Indiana (in) Decision Mark Akers, 2010-01-25 Indiana is at an economic crossroads. Its history and culture do not embrace change, yet its economy is heavily tied to manufacturing and exports—both of which are highly sensitive to the ever-changing global economy. The Hoosier state is aging and experiencing a brain drain from its universities. Its infrastructure needs repair and updating. And its public schools are average at a time when excellence is demanded. Indiana is at a point in its history when it must make decisions about the directions it will take in the future. Author Mark Akers examines the culture of Hoosiers and what makes them happy, the global economic forces that the state is facing, and describes those actions that state and local governments must implement to compete for economic growth—world-class infrastructure, the best education system anywhere, highly attractive cities and towns, meaningful incentives, and a stable, predictable, and helpful government. But even if these basic needs are addressed, can Indiana eventually prosper and develop a broad-based, innovative economy? *Indiana (In)Decision* describes Indiana's dilemma of indecisiveness at a time requiring rapid decision-making about its economic future. The book is meant for everyone, not just economists or academics.

IT Strategy for Non-IT Managers Amrit Tiwana, 2017-09-15 How non-IT managers can turn IT from an expensive liability into a cost-effective competitive tool. Firms spend more on information technology (IT) than on all other capital assets combined. And yet despite this significant cash outlay, businesses often end up with IT that is uneconomical and strategically feeble. What is missing in many organizations' IT strategy is the business acumen of managers from non-IT departments. This book presents tools for non-IT managers to turn IT from an expensive liability into a cost-effective

competitive tool. It equips readers with the concepts and analytical skills necessary to understand IT needs and opportunities from both sides of the business-IT divide. Each chapter opens with a jargon decoder–nontechnical explanations of the key ideas in the chapter—and ends with a checklist summarizing non-IT factors to consider in IT decisions. Chapters cover such topics as infusing competitive firepower into IT strategy; amalgamating software and data for a hard-to-duplicate competitive advantage; making choices that meet today's business needs without handicapping future strategy; establishing who decides what about IT strategies; sourcing IT and its challenges; protecting IT assets against disaster in ways that IT professionals cannot; and recognizing the business potential of emerging technologies. Examples are drawn from large corporations, small businesses, and nonprofits around the world. The book is suitable for use in the MBA core IT course, and is aimed especially at students in professional or executive MBA programs. It will also be a valuable reference for managers.

Challenges and Opportunities of Bangladesh's Ready-Made Garment Industry. A comparative value chain analysis Johannes Bachstädter, 2023-03-30 Master's Thesis from the year 2014 in the subject Design (Industry, Graphics, Fashion), grade: 1.3, RWTH Aachen University, language: English, abstract: The thesis explores the value chain of Bangladesh's ready-made garments industry at a crucial point: The link between internationally operating brands and retailers and locally operating garment manufacturers. The research problem arose from the discussions about the question who can bear which responsibilities for improving the working conditions in the sector. By illustrating the various differences in the buyer-producer relations, the author sought to better understand the complex interdependencies of this network and thereby contribute to a better insight to aid all involved stakeholders to move the sector forward. Various types of relations between

garment manufacturers and international buyers could be identified: Some manufacturers are relying on a wide choice of buying agents, buying houses and direct buyers. Other companies are producing mainly for direct buyers. The latter can benefit from a slightly higher profit margin but in both cases, the relations are based on oral contracts and the factories' capacity utilisation is subject to a great order fluctuation. A third and most noticeable group is characterized by very close ties to the buyers. These ties enable producers to re-negotiate order conditions in case of difficult circumstances and the first buyers are concluding long-term contracts with the manufacturers. The companies that rely on strong long-term contracts have a smaller profit margin but can manage their companies easier nevertheless because their capacity fluctuation is close to zero. At the same time, price and compliance pressure are stated as the most important challenges by the manufacturers. The enforcement of high standards on building and fire safety has become a number one topic in Bangladesh's RMG sector. According to a large part of the interviewed manufacturers, the regulations are rising too fast. They often complain about shrinking profit margins that would not allow them to invest in compliance. The international buyers on the other hand refer to the low productivity that should be raised by the manufacturers as a first step to gain more profitability. It can be concluded that the value chain of ready-made garments in Bangladesh shows eminent characteristics of a captive governance but there are several important distinctions to make within this category. The interviews showed evidence that the buyer-producer relations are developing towards a more cooperative relationship based on partnership. Editor's Note: Due to data privacy and the sensitiveness of certain information, parts of the thesis and appendix were removed.

The Knowledge Work Factory: Turning the Productivity Paradox into Value for Your Business William F.

Heitman, 2019-01-04 Unlock your company's true potential by eliminating knowledge work waste that's hiding in plain sight. Back in 1987, Nobel laureate Robert Solow quipped, "You can see the computer age everywhere but in the productivity statistics." This costly condition soon became known as the "productivity paradox." Why does it persist today? Why do knowledge workers spend a third of their days on needless correction, avoidable work and overservice, despite existing office technology that could help, even automate, their actions? And why does nobody notice? The answers—and solutions—are in this book. The Knowledge Work Factory uncovers the well-intentioned waste that hides in plain sight within virtually every organization. It reveals the ingrained perceptual biases that trick our brains into accepting the status quo and missing breakthrough opportunities. It draws stunning parallels to industrial production, which cracked this very code over 100 years ago. Most importantly, it gives you an easy-to-follow, one-stop guide to boost efficiency, productivity, and morale among the very knowledge workers who struggle under the burden of the productivity paradox. Discover your organization's true, untapped capacity. Maximize the productivity of every single knowledge worker. Uncover "better-than-best practices." Reap benefits that drop straight to the bottom line. The power is in your hands—with The Knowledge Work Factory.
