Reshaping STEM Education: Strategies for Curriculum Decolonization and Institutional Transformation Zahid Pranjol, Alia Amir, 2025-11-13 The field of STEM higher education is currently grappling with the imperative need for transformative discourse to address its historical, epistemological, and colonial underpinnings. Despite significant advancements in STEM disciplines, there remains a critical gap in inclusivity and equity within higher educational institutes. Recent studies have highlighted the persistent colonial structures that shape STEM education, often marginalizing diverse voices and perspectives. Efforts to decolonize STEM education are gaining momentum, yet there is a pressing need for comprehensive research and reflective insights to uproot these entrenched structures. This research topic aims to address these gaps by fostering a robust dialogue that transcends traditional boundaries, promoting a deeper understanding of the challenges and opportunities in reshaping STEM education through decolonial lenses. This research topic aims to provide a scholarly platform for researchers, educators, and practitioners to contribute groundbreaking research and reflective insights on decolonizing STEM higher education. The primary goal is to facilitate a robust dialogue that transcends traditional boundaries, fostering a deeper understanding of the challenges and opportunities in reshaping STEM education through decolonial lenses.

Their text, thoroughly updated for this new third edition, describes the major theories of mind as well as the major experimental results that have emerged within each cognitive science discipline. Introduction to Psychology James W. Kalat, Ruth H. Maki, 1996 In this thorough revision of his best-selling text, Jim Kalat does not simply cover psychology's major theories and studies. He creates a more active learning environment that encourages students to question information, asking themselves, How was this conclusion reached? Does the evidence really support it? Kalat teaches students to separate what sounds plausible from what can be backed up scientifically, and he shows students how to tell the difference between sound and flawed evidence. He succeeds in getting students to use the scientific method to question assertions, and in engaging their interests so they want to know more. Like no other author, Kalat is able

to speak directly to students, drawing them into psychological concepts and information in a way that actually changes their approach to learning. Kalat's relaxed, conversational writing style, coupled with humor, personal anecdotes, and exercises students can try themselves, help make the Sixth Edition an exceptional learning tool.
