Handbook of Tumor Syndromes Dongyou Liu, 2020-05-08 Tumors/cancers are characterized by uncontrolled growths of abnormal cells that extend beyond their usual boundaries and disrupt the normal functions of affected organs and systems. While about 75%-80% of tumors/cancers arise sporadically without a family connection, 20%-25% appear to be familial (including 10%-15% nonhereditary familial tumors [or familial tumors] and 5%-10% hereditary familial tumors [or hereditary

tumors]). As nonhereditary and hereditary familial tumors often show both tumor-related and non-tumor-related (or syndromic) symptoms, they are referred to as tumor syndromes (or cancer susceptibility syndromes). In comparison with sporadic tumors/cancers, tumor syndromes (>300 described so far) tend to occur at a younger age, involve multiple organs and systems, produce multiple (often in a distinct spectrum) and bilateral lesions, form multiple hamartomatous, benign, or precursor lesions; locate in specific site(s), display unique syndromic features, and affect multiple members/generations of a family. This book provides state-of-art and authoritative coverage of nearly 100 tumor syndromes, with chapters presenting overviews of individual tumor syndromes in relation to their biology, epidemiology, pathogenesis, clinical features, diagnosis, treatment, and prognosis. Featuring contributions from oncologists, clinicians, and specialists, the book offers a reliable, comprehensive reference on tumor syndromes for scholars and students of medicine, dentistry, pharmacology, nursing, public health, and other biomedical disciplines. Key Features Reviews the biology, epidemiology, pathogenesis, and clinical features of tumor syndromes Contains up-to-date information on the diagnosis and treatment of tumor syndromes Includes expert coverage from leading oncologists and clinicians Related Titles J. Current Concepts of Sleep Apnea Surgery Thomas Verse,Nico de Vries,2019-05-30 A key new reference dedicated to the surgical management of sleep-disordered breathing... The importance of unobstructed respiration in sleep, and the long-term risks of sleep apnea, cannot be overemphasized. The therapeutic efficacy of the widely prescribed gold standard, CPAP, is compromised by low patient acceptance and compliance. In light of the limits of CPAP and other forms of conservative therapy (e.g., mandibular advancement devices), there is a growing tendency to explore and expand the role of surgery in the treatment of severe sleep apnea. New insights and developments in pathophysiology, surgical techniques, and implants have opened the way to increased success in treating sleep apnea surgically. This new work by leading international specialists provides a detailed, evidence-based approach to selected advanced surgical techniques, beginning with patient selection criteria, discussion of indications for and against surgery, choice of procedure (also in combinations), and more. Key Features: Systematic, practice-oriented approach to examination, diagnosis, and treatment Step-by-step description of surgical concepts and techniques Superbly illustrated with full-colored photographs and drawings Focus on those procedures that have been shown to be successful in specific situations Discussion of outcomes, success rates, risks, and potential complications; where evidence-based data are not available, expert opinion is provided Current Concepts of Sleep Apnea Surgery will be welcomed by residents, fellows, and board-certified surgeons in otorhinolaryngology and head and neck surgery.

The contributions are divided into sections on oxygen physiology, central chemoreception, breathing disorders in wakefulness and sleep, artificial ventilation, opioids and anesthetics, and modeling studies. Specific topics include the possible role of the carotid body responsible for hypoxic ventilatory decline in awake humans, end-tidal inspiratory activity and asthma, the physiological enigma of the congenital central hypoventilation syndrome, separate effects of respiratory stimuli and depressants on abdominal muscle action, and some theoretical consequences of a linear ventilatory response to both hypoxia and hypercapnia.
