Microwave-enhanced Chemistry Howard M. Kingston, Stephen John Haswell, 1997 This book is an indication of the breadth of microwave-enhanced chemistry as a new branch of chemical science. Microwave radiation can be used in many fields of chemistry in addition to sample preparation, decomposition, and extraction. It is now commonly used in the

synthesis of organic, organometallic, and inorganic compounds or catalysts. Microwave-assisted sample preparation has become a standard method in thousands of analytical chemical laboratories, and many other chemical manipulations are in the process of standardizing procedures that depend on microwave technology. This book will be helpful to many chemists around the world because it has been constructed to be an international reference text.

Etruscan by Definition Judith Swaddling, Philip Perkins, Sybille Haynes, 2009 Twelve papers by leading international scholars on the theme of the cultural, regional and personal identity of the Etruscans. The volume celebrates the originality of the Etruscan character manifest in its richly varied workshop production, and examines some unusual objects and buildings, considering what they tell us of Etruscan life, belief and influences. On a personal note, it considers how the Etruscans themselves wished to be identified and remembered. Two contrasting papers discuss attitudes to the Etruscans in the 18th century and the latest evidence for their origins using DNA studies. The papers were originally presented at a conference in 2006, celebrating the work of the renowned Etruscologist, Sybille Haynes.
