Quality and Safety of Meat Products Begoña Panea ,Guillermo Ripoll,2020-11-13 Food safety is a major problem around the world, both with regard to human suffering and with respect to economic costs. Scientific advances have increased our knowledge surrounding the nutritional characteristics of foods and their effects on health. This means that a large proportion of consumers are much more conscious with respect to what they eat and their demands for quality food. Food quality is a complex term that includes, in addition to safety, other intrinsic characteristics, such as appearance, color, texture and flavor, and also extrinsic characteristics, such as perception or involvement.

Seafood research from fish to dish J.B. Luten,C. Jacobsen,K. Bekaert,A. Saebø,J. Oehlenschläger,2023-08-28 In this book, scientists from various disciplines address the advances in seafood research with respect to quality, safety, consumer's demands and processing of wild and farmed fish. The nutritional properties of marine lipids and lipid oxidation from model systems to seafood are presented. Several contributions on the effects of natural anti-oxidants to prevent oxidation are also included. Effects of dietary factors on muscle tissue quality, pre-rigor processing and brining of farmed cod are covered. The development of rigor mortis and the quality of muscle in relation to commercial and experimental slaughter techniques are also discussed. Consumer's knowledge, perception and need for information about seafood are discussed. Topics such as shelf life and microbial quality of seafood are covered in a range of contributions. Inactivation of micro organisms or biopreservation of seafood are included. Attention is paid to the development of the Quality Index Method for the evaluation of the quality of fresh fish and products. The characterisation and the quality of processed by-products are also presented. The presence of trace elements and organic contaminants in variety of seafood products is highlighted. Finally, several contributions regarding advanced methodologies to determine the quality of seafood are presented. Food Packaging and Shelf Life Gordon L. Robertson,2009-12-21 The importance of food packaging hardly needs

emphasizing since only a handful of foods are sold in an unpackaged state. With an increasing focus on sustainability and cost-effectiveness, responsible companies no longer want to over-package their food products, yet many remain unsure just where reductions can effectively be made. *Food Packaging and Shelf Life: A Practical Guide* provides package developers with the information they need to specify just the right amount of protective packaging to maintain food quality and maximize shelf life. Current food packaging must take into consideration the biochemical, chemical, physical, and biological changes that occur during processing, distribution, and storage. Organized according to chapters devoted to specific food products, this practical handbook defines the indices of failure for foods as diverse as milk, fruits, bottled water, juices, vegetables, fish, and beef. It discusses the deteriorative reactions for each food and reviews how different packaging materials may influence time to failure and thus shelf life. Other topics included biobased packaging, packaging and the microbial shelf life of foods, and shelf life testing methodology.

Modified Atmospheric Processing and Packaging of Fish W. Steven Otwell, Hordur G. Kristinsson, Murat O. Balaban, 2008-02-28 The recent introduction of carbon monoxide and filtered smokes in processing of fish and the continuing controversy for utilization of reduced oxygen packaging are arguably the highest profiled concerns influencing today's commerce and regulation of fresh and frozen fish about the world. The growing dependence on more distant and time-consuming exchange of fishery products requires processing and packaging options that help preserve product quality and product shelf life. Continuing reliance on modified atmospheric processing and package is inevitable, but this technology involves concerns for operational issues, regulatory guidelines, and market expectations. In *Modified Atmospheric Processing and Packaging of Fish: Filtered Smokes, Carbon Monoxide, and Reduced Oxygen Packaging*, experts from industry, academia, and agencies discuss the technology, commercial practices, and pertinent regulations of these fish processing applications, providing the most current and complete information on the topics available anywhere. Coverage of major seafood technology applications includes discussion of practices that are new, controversial, and rapidly expanding in production and markets throughout the world. Methods of application, shelf life, color enhancement, technical aspects, product quality, regulatory issues, microbial consequences, food safety concerns, and product assessments are fully addressed. *Modified Atmospheric Processing and Packaging of Fish* is the benchmark resource for the practice, science, and regulation of the most popular processing and packaging methods for fresh and frozen seafood worldwide.

Carbon Monoxide Determination and Penetration in Treated Fish Products Lihua Huo, 2008 Finally the fate of CO

was investigated during CO treatment and following storage of CO treated samples. We also studied the effect of external factors, such as CO concentration, and internal factors, such as Hb concentration, Hb oxidation status, pH value, ionic strength, lipid content, on the CO penetration rate and CO amount in the muscle. CO could get into the first layer (0-2 mm from surface) after only 15 min treatment, and as CO treatment time went on, CO amount in each layer of the muscle increased. In addition, the one-wavelength and two-wavelength spectrophotometric methods were also used to study CO penetration into the muscle, and results correlated well with the GC results.

China-United States Trade Barton V. Celone,2008 U.S.-China economic ties have expanded substantially over the past several years. Total U.S.-China trade, which totaled only \$5 billion in 1980, rose to \$343 billion in 2006. China is also now the 2nd largest U.S. trading partner, its 2nd largest source of U.S. imports, and its 4th largest export market. With a huge population and a rapidly expanding economy, China is a potentially huge market for U.S. exporters. However, economic relations have become strained over a number of issues, including China's large and growing trade surpluses with the United States; its failure to fully implement its World Trade Organization (WTO) commitments, especially in regards to intellectual property rights (IPR); its refusal to adopt a floating currency system; and its maintenance of industrial policies and other practices deemed unfair and/or harmful to various U.S. economic sectors. China is a major supplier of consumer products (such as toys), and an increasingly important supplier of various food products. Reports of unsafe seafood, pet food, toys, tires, and other products imported from China over the past year have raised concern in the United States over the health, safety, and quality of imported Chinese products. This book presents important analyses which deal in part with whether the US economy would seriously falter with a substantial decrease in trade activity with China.
