**Investment Banking Interview Questions and Answers - English** Navneet Singh, Preparing for an investment banking interview involves understanding both technical and behavioural questions. Below are common categories of questions you may face, along with sample answers to guide your preparation. 1. Basic Finance Concepts Q: What are the three main financial statements, and how do they relate to each other? A: The three main financial statements are the Income Statement, Balance Sheet, and Cash Flow Statement. The Income Statement shows a company's revenues, expenses, and profits over a period. The Balance Sheet shows a company's assets, liabilities, and shareholders' equity at a specific point in time. The Cash Flow Statement reconciles the beginning and ending cash balances by outlining cash inflows and outflows from operating, investing, and financing activities. These statements are interconnected. For example, net income from the

Income Statement feeds into the Shareholders' Equity section of the Balance Sheet (retained earnings), and it also flows into the top line of the Cash Flow Statement (starting point for operating cash flows).

2. Valuation Techniques Q: Walk me through a discounted cash flow (DCF) analysis. A: In a DCF, we project a company's free cash flows over a period (typically 5-10 years), discount them to the present value using the company's weighted average cost of capital (WACC), and then calculate the terminal value. The two components, discounted free cash flows and terminal value, give the enterprise value (EV). Steps: Project free cash flows for a set period. Determine the terminal value using either the Gordon Growth Model or Exit Multiple Method. Discount both the projected cash flows and the terminal value back to present value using WACC. Add the discounted cash flows and terminal value to determine the company's enterprise value. Q: What are some other methods to value a company? A: Besides DCF, common methods include: Comparable Companies Analysis (Comps): Comparing valuation multiples of similar public companies. Precedent Transactions Analysis: Looking at valuation multiples paid in similar historical transactions. Leveraged Buyout (LBO) Analysis: Estimating what a private equity firm would pay, leveraging a large portion of the purchase with debt.

3. Market and Industry Questions Q: What's happening in the market right now? A: Stay updated with current events, like interest rate changes, M&A trends, or economic reports (e.g., inflation rates, GDP). For instance, if interest rates are rising, it might affect valuation by increasing the cost of debt and reducing DCF valuation. Be prepared to discuss specific industries relevant to the firm you're interviewing with.

4. Accounting Knowledge Q: How does depreciation affect the financial statements? A: Depreciation affects all three financial statements: Income Statement: It reduces taxable income as an expense, lowering net income. Balance Sheet: It reduces the value of fixed assets (PP&E) and is reflected in accumulated depreciation, a contra-asset account. Cash Flow Statement: Depreciation is added back to operating cash flow because it is a non-cash expense. Q: What is goodwill, and how is it treated in financial statements? A: Goodwill arises when a company acquires another company for more than its fair value. It is an intangible asset on the Balance Sheet. Goodwill is not amortized but is tested for impairment annually. If impaired, the loss is recorded on the Income Statement, reducing net income and assets.

5. Behavioural and Fit Questions Q: Why do you want to work in investment banking? A: Highlight a passion for finance, analytical challenges, and deal-making. Example: I'm drawn to investment banking because it offers a unique combination of strategic thinking and analytical rigor. The fast-paced environment and exposure to large transactions align with my long-term goals of learning the intricacies of corporate finance and working on complex deals. Q: Tell me about a time you worked in a team under pressure. A: Use the STAR method (Situation, Task, Action, Result). Example: During my internship, my team was tasked with completing a valuation for a client's acquisition target under a tight deadline. I took the initiative to create detailed financial models, dividing the tasks among the team, and ensured we communicated effectively. We delivered the analysis ahead of schedule, impressing both the client and senior leadership.

6. Technical Questions Q: What is EBITDA, and why is it important? A: EBITDA (Earnings Before Interest, Taxes, Depreciation,

and Amortization) is a proxy for a company's cash flow from operations. It's important because it removes the impact of non-cash items (depreciation and amortization) and financing decisions (interest and taxes), allowing investors to compare operational performance across companies. Q: How would you value a company with negative earnings? A: When a company has negative earnings, methods like DCF and comparable multiples based on earnings may not be appropriate. Instead, you can use: Revenue multiples (EV/Revenue). Adjusted EBITDA multiples if the company has positive cash flow before interest, taxes, depreciation, and amortization. Asset-based valuation, particularly in distressed situations. 7. Brain Teasers / Problem Solving Q: How many gas stations are there in the U.S.? A: This question is testing your ability to think logically. Example approach: U.S. population is roughly 330 million. Estimate there's 1 car for every 2 people (165 million cars). Each car needs gas about once per week. Assume a gas station serves 2,000 cars per week. Divide 165 million by 2,000: around 82,500 gas stations. By preparing answers that demonstrate strong technical skills, awareness of current market conditions, and teamwork abilities, you'll be ready to tackle both the technical and behavioural parts of your investment banking interview.

Example answer: I know that [Bank Name] is one of the leading banks in retail and investment banking, with a strong presence in emerging markets. I've also read about your recent initiative to expand digital banking services, which I find exciting. 5. What are the key differences between retail and investment banking? How to answer: Show your understanding of the two sectors and their unique characteristics. Example answer: Retail banking focuses on individual consumers and offers services like checking accounts, loans, and mortgages, while investment banking deals with corporate clients, providing services such as mergers and acquisitions, underwriting, and asset management. 6. How would you evaluate a company for a loan? How to answer: Explain the typical steps in credit analysis, including reviewing financial statements, assessing cash flow, and evaluating collateral. Example answer: I would start by analysing the company's financial health through its income statement, balance sheet, and cash flow statement. I'd also assess its debt levels, industry risks, and whether it has sufficient collateral to secure the loan. 7. What is the difference between credit risk and market risk? How to answer: Clarify the distinction between these two types of financial risk. Example answer: Credit risk refers to the risk of a borrower defaulting on their loan, while market risk is the risk of losses due to changes in market conditions, such as fluctuations in interest rates, exchange rates, or stock prices. 8. Explain the concept of NPV (Net Present Value) and why it's important in banking. How to answer: Provide a clear definition and relate it to banking decisions. Example answer: NPV is the difference between the present value of cash inflows and the present value of cash outflows. margins on loans, while lower interest rates may boost loan demand but reduce margins. Banks also face pressure to adjust deposit rates to remain competitive. 11. Can you explain the Basel III Accord? How to answer: Summarize the key components of Basel III and its impact on banks. Example answer: Basel III is a set of regulatory standards introduced to strengthen the regulation, supervision, and risk management of banks. How to answer: Provide a clear distinction between these two types of bank capital. Example answer: Tier 1 capital is the core capital of a bank, including equity capital and disclosed reserves, and it's the primary buffer against risk. Tier 2 capital includes subordinated debt and other instruments that provide secondary support in the event of losses. 13. Describe a time when you worked under pressure and how you handled it. How to answer: Use a specific example, detailing the situation, task, action, and result (STAR method). Example answer: At my previous job, we were preparing for a major client presentation when a key team member fell sick. I had to quickly take over their responsibilities, reallocate tasks, and work long hours to meet the deadline. In the end, the presentation was successful, and the client was very impressed. 14. How would you manage a difficult client? How to answer: Focus on listening, empathy, and problem-solving. Example answer: I would start by listening carefully to understand the client's concerns. Then, I'd empathize with their situation and work collaboratively to find a solution that addresses their needs while also protecting the bank's interests. 15. Where do you see yourself in five years? How to answer: Demonstrate ambition but remain realistic. Align your goals with the bank's opportunities for growth and development. Example answer: In five years, I see myself taking on a leadership role within the bank, possibly as a senior relationship manager. I hope to develop deep expertise in financial products and expand my ability to contribute to the bank's growth and client satisfaction. Enterprise & Equity Valuation Interview Questions & Answers - English Navneet Singh, Here's a comprehensive list of Enterprise and Equity Valuation interview questions along with suggested answers: General Valuation Questions: Walk me through a DCF (Discounted Cash Flow) valuation. Answer: Start by projecting free cash flows (FCFs) for 5-10 years. Calculate the terminal value using either the Gordon Growth Method or Exit Multiple Method. Discount both the projected

FCFs and terminal value back to present value using the Weighted Average Cost of Capital (WACC). Sum the present values to find Enterprise Value (EV). Subtract net debt to determine Equity Value and divide by shares outstanding to find the share price. What is the difference between Enterprise Value and Equity Value? Answer: Enterprise Value (EV): Represents the total value of a firm, including debt and equity, and is independent of capital structure. Formula:  $EV = \text{Market Cap} + \text{Debt} - \text{Cash}$ . Equity Value: Represents the value available to shareholders (market cap). Formula:  $\text{Equity Value} = \text{Enterprise Value} - \text{Net Debt}$ . Why do you subtract cash in Enterprise Value? Answer: Cash is a non-operating asset and is already accounted for in Equity Value. It reduces the purchase price of a company since the buyer could use the acquired cash to pay off part of the debt. Technical Questions: What is WACC, and how do you calculate it? Answer: Weighted Average Cost of Capital (WACC) is the average rate of return a company is expected to pay its investors. Formula:  $WACC = \frac{E}{E+D} \times Re + \frac{D}{E+D} \times Rd \times (1 - Tc)$ . Where: E: Market value of equity D: Market value of debt V: Total value (E + D) Re: Cost of equity (e.g., via CAPM) Rd: Cost of debt Tc: Corporate tax rate Explain the Gordon Growth Model (Perpetuity Growth Model). Answer: The Gordon Growth Model calculates terminal value based on perpetuity growth:  $TV = \frac{FCF_{n+1}}{r - g}$ . Where:  $FCF_{n+1}$ : Free cash flow in the first year after the projection period. r: Discount rate (WACC). g: Growth rate of cash flows in perpetuity. What is the difference between levered and unlevered free cash flow? Answer: Unlevered FCF (Free Cash Flow to Firm): Cash flow available to all investors (debt and equity) before interest payments. Levered FCF (Free Cash Flow to Equity): Cash flow available to equity holders after paying interest and debt obligations. How do you value a company with negative cash flows? Answer: Use forward-looking metrics like revenue growth, unit economics, or DCF analysis with projections that show eventual profitability. Comparable (EV/Revenue multiples) can also be used. Accounting and Financial Metrics Questions: How does an increase in depreciation affect cash flow? Answer: Depreciation is a non-cash expense, so it reduces taxable income, which lowers taxes. This results in higher cash flow despite reducing net income. What is EBITDA, and why is it used in valuation? Answer: EBITDA stands for Earnings Before Interest, Taxes, Depreciation, and Amortization. It's a proxy for operating cash flow and is commonly used in multiples valuation as it excludes non-operating expenses. What multiples are commonly used in valuation? Answer: EV/EBITDA: Capital structure-neutral measure of operating performance. P/E (Price-to-Earnings): Focuses on equity valuation and earnings. EV/Revenue: Useful for early-stage or negative-earnings companies. EV/EBIT: Suitable for capital-intensive industries. Scenario-Based Questions: If two companies have the same P/E ratio, but one has higher debt, which company is riskier? Answer: The company with higher debt is riskier due to higher financial leverage, which increases default risk, especially in economic downturns. A company's stock price falls 20%, but its P/E ratio remains the same. What happened? Answer: The company's earnings likely fell by 20%, keeping the P/E ratio constant. How would a \$10 million increase in debt affect the Enterprise Value? Answer: Enterprise Value increases by \$10 million since debt is included in the calculation of EV. Would you rather have a company with high operating leverage or low operating leverage? Answer: It depends on the economic environment:

High operating leverage is beneficial during growth but risky during downturns due to higher fixed costs. Low operating leverage provides stability during downturns. Advanced Valuation Topics: What is an LBO (Leveraged Buyout) valuation? Answer: An LBO involves purchasing a company using a significant amount of debt, where the acquired company's cash flows pay down the debt over time. The valuation focuses on IRR (Internal Rate of Return) for equity investors. How do you account for synergies in valuation? Answer: Synergies are added as incremental cash flows in a DCF model or reflected through higher expected multiples in comparable analysis. What is a control premium, and why is it important? Answer: A control premium is the additional amount a buyer is willing to pay above market price to acquire a controlling interest in a company. It reflects the buyer's ability to implement strategic changes. Explain the concept of beta in CAPM. Answer: Beta measures a stock's volatility relative to the market. A beta of 1 indicates the stock moves in line with the market, while a beta greater than 1 implies higher risk and volatility. How do you handle cyclicity in valuation? Answer: Use normalized earnings or cash flows over a full economic cycle to smooth out the impact of fluctuations. What is the impact of share buybacks on Equity Value and Enterprise Value? Answer: Equity Value decreases as cash is used to repurchase shares, reducing outstanding shares. Enterprise Value remains unchanged as cash decreases, but equity value adjusts by the same amount.

Financial Analyst interview questions - English Navneet Singh, Preparing for a financial analyst interview typically involves understanding core financial concepts, analytical skills, and the ability to interpret and present financial data. Here are some common financial analyst interview questions along with brief explanations or guidance on how to approach them: Technical Questions: What is the difference between a Balance Sheet and an Income Statement? Answer: The Balance Sheet shows a company's financial position at a specific point in time, detailing assets, liabilities, and equity. The Income Statement shows a company's performance over a period, detailing revenues, expenses, and profits. Walk me through a Discounted Cash Flow (DCF) analysis. Answer: Start by projecting the company's free cash flows for a period, then determine the terminal value, and discount these cash flows and the terminal value back to the present value using the WACC. Summarize

by calculating the enterprise value and adjusting for net debt to arrive at equity value. What are some common valuation methods? Answer: Common methods include Discounted Cash Flow (DCF) analysis, Comparable Company Analysis (Comps), Precedent Transactions, and Asset-Based Valuation. How do you calculate Free Cash Flow (FCF)? Answer: Free Cash Flow is typically calculated as:  $FCF = \text{Net Income} + \text{Depreciation/Amortization} - \text{Capital Expenditures} - \text{Changes in Working Capital}$ . Note: Adjustments may vary depending on the context. What is EBITDA, and why is it important? Answer: EBITDA stands for Earnings Before Interest, Taxes, Depreciation, and Amortization. It is a measure of a company's operating performance and is often used as a proxy for cash flow from operations. How would you analyse a company's financial health? Answer: Examine key financial ratios, such as liquidity ratios (current ratio, quick ratio), profitability ratios (gross margin, return on equity), and leverage ratios (debt-to-equity, interest coverage). Additionally, analyse trends in revenue, expenses, and cash flow over time. Explain the concept of the Weighted Average Cost of Capital (WACC). Answer: WACC is the average rate of return a company is expected to pay its investors for using their capital. It is calculated by weighting the cost of equity and the cost of debt by their respective proportions in the company's capital structure. What is a sensitivity analysis? Answer: Sensitivity analysis involves changing one or more variables in a financial model to see how sensitive the outcomes are to these changes. It helps in assessing the risk and potential impact of different scenarios. How do you account for depreciation in financial models? Answer: Depreciation is typically a non-cash expense that reduces taxable income on the Income Statement. In cash flow analysis, it's added back to net income when calculating cash flow since it doesn't involve an actual outlay of cash. What is the difference between equity value and enterprise value? Answer: Equity value represents the value attributable to shareholders, calculated as market capitalization. Enterprise value represents the total value of a company, including debt and excluding cash, and is calculated as:  $\text{Enterprise Value} = \text{Equity Value} + \text{Debt} - \text{Cash}$ . Behavioural and Situational Questions: Describe a time when you used financial data to make a recommendation. Answer: Provide a specific example, detailing the problem, the data you analysed, the recommendation you made, and the outcome. Highlight your analytical process and decision-making skills. How do you prioritize tasks when working on multiple projects with tight deadlines? Answer: Discuss your time management strategies, such as breaking tasks into smaller steps, prioritizing based on deadlines and importance, and communicating effectively with stakeholders. Explain a situation where you identified a financial discrepancy. How did you handle it? Answer: Outline the steps you took to identify the discrepancy, investigate the cause, and how you resolved the issue. Emphasize your attention to detail and problem-solving abilities. How do you stay updated with changes in the financial markets or industry? Answer: Mention specific sources you follow, such as financial news websites, industry reports, and professional networks. You could also discuss how you apply this knowledge in your analysis. Describe a challenging financial analysis project you worked on. What was the outcome? Answer: Choose a project where you faced significant challenges, such as data limitations or complex financial models. Explain how you

overcame these challenges and the positive impact of your work. **Soft Skills and Analytical Thinking:** How would you explain complex financial information to someone without a finance background? Answer: Discuss how you would break down complex concepts into simple, relatable terms, use visual aids (charts, graphs), and focus on the key takeaways relevant to the person's role or interests. What tools or software do you use for financial analysis? Answer: Mention tools like Microsoft Excel, financial modelling software, Bloomberg Terminal, and any accounting software you are familiar with. Discuss how these tools help in your analysis. How do you ensure the accuracy of your financial analysis? Answer: Explain your approach to double-checking data, using peer reviews, and reconciling your analysis with other financial reports or benchmarks. Highlight your commitment to accuracy and thoroughness. Can you give an example of how you've contributed to cost savings or revenue growth? Answer: Provide a specific instance where your analysis or recommendation led to a tangible financial benefit for your company, such as identifying cost inefficiencies or opportunities for revenue expansion. **General Knowledge and Industry Awareness:** What do you think are the biggest challenges facing our industry right now? Answer: Research the company's industry and discuss current challenges, such as regulatory changes, economic conditions, or technological disruptions. Offer insights into how companies can address these challenges. What impact do you think interest rate changes have on a company's financial statements? Answer: Discuss how changes in interest rates can affect the cost of debt, interest expense, discount rates in DCF valuations, and overall borrowing costs, which in turn impact net income and cash flows. How would you assess whether a stock is overvalued or undervalued? Answer: Discuss using valuation multiples (e.g., P/E, EV/EBITDA), comparing with peers, performing a DCF analysis, and considering market conditions and company fundamentals to determine if a stock's price reflects its intrinsic value. **Conclusion:** These questions cover a range of topics that a financial analyst might encounter. Preparing thoughtful, detailed responses to these questions will help demonstrate your technical expertise, analytical abilities, and readiness for the role.
