Islamic Geometric Patterns Eric Broug, 2008 Geometric patterns are perhaps the most recognizable visual expressions of Islamic art and architecture, magnificent in their beauty and awe-inspiring in their execution. Now, with the aid of this book, anyone can learn how to master this ancient art and create intricate patterns or re-create classic examples. An introduction guides the reader through the basics, and is followed by some of the best examples of geometric patterns from around the world, arranged into three levels of complexity, with careful, step-by-step instructions taking the reader through the stages of composition. The book also includes a CD-ROM, allowing you to experiment with Islamic geometric patterns on the computer.

Symmetries Of Islamic Geometrical Patterns Syed Jan Abas, Amer Shaker Salman, 1994-12-30 This book on symmetric geometric patterns of Islamic art has educational, aesthetic, cultural and practical purposes. Its central purpose is to bring to the attention of the world in general, and the people of Islamic culture in particular, the potential of the art for providing a unified experience of science and art in the context of mathematical education. Unlike other books on Islamic patterns, this book emphasizes the educational potential in the context of modern physics, chemistry, crystallography and computer graphics. The symmetric structure of about 250 Islamic patterns is presented. Simple, but detailed original, unpublished algorithms suitable for modern computer graphics are given for the construction of two-dimensional periodic patterns. Endorsed by prominent experts from the fields of Physics to Systems and Cybernetics, this book promises to be a must-read, not only for specialised mathematicians, but also for students, graphic artists, illustrators, computer hobbyists, as well as the lay reader keen to explore Islamic art.

Islamic Geometric Patterns Jay Bonner, 2017-08-17 The main focus of this unique book is an in-depth examination of the polygonal technique; the primary method used by master artists of the past in creating Islamic geometric patterns. The author details the design methodology responsible for this all-but-lost art form and presents evidence for its use from the historical record, both of which are vital contributions to the understanding of this ornamental tradition. Additionally, the author examines the historical development of Islamic geometric patterns, the significance of geometric design within the broader context of Islamic ornament as a whole, the formative role that geometry plays throughout the Islamic ornamental arts (including calligraphy, the floral idiom, dome decoration, geometric patterns, and more), and the underexamined question of pattern classification. Featuring over 600 beautiful color images, Islamic Geometric Patterns: Their Historical

Development and Traditional Methods of Construction is a valuable addition to the literature of Islamic art, architecture and geometric patterns. This book is ideal for students and scholars of geometry, the history of mathematics, and the history of Islamic art, architecture, and culture. In addition, artists, designers, craftspeople, and architects will all find this book an exceptionally informative and useful asset in their fields. Jay Bonner is an architectural ornamentalist and unaffiliated scholar of Islamic geometric design. He received his MDes from the Royal College of Art in London (1983). He has contributed ornamental designs for many international architectural projects, including the expansion of both the al-Masjid al-Haram (Grand Mosque) in Mecca, and the al-Masjid an Nawabi (Prophet's Mosque) in Medina, as well the Tomb of Sheikh Hujwiri in Lahore, and the Ismaili Centre in London – to name but a few. He is committed to the revitalization of Islamic geometric design through the teaching of traditional methodological practices. To this end, in addition to publishing, Jay Bonner has lectured and taught design seminars at many universities and conferences in North America, Europe, North Africa and Asia.

Draw Islamic Geometric Star Patterns Eric Broug ,2014-10-07 Learn how to draw seven geometric star patterns from around the Islamic world, using only a pencil, straight edge, and a pair of compasses. Patterns featured are from Baghdad, Fes, Cairo, Konya, Delhi and Damascus. Suitable for ages 9 and up. No calculations are necessary. The least complicated way of learning Islamic geometric design is to understand and use the same techniques that craftsmen in the Islamic world have used for centuries. These craftsmen were not mathematicians; they knew how to make things with their hands but they did not use measurements or calculate angles to make their compositions. Their tools were a pair of compasses, a ruler and a pencil. By drawing lines, circles and arcs they were able to make all their patterns and compositions. This is also how you will be able to draw these patterns. This book will teach you how to draw seven different star patterns. All the patterns in this book can be made without calculations and measurements. They can be made by hand or on a computer. All you need to be able to do is draw circles and lines. The tools you need if you are drawing by hand are a pair of compasses, a ruler and pencils. Each pattern is constructed in a step-by-step process.

Best Practice in Islamic Geometric Design Eric Broug,2019-01-30 What can we learn from 1,400 years of design excellence? What rules and conventions have guaranteed consistent quality for centuries across the Islamic world? Eric Broug looks at a wide range of visual evidence and codifies these rules: he reveals the design practices of traditional builders: how to scale a composition, how to create an engaging composition, how to innovate etc. This book shows how it was done, it shows how to apply best practice now, and it shows the most common problems in contemporary Islamic geometric design, and how to avoid them.

Islamic Design: A Mathematical Approach Brian Wichmann, David Wade, 2018-05-02 This book deals with the genre of geometric design in the Islamic sphere. Part I presents an overview of Islamic history, its extraordinary spread from the Atlantic to the borders of China in its first century, its adoption of the cultural outlook of the older civilisations that it conquered (in the Middle East, Persia and Central Asia), including their philosophical and scientific achievements - from which it came to express its own unique and highly distinctive artistic and architectural forms. Part II represents the mathematical analysis of Islamic geometric designs. The presentation offers unlimited precision that allows software to reconstruct the design vision of the original artist. This book will be of interest to Islamic academics, mathematicians as well as to artists & art students.

Practical Geometric Pattern Design Mirosław Majewski, 2020-02-10 This book is third in a series of textbooks on geometric pattern design used at the Istanbul Design Center. It is intended as a tutorial book for 30 hours basic course on geometric patterns in Islamic arts. The content of this book covers some major areas of geometric pattern design. In chapter 2 we discuss how one can approach a complex geometric pattern. It is the most important part in understanding the general structure of any pattern. In chapter 3 we discuss and experiment with patterns built on triangular grids and square grids. This is the simplest group of geometric patterns and usually neglected. In chapters 4 and 5 we deal with 6 and 12 fold patterns. These are the patterns with local symmetries D6 and D12. Usually, we refer to them as hexagonal and dodecagonal patterns. In chapters 6 and 7 we discuss octagonal patterns. Here we also briefly discuss differences between eastern (Central Asia and India) and western octagonal patterns (Morocco and Spain). Finally, in chapter 8 we discuss briefly decagonal patterns, i.e. patterns with D10 local symmetries. More about decagonal patterns readers can find in two other

books published by Istanbul Design Publishing in 2019.
