Maoliang Zhang, Antonio Caracausi, Ying Li, Daniele L. Pinti

Tales of the World's Scariest Volcanic Eruptions Riya Sharr, 2025-04-23 This gripping anthology explores the terrifying power of volcanoes through a series of historical eruptions that have shaken civilizations and reshaped the world. It begins with the legendary Santorini eruption of 1600 BC and the deadly destruction of Pompeii by Mount Vesuvius in AD 79. The book chronicles monumental eruptions like Mount Samalas in 1257 and Mount Hekla in 1104, both with global consequences. It recounts tragedies such as the Laki eruption in Iceland (1783), Mount Mayon in the Philippines (1814), and Mount Tambora in 1815, which caused the Year Without a Summer. The narrative continues with Krakatoa's explosive eruption in 1883 and Novarupta in 1912. It also covers 20th-century disasters including Mount Lassen, Mount Sakurajima, Mount Kelud, and Vesuvius in 1944. The anthology ends with Mount Popocatepetl's activity in 2023. Through vivid storytelling, it reveals how volcanoes have shaped history, impacted climate, and tested human resilience across the ages.

Forecasting Volcanic Eruptions Angelo Paone, Sung-Hyo Yun, 2020-04-22 The chapters presented in this International Volcanological Special Issue consider the characteristic features of a single volcano and/or a number of volcanoes worldwide (Jos and Biu Plateau volcanic provinces, Nigeria; Kachchh Rift Zone, Gujarat, India; Guamsan Caldera, Cheongsong, Korea; Somma-Vesuvius volcano, Napoli, Italy) in terms of future volcanic activity. The technical methods used are wide, innovative, as well as classic and reflect the knowledge presented in each chapter. The last chapter, however, deals with a new conceptual and methodological approach for the evaluation of volcanic risk. All these volcanoes (except Somma-Vesuvius volcano) are poorly studied so they deserve more attention, which is the goal of this volcanological book. Further studies are welcome to deepen the knowledge of each of the volcanoes presented.

Earth DK, 2024-05-07 Explore and understand the natural and human wonders of our planet Now in its third edition, this landmark encyclopedia both celebrates our planet and explains the science underpinning the forces and processes that have made and shaped it. Artworks, photographs, terrain models, and maps are used in combination to capture the beauty and power of landscapes and natural events and to show their hidden sides, explaining for example how an earthquake is triggered and how burning fossil fuels is driving a climate emergency. Directory sections placed throughout the book provide systematic and in-depth reference guides to core scientific information, such as more than 100 types of rocks and minerals. Similar sections contain visual profiles of some of the undisputed wonders of the natural world, from the Andes and

Himalayas to the Grand Canyon, Sahara Desert, and Amazon Rainforest. Thoroughly revised and updated to include new and spectacular landscape photography and capture the latest developments in fast-changing areas of geology and Earth science—including Earth history, climate change, and urban geography—this is an indispensable visual reference book for anyone who wants to understand how our planet works.
