A Nurse's Survival Guide to General Practice Nursing E-Book Karen Storey, Rhian Last, 2021-06-02 General practice nurses are faced with the daily challenge of keeping up-to-date with a vast range of conditions and their management. They also need to be familiar with evidence-based practice to inform high-level decision making. This Survival Guide will prove a valuable resource to nursing students experiencing general practice for the first time. Many universities across England now deliver 'Fundamentals of General Practice' programmes. This book will complement those programmes and provide essential information to assist nurses new to general practice. For experienced nurses working in general practice there are essential chapters covering the latest developments such as leadership, quality improvement, PCN developments and essential clinical knowledge that highlight the changes in clinical care in recent years, plus an acknowledgement of the impact the COVID 19 pandemic has had on management of care. This is an indispensable handbook for: - Defining the essential knowledge for meeting continuing professional development requirements - Understanding fundamental clinical skills to ensure best practice - Exploring new ways of working to consult and communicate with patients - Investigating ways to improve care delivery - Handy format makes for easy reference - Clear, bulleted content puts the emphasis on quick reference - Reflective activities - Diagrams clearly explain difficult concepts - Case studies highlight best practice

The Practical Compendium of Immunisations for International Travel Marc Shaw, Claire Wong, 2015-05-11 This inclusive work presents a comprehensive update on vaccines for the international traveller. In over 21 chapters, written by leading writers in travel medicine from Australia, New Zealand and Singapore, vaccinology for travel is explained in accessible terms with a focus on practical information. An initial introduction to immunology proceeds into common travel-related diseases and a risk-analysis for acquiring them, followed by vaccine administration techniques and examples of how this knowledge can be applied to the traveller with special risks including children, pregnant women and mass travel. The book also provides a summary of current clinical practice with respect to travel medicine in Australia, New Zealand and Singapore. This straightforward guide to the administration of vaccines for travellers is intended to be the one-stop for the primary healthcare professional needing authoritative practical information speedily. In addition to basic knowledge in vaccinology, guides are offered as to appropriate vaccine recommendations for travel to global regions together with vaccine contents in order to identify any precautions and contraindications. This text presents assessment and management guidelines for

common medical presentations to the travel health professional in primary-care health. Easy reference chapters, with practical management parameters for vaccination for travellers, will confidently guide any knowledge acquired permitting self-responsibility in vaccine-preventable disease prevention.

Conflict and Catastrophe Medicine James M. Ryan,Adriaan P.C.C. Hopperus Buma,Charles W. Beadling,Aroop Mozumder,David M. Nott,Norman M. Rich,Walter Henny,David MacGarty,2014-01-13 The first edition of conflict and catastrophe was produced in 2002 and a second, successful edition, followed in 2009. The decision to produce these works sprung from painful problems experienced by colleagues and authors themselves during many humanitarian and related deployments. The guide for both editions was to provide, in one volume, an entry level text covering all aspects of deployment, with an emphasis on medicine and healthcare in these environments. This third revised, expanded and updated edition of Conflict and Catastrophe Medicine: A Practical Guide follows its successful predecessors in providing a framework for use by health professionals visiting a resource constrained environment. Encompassing problems brought about by local conflict or natural disasters, the book covers preparation, organisation, logistics, treatment of major trauma and medical emergencies, and the special problems of delivering medicine in a hostile environment. This book comprehensively tackles: Self-preparation of health professionals to face a range of medical and related problems which occur in hostile and remote environments; War and disaster medicine, covering acute management, rehabilitation, reconstruction and prevention; Bridging the fields of medicine, nursing, international relations, history, politics and economics. The book also touches on nutrition, infection, trauma, psychiatry and psychological medicine and training.

Immunization in Practice World Health Organization,World Health Organization. Department of Immunization, Vaccines and Biologicals,2004-09-30 This practical information guide contains eight modules targeted at district and health facility staff, which seek to improve immunization services so as to reach more infants in a sustainable way, building upon the experiences of polio eradication. It includes materials on planning, monitoring and use of data to improve the service which

can be used at any level. This 2004 update replaces all previous editions. Topics covered include: target diseases and related vaccines, the cold chain, ensuring safe injections, planning immunization sessions to reach every infant, holding an immunization session, monitoring and using data, and building community support for immunization services.

Conflict and Catastrophe Medicine Adriaan P.C.C. Hopperus Buma, David Burris, Alan Hawley, James Ryan, Peter F. Mahoney, 2009-04-02 Six years have passed since the first edition of Conflict and Catastrophe Medicine was published. Those 6 years have not been peaceful: conflict has continued in Iraq, Afghanistan, Africa, and the Middle East. Terrorist attacks have continued around the world and London has had its first experience of suicide bombings. The landscape for humanitarian work is dangerous and challenging. The aim of this second edition is in line with the first edition – to provide an ent- level resource for people working (or considering work) in a hostile environment. Contributors with real hard one practical experience have been invited to share their views, and they do this with a raw honesty in a variety of writing styles. The second edition of Conflict and Catastrophe Medicine has benefited from these contributions, and we hope our prospective readers will do so as well. The book editors are donating their royalties from this book to the charity “Help for Heroes”. Adriaan Hopperus Buma Alan Hawley David G. Burris James M. Ryan Peter F. Mahoney v Preface to the First Edition This work is intended as an entry-level text aimed at medical, nursing and pa- medical staff undertaking work in a hostile environment.

Cold chain management and effective delivery of immunization services Bruce Wembulua, 2016-11-29 Essay from the year 2016 in the subject Health - Public Health, grade: 80/100, , course: Tropical Medicine, Surveillance and Immunization, language: English, abstract: Ancient Greeks had two gods of health: Aesculapius and Hygieia, therapy and prevention, respectively. Medicine in the twentieth century retains those two concepts, and vaccination is a powerful means of prevention. Vaccines provide the immunity that comes from natural infection without the consequences of natural infection; help protect people from harmful infections before they come in contact with the disease. All vaccines are thermo-sensitive and need to be properly stored and distributed. The success of an immunization program depends on a system that ensures that vaccines are not thermally damaged (by heat or freezing) during transport and storage. The system or network

that ensures vaccines are transported and stored at and within the recommended temperature range of +2oC to +8oC from the place of their manufacture to the point of vaccine administration is called the “cold chain”. The cold chain plays a crucial role in maintaining the potency and efficacy of vaccines throughout the immunization process and must therefore never be broken. This paper investigates aspects of cold chain management, such as temperature monitoring and cold chain system logistics.

Guidelines for the international packaging and shipping of vaccines ,2020-12-22 International shipping of vaccines is the first leg of the complex journey that vaccines undertake to reach the end users in a country. Particular challenges include the size and weight of packages, implementation of quality control checks at reception, ensuring environmental sustainability, and maintaining required temperatures during the journey. Although there are many possibilities of transport e.g. sea freight and terrestrial transportation, air freight currently remains the most widely used means of transport for vaccines. In recognition of this fact, these guidelines apply predominantly to the air freighting of vaccines. Transportation of vaccines from the manufacturing facility to the airport facility require the use of ground transportation, and reference is also made to the qualification of refrigerated road vehicles as well. The objective of these guidelines is to provide technical guidance to help ensure the quality of vaccines during all stages of the international air transportation process. These guidelines are applicable to all persons and institutions involved in international air shipment of vaccines from the premises of the product manufacturer to the recipient country. This includes all parties involved in shipment, vaccine manufacturers, logistics service providers (LSPs), freight forwarders, carriers and their employees. The relevant sections of these guidelines should also be considered for implementation by UN procurement agencies and other international procurement organizations, countries, donor agencies and certifying bodies.
