International Communications Francis Lyall, 2016-04-22 The International Telecommunication Union (ITU) and the Universal Postal Union (UPU) are the two major international organisations that are involved in the regulation of international communications. The ITU deals with electronic communications including radio. The UPU deals with mail. As such, both organisations are of major importance in modern life. This volume provides an up-to-date analysis of their development from inception to the present as they have responded to technical and political change. It also makes suggestions for the future. The volume will be an invaluable resource for researchers and students, policy-makers, government officials and administrators, and legal staff in telecommunication and postal organisations.

Practice and Theory of Automated Timetabling Edmund Burke, Peter Ross, 1996-10-02 Provides detailed information about the signal transduction pathways used by interferons to activate gene transcription. In addition, this book discusses how the same pathways are used by many other cytokines and thus provide a forum for cross-talk among these important biological response modifiers. Additionally, the book introduces the interferon system and describes the interferon-inducible genes whose products are responsible for the cellular actions of interferons. The nature of the interferon receptors and how the transcriptional signals are transmitted from the receptors on the cell surface to the genes in the nucleus are discussed in detail. Finally, the use of similar pathways of signal transduction by other cytokines is highlighted.
