Buddhist Cosmology: Science and Theology in the Images of Motion and Light W. Randolph Kloetzli,Randy Kloetzli,1989 Disagreements concerning the nature and extent of the universe constitute a focus of theological debate which permeates buddhism at every level. While there have been numerous attempts to catalogue the details of the Buddhist cosmologies, none has attempted a general interpretation of their underlying intention. This work attempts to begin the process of

interpreting the major phases of Buddhist Cosmological speculation by seeing in them various dramas of salvation tailored to the philosophical and theological predilections of their respective traditions. To a large extent, this interpretation relies on an examination of continuities between the Buddhist cosmologies and those of the hellenistic world as a whole. In the course of this study, two major cosmological traditions emerge; those which rely on metaphors of time and those which rely on metaphors of space. The former are associated with the Hinayana and the latter with the Mahayana forms of Buddhism. Each draws on images of motion and light to articulate its vision of the drama of salvation.

When Science Sheds Light on History Philippe Charlier, 2017-08-24 Well written and hard to put down. For anyone with an interest in forensic science, this book is a must-read.--Nigel McCrery, author of *Silent Witnesses: The Often Gruesome but Always Fascinating History of Forensic Science* This compilation is a fascinating read for the nonspecialist and will further serve as an inspirational set of recommended readings for the next generation of forensic scientists.--Tim D. White, coauthor of *The Human Bone Manual* Did Richard the Lionheart really die from a simple crossbow wound, or was there foul play? Who are the two infants buried in Tutankhamun's tomb? Could a skull found in a tax collector's attic be the long-lost head of Henri IV? In *When Science Sheds Light on History*, Philippe Charlier, the Indiana Jones of the graveyards, travels the globe to unravel these and other unsolved mysteries of human history. To get answers, Charlier looks for clues in medical records, fingerprints, and bloodstains. He reconstructs the face of Robespierre from masks molded from his body after death and analyzes charred bones to see if they really are Joan of Arc's. He discovers lethal levels of gold in the hair and bones of King Henry II's mistress Diane de Poitiers, who used gold salts to preserve her eternal youth. Charlier also pieces together the stories of people whose names and lives have long been forgotten. He investigates Stone Age graves, medieval necropolises, and museum collections. Playing the role of both crime-scene investigator and forensic anthropologist, Charlier diagnoses a mummy with malaria, an ancient Greek child with Down syndrome, and a stately Roman with encephalitis. He also delves into ancient miracles and anomalies: a mute boy able to speak after making sacrifices to the gods, a woman pregnant for five years, and a serpent that cured a broken toe with its tongue. Exploring how our ancestors lived and how they died, the forty cases in this book seek to answer some of history's most enduring questions and illustrate the power of science to reveal the secrets of the past.
