

The Econometrics Of Energy Systems

VM Jensen

The Econometrics of Energy Systems Jacques Girod, Jan Horst Keppler, 2006-12-14 The complexity and volatility of energy markets creates strong demand for quantitative analysis and econometric techniques. This book offers an introduction to the state of the art in econometric modelling applied to the most pertinent issues in today's energy markets for a better understanding of the working of energy systems and energy economics.

The Econometrics of Energy Demand William A. Donnelly, 1987-07-13 The energy crisis is the background for this insightful volume, which brings together several important strands of energy modeling work into an integrated unit. The Econometrics of Energy Demand successfully ties together, within a general policy-modeling context, models which assist in developing policy alternatives, as well as those which incorporate variables over which the decision-maker may exercise control. The process of model development includes: problem identification; model selection; database construction; implementation and documentation.

Energy Systems Analysis for Developing Countries P. Meier, 2012-12-06 The lecture notes presented in these pages were originally developed for use in the Energy Management Training Program (EMTP), sponsored by the Office of Energy, U. S. Agency for International Development. This program, held at Brookhaven National Laboratory (BNL) and the Institute for Energy Research, State University of New York at Stony Brook, is designed to train mid-career and senior government officials in developing countries in the techniques of energy policy analysis and planning, and covers, in addition to the material presented here, more detailed case studies in resource evaluation, pricing, conservation, financial analysis, and investment planning. Since its inception in 1978, some 220 individuals from 57 countries have attended the course. These notes have also been used in executive level seminars and in country training programs in the Sudan, the Dominican Republic, and the People's Republic of China. Attendance at the course is diverse, and typically includes planners, managers, engineers, and economists from energy planning agencies, ministries of finance and economic development, electric utilities, refineries and State Oil Companies, and specialized energy planning units for energy conservation and for regional cooperation. The monograph is designed not just as reading material to support lectures, but also as a general self-contained reference text for a very diverse audience: we have therefore included much introductory material. The presentation is focused on a discussion of the basic principles of systems analysis: and the case material has been specially designed to

illustrate these principles.
