Baseball's Greatest Quotations Paul Dickson, 2024-01-17 Baseball has always had its share of colorful characters, and over the years they have expressed themselves in eminently quotable ways. In this treasury of more than 5,000 quotations, noted baseball writer and observer Paul Dickson has captured the flavor of the game, in the words of its most important participants and onlookers. They are all here—from Aaron (Estella, Hank's mother) to Zoldack (Sad Sack Sam), and everyone in between. From the players, sportswriters, and politicians, to noted personalities in other fields (a very diverse group), everyone has his or her say on our nation's pastime. Dickson skillfully selects and annotates each remark, presenting the good, the bad, and the ugly of baseball lore. Included are extended lessons in Stengelese, Reggiespeak, Earl Weaverisms, and famous announcers' home run calls (who can forget Mel Allen's classic Going, going, gone!?). These and thousands of other cheerful, pithy, and memorable voices from the past through the present day are all captured in Baseball's Greatest Quotations.

Granting the Seasons Nathan Sivin, 2008-12-19 China's most sophisticated system of computational astronomy was created for a Mongol emperor who could neither read nor write Chinese, to celebrate victory over China after forty years of devastating war. This book explains how and why, and reconstructs the observatory and the science that made it possible. For two thousand years, a fundamental ritual of government was the emperor's "granting the seasons" to his people at the New Year by issuing an almanac containing an accurate lunisolar calendar. The high point of this tradition was the "Season-granting system" (Shou-shih li, 1280). Its treatise records detailed instructions for computing eclipses of the sun and moon and motions of the planets, based on a rich archive of observations, some ancient and some new. Sivin, the West's leading scholar of the Chinese sciences, not only recreates the project's cultural, political, bureaucratic, and personal dimensions, but translates the extensive treatise and explains every procedure in minimally technical language. The book contains many tables, illustrations, and aids to reference. It is clearly written for anyone who wants to understand the fundamental role of science in Chinese history. There is no comparable study of state science in any other early civilization.

The Biology of the Seasons John Arthur Thomson, 1915

The Background of Thomson's Seasons Alan Dugald McKillop, 1942-01-01 Background of Thomson's Seasons was first published in 1942. Minnesota Archive Editions uses digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions. There have been many valuable scattered studies of James Thomson's famous Seasons, but this is the first comprehensive book on the subject to be published in this country. This most popular long poem published in England in the eighteenth century well deserves reexamination. It is interesting not only to students of literature but also to those concerned with the history of ideas and the relationship of the fields of human knowledge. Thomson's Seasons reflects the trends of his time in literature, philosophy, science, history, and religion. Professor McKillop presents an illuminating and systematic analysis of the general philosophic and literary situation in which Thomson worked. Then he discusses Thomson's use of the natural sciences and of the literature of history, geography, and travel. He shows that the poet was also concerned with the patterns of human society, both primitive and civilized. The author reveals clearly how Thomson was indebted to the classical tradition; to the literary inspiration of Milton; to the scientific discussions and theories of Newton, Halley, Burnet, and the writers of popular physico-theological manuals; to the philosophical discussions of Shaftesbury and Locke; to the contemporary periodical essay; to the religious works of Blackmore and Hill; to the descriptions of remote regions and peoples in such writers as Scheffer, Varenus, and Maupertuis. All Thomson's borrowings and characteristic ideas fall into the framework of his poem. As this book was leaving the bindery, discovery was made in Glasgow of a catalogue of Thomson's library. The document substantiates many of Professor

McKillop's deductions.
