Compelling Storytelling Narratives for Sustainable Branding Rodrigues, Paula, Borges, Ana Pinto, Vieira, Elvira, Tavares, Victor, 2024-07-16 Consumers are applying more pressure on companies to embrace sustainable practices and tell purposeful stories to win their approval. They are increasingly critical of brands for their environmental and social impact, demanding authenticity and accountability. However, many businesses need help navigating this complex terrain, unsure of how to effectively integrate sustainability into their branding strategies. The lack of comprehensive resources that bridge the gap between theory and practice in sustainable branding is a significant challenge that needs immediate

attention. *Compelling Storytelling Narratives for Sustainable Branding* solves this pressing problem through a collection of insightful chapters contributed by esteemed academics, researchers, and practitioners. This book offers a roadmap for businesses seeking to align their brand narratives with sustainability principles. By delving into the psychology of storytelling, analyzing successful case studies, and providing practical guidance, this compendium equips readers with the tools and strategies to integrate sustainability into their branding efforts authentically.

International Encyclopedia of Transportation, 2021-05-13 In an increasingly globalised world, despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction; this is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid-19 has had on transportation across the world, at local, national and international levels. *Encyclopedia of Transportation, Seven Volume Set* - containing almost 600 articles - brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering, operations research, economics, geography and sociology in order to understand the changes taking place. Emphasising the interaction between these different aspects of research, it offers new solutions to modern-day problems related to transportation. Each of its nine sections is based around familiar themes, but brings together the views of experts from different disciplinary perspectives. Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines, different parts of the world and different social perspectives. The nine sections are structured around the following themes: Transport Modes; Freight Transport and Logistics; Transport Safety and Security; Transport Economics; Traffic Management; Transport Modelling and Data Management; Transport Policy and Planning; Transport Psychology; Sustainability and Health Issues in Transportation. Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future-oriented view of new research areas or challenges. The end result is a reference work that offers researchers and practitioners new approaches, new ways of thinking and novel solutions to problems. All-encompassing and expertly authored, this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world. Provides a forward looking and integrated approach to transportation Updated with future technological impacts, such as self-driving vehicles, cyber-physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach, including sets of comparative studies and applications

The Routledge Handbook of Architecture, Urban Space and Politics, Volume II Nikolina Bobic, Farzaneh Haghighi, 2024-11-22 Architecture and the urban are connected to challenges around violence, security, race and ideology, spectacle and data. The first volume of this handbook extensively explored these oppressive roles. This second volume

illustrates that escaping the corporatized and bureaucratized orders of power, techno-managerial and consumer-oriented capitalist economic models is more urgent and necessary than ever before. Herein lies the political role of architecture and urban space, including the ways through which they can be transformed and alternative political realities constituted. The volume explores the methods and spatial practices required to activate the political dimension and the possibility for alternative practices to operate in the existing oppressive systems while not being swallowed by these structures. Fostering new political consciousness is explored in terms of the following themes: Events and Dissidence; Biopolitics, Ethics and Desire; Climate and Ecology; Urban Commons and Social Participation; Marginalities and Postcolonialism. Volume II embraces engagement across disciplines and offers a wide range of projects and critical analyses across the so-called Global North and South. This multidisciplinary collection of 36 chapters provides the reader with an extensive resource of case studies and ways of thinking for architecture and urban space to become more emancipatory. Chapter 1 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution (CC-BY) 4.0 license.

The Globalization of Retailing Neil M. Coe, Neil Wrigley, 2009 This path-breaking collection brings together seminal contributions from the burgeoning multidisciplinary literature on the globalisation of retailing.

The Environmental and Social Impacts of Fast Fashion Emilia Barber, 2025 Fast fashion is causing extreme and lasting damage to the earth and its natural resources. The Merriam-Webster dictionary defines fast fashion as an approach to the design, creation, and marketing of clothing fashions that emphasizes making fashion trends quickly and cheaply available to consumers (Merriam-Webster, 2024). The fashion industry is one of the most polluting industries in the world, and the public seems largely unaware of the impact that their indulgence in purchasing short-term disposable clothing has on the environment. Fast fashion's linear approach to production, consumption, and disposal is depleting natural resources and harming communities. Society is fueled by consumerism, and that can blind people from the true effects of their purchasing habits. Because of social media influences, advertising, and new trends being pushed daily, consumers are led to mindless purchasing habits. These habits lead to the over-consumption of clothing that is only increasing and becoming increasingly damaging. Current production and consumption habits are not sustainable. Family and Consumer Science educators have a unique role in being catalysts for change by educating students on the environmental, social, and economic impacts of their purchasing habits. The reality is that many high school fashion design curriculums do not include aspects of sustainability, which is essential in promoting change (Utah State Board of Education, 2021). The concept of sustainability can be defined as the meeting of the needs of the present without compromising the ability of the future to meet their own needs (World Commission on Environment and Development, 1987). Sustainability education must be research-based and offer hands-on experiential learning to change students' purchasing behaviors and encourage them to act to make a difference (Armstrong

& LeHew, 2013). It will take the collective effort of everyone to work towards a cleaner future in the fashion industry, and that starts with the daily habits of consumers everywhere. The curriculum planned in this project will focus on a hands-on comprehensive approach to educating secondary students on the environmental, social, and economic aspects of the fashion industry when it comes to sustainability to promote lasting change.

The Making of Economic Society Robert L. Heilbroner,William S. Milberg,2008 Publisher description -- With its roots in history and eyes on the future, this book gives readers a balanced perspective of why our economic society is the way it is and where it may be headed by tracing its development from the Middle Ages to the present. Showing that today's economic problems cannot be understood unless we have an understanding of how they first arose, it explores the catalytic role past economic trends and dynamics have played in creating the present challenges we face, and offers suggestions on how we may deal with them most effectively. Focuses on problems and challenges of capitalism after the Golden Age (1945-1973), examining why the age came to an end and how globalization and income inequalities have changed the nature of capitalism. Considers the prospects of capitalism, outlines the essential features of a capitalist system, and stresses that capitalism can take many forms. Explores the concept of institutions, paying particular attention to the relation between states and markets, and workers and employers.

Eco-Friendly and Fair Mark Heuer,Carolyn Becker-Leifhold,2018-05-11 The make-take-waste paradigm of fast fashion explains much of the producer and consumer behavior patterns towards fast fashion. The evolution from a two-season fashion calendar to fast fashion, characterized by rapid product cycles from retailers and impulse buying by consumers, presents new challenges to the environment, workplace and labour practices. This book provides a comprehensive overview of new insights into consumer behaviour mechanisms in order to shift practices toward sustainable fashion and to minimize the negative impacts of fast fashion on the environment and society. Concepts and techniques are presented that could overcome the formidable economic drivers of fast fashion and lead toward a future of sustainable fashion. While the need for change in the fashion industry post-Rana Plaza could not be more obvious, alternative and more sustainable consumption models have been under-investigated. The paucity of such research extends to highly consumptive consumer behaviours regarding fast fashion (i.e. impulse buying and throwaways) and the related impediments these behaviours pose for sustainable fashion. Written by

leading researchers in the field of sustainable fashion and supported by the Textile Institute, this book evaluates fashion trends, what factors have led to new trends and how the factors supporting fast fashion differ from those of the past. It explores the economic drivers of fast fashion and what social, environmental and political factors should be maintained, and business approaches adopted, in order for fast fashion to be a sustainable model. In particular, it provides consumer behaviour concepts that can be utilized at the retail level to support sustainable fashion.
