

# Monografía De La Clula

**Julio Arauz**

**Monografía Del Ciclo Celular Y La División Celular** Lenin Zanabria Ampuero, 2020-08-21 Seminar paper del año 2020 en el tema Biología - Botánica, Nota: 12, , Materia: BIOLOGIA, Idioma: Español, Resumen: El ciclo celular es la base para la reproducción de los organismos. Su función no es solamente originar nuevas células sino asegurar que el proceso se realice en forma debida y con la regulación adecuada. Un ciclo celular típico se da en dos fases gigantes que son: la interfase que se divide en tres fases: G1, S y G2 y la mitosis que se divide en profase, prometafase, metafase, anafase, telofase y citocinesis; En la Interfase, en G1 se produce la acumulación del ATP necesario para el proceso de división y el incremento de tamaño celular; la fase S se caracteriza por la replicación del DNA nuclear; finalmente, en G2, que es el tiempo que transcurre entre la fase S y el inicio de la Mitosis, la célula se prepara para mitosis. Por último, el ciclo celular culmina con la mitosis, donde se divide la cromatina duplicada de modo tal que cada célula hija obtenga una copia del material genético o sea un cromosoma de cada tipo. El final de la mitosis da cabida a un nuevo ciclo en G1 o puede que la célula entre en fase Go que corresponde a un estado de reposo especial característico de algunas células, en el cual puede permanecer por días, meses y a veces años. El ciclo celular en organismos eucariotas culmina con el proceso de división nuclear, que se denomina mitosis o también cariocinesis. Generalmente, la mitosis va acompañada de la división del citoplasma llamada citocinesis.
