Trading with the Environment Thomas Andersson, Carl Folke, Stefan Nystrom, 2013-11-26 Should there be firmer restrictions on trade, with more policies aimed at protecting its environmental impacts, or would the environment benefit most from unrestricted free trade? Do importing countries have a responsibility only to their local ecosystems, or are they also responsible for environmental degradation caused by the production of traded goods in exporting countries? Trading the Environment examines both the dependence and the effects of international trade on the earth's life support systems and looks at ways in which trading regulations could be adapted to promote ecologically sustainable economic development. It addresses the issues from a fully integrated approach, focusing on the interrelations between ecosystems, economic development and trade. The authors provide a carefully constructed ecological and economic analysis of trade and the environment, examine the existing legal and institutional frameworks and set out 16 recommendations to achieve environment beneficial trade at both national and international levels. Trading with the environment was originally commissioned by the Swedish government and is already regarded thereon essential reference. It makes an excellent introduction as well as constructive analysis, both for students and for policy-makers and professional economics and other scientists working on the issues. Published in 1995

Climate Change Economics Jiahua Pan, 2022-04-22 This book establishes theories and methods of climate change economics based on the perspective of human development. The book, in two volumes, consists of papers and research reports authored by Pan Jiahua or researchers under his guidance. Professor Pan Jiahua is a leading figure in the field of political economy in climate change and has written extensively. The book is divided into four parts, covering theories, methods, governance, and policies. • The theory part includes the general economics of climate change, the political economy of climate change, carbon emissions, and human development. • The method part covers the economic analysis of greenhouse gas reduction and economics of low-carbon economic development. • The governance is on the design and construction of international climate regimes and China's role and choice. • Finally, the policy part consists of three

chapters: policy choices for low-carbon transformation, energy-saving emission reduction, and low-carbon development and adaptation to climate change. The disciplines involved in climate change economics include welfare economics, development economics, international political economics, and property rights economics. In the context of multidisciplinary cross-cutting, the economics of climate change has evolved. The book proposes theories, methods and offers policy solutions and cases. It is of high academic and empirical value for developing countries to strive for fair rights and interests in international climate negotiations, obtain development space, and pursue a low-carbon and ecological economy. Professor Jiahua Pan and his team at the Chinese Academy of Social Sciences have contributed greatly to the development of climate change economics in China. Their work has laid the foundation of climate change economics from basic concepts, frameworks, and systems and has a great significance in promoting the development of climate change economics.

Circular Economy for Buildings and Infrastructure Jian Zuo,Liyin Shen,Ruidong Chang,2024-05-03 This edited volume covers theoretical and practical aspects of circular economy in building development, offering chapters dealing with topics such as material design, affordability of housing development, waste management and recycling, smart metering, and more. A particular focus is placed on various stakeholders' points of view. The book's chapters are co-developed and contributed by multidisciplinary teams including both academics and industry practitioners. The case study-oriented approach taken here helps to facilitate the reader's understanding of how building sustainability can be achieved in the context of circular economy. The building industry has significant environmental, social and economic impacts. As one of the biggest energy consumers and carbon emitters, building sustainability has attracted wide attention globally. Building

projects and their associated activities consume a large amount of energy, natural resources and water while producing a large proportion of wastes throughout their lifecycles. The traditional linear approach of “make, use and dispose” has been heavily criticized, whilst the circular approach has gained momentum. Indeed, circular economy has emerged as one of key principles to manage sustainability related issues by means of focusing on the circularity of resources as well as the cost implications.

Aquaculture Ecology Shuang-Lin Dong,Xiang-Li Tian,Qin-Feng Gao,Yun-Wei Dong,2023-04-04 This book introduces aquaculture ecology as a science of the interaction between commercial aquatic organisms as well as their farming activities and the environment, including the rationales of building and management of aquaculture systems. This book covers productivity and carrying capacity, effects of cyclical fluctuation of environmental factors on aquatic organisms, biological control of water quality, structural optimization of aquaculture systems and ecological prevention of disease. In the last chapter, aquaculture production systems are introduced from multiple perspectives. This book has been designed to provide a stimulating and informative text for researchers in aquaculture, fisheries as well as hydrobiology.

Encyclopedia of the Anthropocene ,2017-11-27 Encyclopedia of the Anthropocene, Five Volume Set presents a currency-based, global synthesis cataloguing the impact of humanity’s global ecological footprint. Covering a multitude of aspects related to Climate Change, Biodiversity, Contaminants, Geological, Energy and Ethics, leading scientists provide foundational essays that enable researchers to define and scrutinize information, ideas, relationships, meanings and ideas within the Anthropocene concept. Questions widely debated among scientists, humanists, conservationists, politicians and others are included, providing discussion on when the Anthropocene began, what to call it, whether it should be considered an official geological epoch, whether it can be contained in time, and how it will affect future generations. Although the idea that humanity has driven the planet into a new geological epoch has been around since the dawn of the 20th century, the term ‘Anthropocene’ was only first used by ecologist Eugene Stoermer in the 1980s, and hence popularized in its current meaning by atmospheric chemist Paul Crutzen in 2000. Presents comprehensive and systematic coverage of topics related to the Anthropocene, with a focus on the Geosciences and Environmental science Includes point-counterpoint articles debating key aspects of the Anthropocene, giving users an even-handed navigation of this complex area Provides historic, seminal papers and essays from leading scientists and philosophers who demonstrate changes in the Anthropocene concept over time

Outdoor Recreation Management John Jenkins,John Pigram,2005-10-05 It is now widely recognized that recreation is as important as work. This revealing book analyzes leisure and outdoor recreation in terms of both their management and their wider importance to society. Specifically, it: clarifies the link between leisure, recreation, tourism and resource management reviews contemporary outdoor recreation management and concepts critically examines approaches to outdoor

recreation planning and management in diverse recreational settings considers the future of outdoor recreation and the potential influences of economic, social, political and technological developments. Wide-ranging and topical, it considers such issues as motivation and choice, provision for people with special needs, the impact of outdoor recreation on the environment, and outdoor recreation in both urban and rural contexts. This comprehensively revised second edition has many sections rewritten and expanded to reflect contemporary development in leisure and outdoor recreation management in countries such as Australia, Canada, the UK, the US and New Zealand. With an extensive bibliography of more than 500 references and including further reading sections and review questions, it is an essential student purchase and one of the most comprehensive and international accounts of outdoor recreation management available.

Historical Epistemology of Ecological Economics Alberto Fragio, 2022-03-05 This volume uses historical epistemology in order to address several topics in the history of economic thought, with special emphasis on ecological economics, environmental metaphors of scarcity, and mathematical ecology. Using the field of ecological economics as an anchor point, the author reflects on the styles of reasoning in economics with a view towards understanding the nature of disagreement that stems from a failure of communication between rival approaches in economics. A thorough inquiry into issues related to identity, coherence, pluralism, and reception, this volume will appeal to researchers and students interested in history of economic thought, ecological economics, and philosophy of the sciences.
