IN TUNE WITH THE DIVINE Dr. George Akinkuoye,2023-04-26 • In today's fast-paced world, It is easy to get caught up in the hustle and bustle of everyday life, which many people call, the rat-race of life, leaving us, not only disconnected from ourselves within; but disconnected from true reality, from our goals, our values, and vision. • The rat-race of life most often, disconnect us from our purpose in life as a soul in incarnation, leaving us little time for reflection and growth. This is why In tune with the divine: Carefully selected quotations and explanations, with a calendar of 365 days a year, that is non-denominational, is imperative as a guide, to provide strength, motivation and to help reconnect you with yourselves and realign you with your true purpose, whatever it may be. The Aviation Legacy of Henry & Edsel Ford Timothy J. O'Callaghan,2000 The year 2003 marks the 100th anniversary of the founding of the Ford Motor Company and the Wright Brothers' first controlled, powered flight at Kitty Hawk, North Carolina. While most people were aware of the Fords' contribution to the automotive industry, most are largely unaware of their contribution to the development of mass production of large airplanes and their impact on commercial and military aviation. This book is written to chronicle the Fords' contribution to the aviation story during a critical period of its development. A period that saw the stick and fabric planes of World War I develop into the all-metal commercial airliner and

the mighty bombers of World War II.

Wings of Wood, Wings of Metal Eric Schatzberg,1999 Schatzberg shows that American aeronautical engineers and airplane designers were swayed by the symbolism of airplane materials, a symbolism that linked metal with technological progress and wood with preindustrial craft traditions. This symbolism encouraged the aeronautical community to focus research and development on metal airplanes at the expense of promising projects involving wood - despite the fact that other countries continued to produce highly successful aircraft with wood through the end of World War II. According to Schatzberg, technical personnel in the American military played the key role in this process. They had little evidence for metal's superiority but used their dominant influence to press the case that metal was the wave of the future and that airplanes would inevitably follow ships and abandon wood.
