Phobic and Anxiety Disorders in Children and Adolescents Thomas H. Ollendick, John S. March, 2004-01-15 This comprehensive, interdisciplinary guidebook is designed for the mental health practitioner seeking to utilize proven and effective interventions with children and adolescents suffering from significant anxiety and phobic disorders. Each chapter is co-authored by a clinical child psychologist and a child psychiatrist, framing the volume's unique and balanced perspective. In addition, each chapter presents state-of-the-art assessment and treatment strategies for a panoply of phobic and anxiety disorders, including both psychosocial and pharmacological interventions. Moreover, the volume addresses important conceptual, epidemiological, and ethical issues in working with children and adolescents. All in all, this guide will help address the wide chasm between clinical research and clinical practice, uniting the forces intrinsic to child psychiatry and clinical child psychology.

This innovative, research-based book shows clinicians how to teach parents cognitive-behavioral therapy (CBT) techniques to use with their 5- to 12-year-old. Session-by-session guidelines are provided for giving parents the skills to promote children's flexible thinking and independent problem solving, help them face specific fears, and tackle accompanying difficulties, such as sleep problems and school refusal. User-friendly features include illustrative case studies, sample scripts, advice on combining face-to-face sessions with telephone support, and pointers for overcoming roadblocks. Several parent handouts can be downloaded and printed in a convenient 8 1/2 x 11 size.

Clinical Handbook of Psychological Disorders in Children and Adolescents Christopher A. Flessner, John C. Piacentini, 2017-07-17 Bringing together leading authorities, this volume synthesizes the breadth of current research on child

and adolescent treatment into a practical handbook for students and clinicians. The book was inspired by the preeminent work on adult disorders, *Clinical Handbook of Psychological Disorders* (now in its fifth edition), edited by David H. Barlow. It provides a concise overview of the disorders most commonly encountered in clinical practice and details evidence-based treatment approaches, largely grounded in cognitive-behavioral therapy (CBT). Procedures for assessment, diagnosis, case formulation, intervention, and progress monitoring are illustrated with rich extended case examples, including session transcripts. The book addresses nuts-and-bolts issues such as how to set up each session, what to cover, and how to broach difficult topics with children and parents. See also *Clinical Handbook of Psychological Disorders, Fifth Edition* (on adults), edited by David H. Barlow.

Social Anxiety Patricia M. DiBartolo, Stefan G. Hofmann, 2014-07-15 The third edition of *Social Anxiety: Clinical, Developmental, and Social Perspectives* integrates examinations of social anxiety, shyness, and embarrassment with the research on social anxiety disorder subtypes, biological theories and cognitive-behavioral or pharmacological treatment outcome studies. Clinicians, social and developmental psychologists and behavioral geneticists have all conducted research over the past ten years which is essential to furthering our understanding and treatment of social anxiety disorders. This book weaves together research findings gathered by renowned minds across these various disciplines, and deals with both theory and research. It explores what constitutes social anxiety, assesses the condition and its relationship to other psychological disorders, exploring the biological basis and treatment approaches as well. Coverage includes key issues not discussed fully by other books, including related disorders in adults and children, relationship to social competence and assertiveness, perfectionism, social skills deficit hypothesis, comparison between pharmacological and psychosocial treatments, and potential mediators of change in the treatment of social anxiety disorder. From the Author: Although social anxiety disorder (social phobia) is widely researched topic in psychiatry, other disciplines, such as social and developmental psychology, have independently been studying the same phenomena for many years. Yet, there has been very little cross-discipline communication and integration. The main objective of the book is to integrate the findings on social anxiety from various disciplines, including clinical psychology, psychiatry, social psychology, neuroscience, and developmental psychology.

- The most comprehensive source of up-to-date data, with review articles covering a thorough delineation of social anxiety, theoretical perspectives, and treatment approaches
- Consolidates broadly distributed literature into single source
- Each chapter is written by an expert in the topic area, providing more fully vetted expert knowledge than any existing work
- Integrates findings from various disciplines — clinical, social and developmental psychology, psychiatry, neuroscience — rather than focusing on only one conceptual perspective
- Provides a complete understanding of a complex phenomenon, giving researchers and clinicians alike a better set of tools for furthering what we know

Codeveloping Trajectories of Antisocial Behavior, Alcohol Use, Depression, and Anxiety During Adolescence Shannon Jean Dogan, 2009 Antisocial behavior, alcohol use, depression, and anxiety are the most common problems experienced by adolescents. It is well established that the majority of youth who experience one of these problems are more likely than not to experience a subsequent problem. Adolescents who experience multiple problems have the poorest outcomes and experience difficulties in multiple domains such as school, family, peers, and work. The occurrence and consequences of multiple problem youth are so great that much research has been devoted to this topic. Despite this attention, most research has focused on disorder rather than symptomology and there are many inconsistencies, limitations, and gaps in the literature. Understanding these linkages at the symptom level is crucial to interrupting this sequence. The present study uses a prospective longitudinal design and multiple-group, second-order parallel process latent growth curve modeling to examine the relations between the developmental trajectories of antisocial behavior, alcohol use, depression, and anxiety symptomology across adolescence and their interrelations--a first of its kind. Each outcome was assessed using multiple measures at four time points over a 5-year period in a sample of 451 young adolescents, beginning in the 8th grade (age: $M = 14.08$, $SD = 0.42$). In line with previous research, a significant association was found among all the symptom domains studied. However, fewer longitudinal relations were found between the different emotional and behavioral problems than previous research suggests. The results of this study clearly show that conduct problems are a risk factor for increases in

depression and anxiety. And, anxiety was a strong indicator of subsequent problems with depression. There was no evidence that either antisocial behavior or alcohol use influenced the trajectory of the other. Theoretical explanations for these associations are reviewed. The present study sheds new light on the codeveloping trajectories of four problems commonly experienced by adolescents. The findings of this study can help aid preventive efforts because symptoms of one disorder can be used to identify and intervene with populations at risk for symptoms of a secondary disorder. With this knowledge, these efforts have the potential to greatly reduce costs to human life and society.
