Green Energy Systems Vinod Kumar Singh, Naresh Bangari, Ratnesh Tiwari, Vikas Dubey, Akash Kumar Bhoi, Thanikanti Sudhakar Babu, 2022-12-08 Green Energy Systems: Design, Modelling, Synthesis and Applications provides a comprehensive introduction to the design, modeling, optimization and application of predictable and alternative energy systems. With a strong focus on the fundamentals, the book provides an overview of the energy potential and conversion topology of green energy sources, the design and analysis of off grid solar and wind energy sources, and their application in effective energy management in rural communities. Sections address energy systems from solar, wind, biomass, and hybrid energy sources, and include discussions of power electronic circuit topologies for energy conversion in both off and on grid systems. The second part of the book addresses energy harvesting at different scales, with a particular emphasis on micro energy harvesting for low power electronics like wearable devices. A wide range of applications are also discussed, alongside their challenges and solutions. Finally, case studies are presented on select topics to give readers deeper insights into the real-world applications discussed. - Introduces the fundamental principles underlying green energy systems, their characterization, analysis, modelling, and evaluation - Includes a wide range of applications of new functional materials for next-generation devices - Provides supporting data and calculations alongside real-world case studies

Educating for Language and Literacy Diversity M. Prinsloo, C. Stroud, 2014-11-12 Educators and researchers in variety of locations increasingly encounter linguistically and socio-culturally diverse groups of students in their classrooms and lecture halls. This book examines everyday forms of talk and writing in relation to standardised forms and schooling expectations to suggest ways forward in educational discourse.

Consciousness and Cognition Michael Thau, 2002-01-10 Our thinking about consciousness and cognition is dominated by a certain very natural conception. This conception dictates what we take the fundamental questions about consciousness and cognition to be as well as the form that their answers must take. In this book, Michael Thau shows that, despite its naturalness, this conception begins with and depends upon a few fundamental errors. Exorcising these errors requires that we completely reconceive the nature of both consciousness and cognition as well as the fundamental problems each poses. Thau proceeds by discussing three famous and important philosophical puzzles - Spectrum Inversion, Frege's Puzzle, and

Black-and-White Mary - each of which concerns some aspect of either consciousness or cognition. It has gone unnoticed that at a certain important level of generality, each of these puzzles presents the very same problem and, in bringing out this common problem, the errors in our natural conception of consciousness and cognition are also brought out. Thau's book will appeal to the casual reader interested in the proper solution of these puzzles and the nature of consciousness and cognition. The discussion of Frege's puzzle also contains important insights about the nature of linguistic communication and, hence, anyone interested in the fundamental questions in philosophy of language will also want to read the book.
