Introduction to Crystal Growth and Characterization Klaus-Werner Benz, Wolfgang Neumann, 2014-07-28 This new textbook provides for the first time a comprehensive treatment of the basics of contemporary crystallography and crystal growth in a single volume. The reader will be familiarized with the concepts for the description of morphological and structural symmetry of crystals. The architecture of crystal structures of selected inorganic and molecular crystals is illustrated. The main crystallographic databases as data sources of crystal structures are described. Nucleation processes, their kinetics and main growth mechanism will be introduced in fundamentals of crystal growth. Some phase diagrams in the solid and liquid phases in correlation with the segregation of dopants are treated on a macro- and microscale. Fluid dynamic aspects with different types of convection in melts and solutions are discussed. Various growth techniques for semiconducting materials in connection with the use of external field (magnetic fields and microgravity) are described. Crystal characterization as the overall assessment of the grown crystal is treated in detail with respect to - crystal defects - crystal quality - field of application Introduction to Crystal Growth and Characterization is an ideal textbook written in a form readily accessible to undergraduate and graduate students of crystallography, physics, chemistry, materials science and engineering. It is also a valuable resource for all scientists concerned with crystal growth and materials engineering.

*Materials Informatics* Olexandr Isayev, Alexander Tropsha, Stefano Curtarolo, 2019-08-08 Provides everything readers need to know for applying the power of informatics to materials science There is a tremendous interest in materials informatics and application of data mining to materials science. This book is a one-stop guide to the latest advances in these emerging fields. Bridging the gap between materials science and informatics, it introduces readers to up-to-date data mining and machine learning methods. It also provides an overview of state-of-the-art software and tools. Case studies illustrate the power of materials informatics in guiding the experimental discovery of new materials. Materials Informatics: Methods, Tools and Applications is presented in two parts?Methodological Aspects of Materials Informatics and Practical Aspects and Applications. The first part focuses on developments in software, databases, and high-throughput computational activities. Chapter topics include open quantum materials databases; the ICSD database; open crystallography databases; and more. The second addresses the latest developments in data mining and machine learning for materials science. Its chapters cover genetic algorithms and crystal structure prediction; MQSPR modeling in materials informatics; prediction of materials

properties; amongst others. -Bridges the gap between materials science and informatics -Covers all the known methodologies and applications of materials informatics -Presents case studies that illustrate the power of materials informatics in guiding the experimental quest for new materials -Examines the state-of-the-art software and tools being used today Materials Informatics: Methods, Tools and Applications is a must-have resource for materials scientists, chemists, and engineers interested in the methods of materials informatics.

*Fundamentals of Powder Diffraction and Structural Characterization of Materials* Peter Y. Zavalij, Vitalij K. Pecharsky, 2025-09-26 This expanded, updated, third edition features many new color illustrations, timely practical examples, and experimental and computational tools introduced in the past ten years, while retaining its excellent introduction to structural characterization and crystallography. The book is written for those interested in a fundamental conceptual understanding powder diffraction and structural characterization of materials as well as in practical skills in examining phase composition and structure of materials using modern experimental powder diffraction tools. Special attention is given to proper collection of powder diffraction data using laboratory x-ray, synchrotron, and neutron radiation. Exemplary data sets serve as a springboard for readers to develop knowledge about modern approaches, algorithms, and software, as well as to gain proficiency in extracting precise structural information about crystalline materials from powder diffraction data. The book requires no specialized knowledge, so it is useful to beginners. Suitable for upper level undergraduate, and graduate students, as well as practitioners in the research labs and the field, the authors' in-depth treatment helps readers from various disciplines, including crystallography, materials science, solid state chemistry and physics, geology and mineralogy, become experts on this subject.

Doctoral Thesis / Dissertation from the year 2016 in the subject Physics - Nuclear Physics, grade: 9.99, , language: English, abstract: The highest energy in the electromagnetic spectrum is occupied by the gamma-rays, ( $\gamma$ -rays). For the betterment of mankind,  $\gamma$ -rays have immense applications as non-destructive evaluation tool in various fields, such as radiological diagnostics, security screening and research. However, an exposure of  $\gamma$ -rays to living tissues has adverse health effects, especially when the exposure time is long and intensity is high. In this regard, the biggest concern for the scientific community in radiation protection is the safety of the nuclear reactors, which are always at the risk of accidental-leakage of  $\gamma$ -rays. Under such circumstances, there is always a need to minimize the exposure of  $\gamma$ -rays originated from critical sites such as nuclear establishments and nuclear-waste disposal sites. This can be achieved by using effective  $\gamma$ -ray shielding enclosures at these sites. The term shield refers to the radiation attenuating material placed around radioactive source to stop or minimize the leakage of ionizing-radiations to its immediate surroundings. For  $\gamma$ -ray shielding purpose, any material with sufficient thickness can be used to attenuate the intensity of the rays. However, the choice of an appropriate material is necessary for effective shielding. Mostly, high-Z (atomic-number) and high-density materials such as lead and its alloys have been recommended to use for shielding purpose. Besides, the high-cost, toxicity and non-availability in huge quantities has put some constraints on the excessive use of high-Z materials as  $\gamma$ -ray protective shields. If space is not a constraint, then in addition to high-Z materials, commonly available low-Z building-materials can be used for the cost effective shielding purpose. The low-Z building-materials are non-toxic, low cost, inexpensive and easily available in abundance.

*Einfluss der Austenitisierungstemperatur auf den Restaustenitgehalt im KAS X153CrMoV12-1* Bünyamin Argac, 2024-02-27 Studienarbeit aus dem Jahr 2021 im Fachbereich Ingenieurwissenschaften - Maschinenbau, Note: 2.7, Ruhr-Universität Bochum (Werkstofftechnik), Sprache: Deutsch, Abstract: Ziel dieser Arbeit ist es, den Restaustenitgehalt im Kaltarbeitsstahl X153CrMoV12- 1 in Abhängigkeit der Austenitisierungstemperatur zu bestimmen und zusätzlich die Anwendbarkeit unterschiedlicher Analyseverfahren zu bewerten. Wie oben erwähnt, wird dieser KAS mit unterschiedlichen RA-Gehalten durch verschiedene Wärmebehandlungen eingestellt. Dazu wurden verschiedene Methoden angewendet. Diese Methoden sind zum einen die Quantitative Bildanalyse mit der Punktrastermethode und der Bildbinarisierung. Zum anderen wurde mit der Röntgendiffraktometrie (XRD) gearbeitet. Die Restaustenitgehalte wurden anhand der exakt gleichen Proben mit den unterschiedlichen Verfahren bestimmt und anschließend ausgewertet und analysiert. Die Verfahren wurden hinsichtlich des benötigten Zeitaufwands und hinsichtlich der erzielten Genauigkeit analysiert. Hierbei ist darauf zu achten,

wie groß der Arbeitsaufwand der einzelnen Methoden ist. Es gibt Methoden, die sehr zeitaufwändig sind, dafür aber eine gute Genauigkeit liefern. Andererseits gibt es auch Methoden, die vom Zeitaufwand geringer sind, jedoch keine gute Genauigkeit liefern. Bereits mit der ersten Messung, beispielsweise mit der Punktrastermethode, konnten zielführende Werte ermittelt werden. Diese haben sich mit der Zeit bestätigt, da wiederholt positive Ergebnisse bei der Analyse erzielt wurden.
