutions. Sections discuss the diet, the health and environment trilemma, food systems and their trends, environmental nutrition as an all-encompassing discipline, and the environmental nutrition model. - Demonstrates how the food system, the environment and human health are inter-related - Explores how dietary patterns impact food production and agriculture choices - Identifies the imbalance between current food production relative to demand - Addresses how the current food system negatively impacts the environment - Provides practical solutions to how diets can be both healthy and sustainable

MEASURING YOUR SOCIAL IMPACT Jonathan Schifferes, 2014

Note on the Impact of Millennials on the Food System James Weber, 2016

Fast Food Genocide Joel Fuhrman, M.D., Robert Phillips, 2017-10-17 From the #1 New York Times bestselling author of *Eat to Live* and *The End of Diabetes*, an unflinching, provocative exploration of how our food is killing us and the ways in which we are unwitting participants in an unprecedented and exploding health crisis. Fast food is far more than just the burgers, fries, and burritos served at chain restaurants; it is also the toxic, human-engineered products found in every

grocery store across America. These include: cold breakfast cereals; commercial and preserved (deli) meats and cheeses; sandwich breads and buns; chips, pretzels, and crackers; fried foods; energy bars; and soft drinks. Fast foods have become the primary source of calories in the United States and consequently the most far-reaching and destructive influence on our population. The indisputable truth is that our highly processed diet is the source of a national health crisis that is exploding into a genocide with unseen tragic implications. Heart attacks, strokes, cancer, obesity, ADHD, autism, allergies, and autoimmune diseases all have the same root cause – our addiction to toxic ingredients. New York Times bestselling author, board-certified physician, nutritional researcher, and leading voice in the health field Joel Fuhrman, M.D., explains why the problem of poor nutrition is deeper, more serious, and more pervasive than anyone imagined. *Fast Food Genocide* draws on twenty-five years of clinical experience and research to confront our fundamental beliefs about the impact of what we eat. This book identifies issues at the heart of our country's most urgent problems. Fast food kills, but it also perpetuates bigotry and derails the American dream of equal opportunity and happiness for all. It leaves behind a wake of destruction creating millions of medically dependent and sickly people burdened with poor-quality lives. The solution hiding in plain sight — a nutrientdense healthful diet — can save lives and enable humans to reach their intellectual potential and achieve successful and fulfilling lives. Dr. Fuhrman offers a life-changing, scientifically sound approach that can alter American history and perhaps save your life in the process.
