Materiales para la construcción Lyall Addleson,1983 Esta obra procura proporcionar una ayuda sistemática basada en la relación entre los materiales para la construcción como un todo y los factores contra los cuales deben resistir. En consecuencia, cada uno de los factores se explica por separado en función de su naturaleza y propiedades y luego se relaciona a una categoría específica. También se incluyen las propiedades de todos los materiales relativos a cada factor.

Aprendizaje e instrucción en química. El cambio de las representaciones de los estudiantes sobre la materia Gómez Crespo, Miguel Ángel,2008 Este libro profundiza en el problema del aprendizaje y la instrucción, tratando de crear puentes entre la investigación didáctica y el trabajo en el aula. Se plantean algunas cuestiones teóricas, pero sobre todo se intenta profundizar en cómo se representan los alumnos la materia, cómo estructuran su conocimiento y cómo eso influye en las dificultades de aprendizaje. El objetivo del libro es rediseñar estrategias didácticas que ayuden a superar las dificultades de aprendizaje. La obra se estructura en tres apartados: el primero trata el problema del aprendizaje desde una perspectiva teórica, el segundo y el tercero presentan dos estudios experimentales. Uno se centra en el análisis de las representaciones sobre la materia que mantienen estudiantes de diferentes edades y niveles de instrucción, y el otro estudio empírico analiza el cambio de las representaciones a través de la instrucción.

Química. Materiales didácticos. Bachillerato Ministerio de Educación,1995 Recoge reflexiones sobre el proceso de enseñanza y aprendizaje de esta materia, presentando una posible organización de los contenidos.

Enseñanza de las ciencias para una nueva cultura docente Mario Quintanilla,Agustín Adúriz-Bravo (coautor),2022-01-31 En este libro se discuten posiciones epistemológicas diversas acerca de la enseñanza de las ciencias y los complejos procesos de comprensión y aprendizaje en el aula. Se incorporan discusiones en torno a modelos de formación del profesorado de Ciencias Naturales y al desarrollo de lógicas de reflexión sobre la práctica basados en visiones interpretativas críticas y dialógicas que orientan aprendizajes competenciales de nivel superior. Se trata de un mosaico de aportes de investigadores e investigadoras que promueven un análisis metodológico coherente y robusto, teóricamente fundamentado por la sistematización de evidencias en diferentes contextos de Europa y América Latina. Esta nueva edición apoya la innovación en la formación del profesorado y en la enseñanza de las ciencias con aportes y sugerencias concretas para el trabajo de aula en

las asignaturas de Física, Química y Biología. Se incluyen algunas orientaciones didácticas para las prácticas experimentales, la evaluación de los aprendizajes científicos, la utilización de la epistemología y la historia de la ciencia en la enseñanza, el trabajo del lenguaje científico en las clases y el uso de la tecnología educativa. Enseñanza de las ciencias para una nueva cultura docente. Desafíos y oportunidades supone un aporte para la tarea de reconstruir las ciencias naturales y su enseñanza en nuestras escuelas y universidades.
