Universities and Science in the Early Modern Period Mordechai Feingold, Victor Navarro-Brotons, 2006-01-09 This book includes most of the contributions presented at a conference on "Universities and Science in the Early Modern Period" held in 1999 in Valencia, Spain. The conference was part of the "Five Centuries of the Life of the University of Valencia" (Cinc Segles) celebrations, and from the outset we had the generous support of the "Patronato" (Foundation) overseeing the events. In recent decades, as a result of a renewed attention to the institutional, political, social, and cultural context of scientific activity, we have witnessed a reappraisal of the role of the universities in the construction and development of early modern science. In essence, the following conclusions have been reached: (1) the attitudes regarding scientific progress or novelty differed from country to country and follow different trajectories in the course of the early modern period; (2) institutions of higher learning were the main centers of education

for most scientists; (3) although the universities were sometimes slow to assimilate new scientific knowledge, when they did so it helped not only to remove the suspicion that the new science was intellectually subversive but also to make science a respectable and even prestigious activity; (4) the universities gave the scientific movement considerable material support in the form of research facilities such as anatomical theaters, botanical gardens, and expensive instruments; (5) the universities provided professional employment and a means of support to many scientists; and (6) although the relations among the universities and the academies or scientific societies were sometimes antagonistic, the two types of institutions often worked together in harmony, performing complementary rather than competing functions; moreover, individuals moved from one institution to another, as did knowledge, methods, and scientific practices.

**A Cultural History of Education in the Renaissance** Jeroen J. H. Dekker, 2023-04-20 A Cultural History of Education in the Renaissance presents essays that examine the following key themes of the period: church, religion and morality; knowledge, media and communications; children and childhood; family, community and sociability; learners and learning; teachers and teaching; literacies; and life histories. Education was the fuel for the communication and knowledge society of the Renaissance. This period saw increasing investments in educational institutions to meet the growing demand for literacy in the context of a religiously divided Europe with growing cities and emerging central governments. An essential resource for researchers, scholars, and students in history, literature, culture, and education.

**Development of Western Educational Thought** A.P. Sharma, 1997

*Humanism and Education in Medieval and Renaissance Italy* Robert Black, 2001-09-20 Based on the study of over 500 surviving manuscript school books, this comprehensive 2001 study of the curriculum of school education in medieval and Renaissance Italy contains some surprising conclusions. Robert Black's analysis finds that continuity and conservatism, not innovation, characterize medieval and Renaissance teaching. The study of classical texts in medieval Italian schools reached its height in the twelfth century; this was followed by a collapse in the thirteenth century, an effect on school teaching of the growth of university education. This collapse was only gradually reversed in the two centuries that followed: it was not until the later 1400s that humanists began to have a significant impact on education. Scholars of European history, of Renaissance studies, and of the history of education will find that this deeply researched and broad-ranging book challenges much inherited wisdom about education, humanism and the history of ideas.

*Elementary and Grammar Education in Late Medieval France* Sarah Lynch, 2025-10-01 The fourteenth and fifteenth centuries saw a marked increase in the availability of elementary and grammar education in Europe. In France, that rise took the form of a unique blend of trends also seen elsewhere in Europe, ranging from Church-dominated schools to independent schools and communal groups of teachers. Lyon, long a crossroad of ideas from north and south, was home to a particularly interesting blend of approaches, and in this book Sarah Lynch offers a close analysis of the educational landscape of the city, showing how schools and teachers were organised and how they interacted with each other and with ecclesiastical and municipal authorities.

**Studies in the History of Education Opinion from the Renaissance** Simon S. Laurie, 2013-10-28 First published in 1969. This volume includes selected historical studies of the various schools of thought and educational opinion. The author looks at the period of transition from the scholastic philosophy and monastic and cathedral schools down to these times, which may be regarded as the beginning of the Modern period, taking in such writings of Vittorino da Feltre, Roger Ascham, Francis Bacon, Comenius, John Milton and John Locke.
