Handbook of Research on Teaching Literacy Through the Communicative and Visual Arts, Volume II James Flood, Shirley Brice Heath, Diane Lapp, 2015-04-22 The Handbook of Research on Teaching Literacy Through the Communicative and Visual Arts, Volume II brings together state-of-the-art research and practice on the evolving view of literacy as encompassing not only reading, writing, speaking, and listening, but also the multiple ways through which learners gain access to knowledge and skills. It forefronts as central to literacy education the visual, communicative, and performative arts, and the extent to which all of the technologies that have vastly expanded the meanings and uses of literacy originate and evolve through the skills and interests of the young. Getting Beyond "Interesting" Olga M. Nesi, 2012-07-19 Make use of a detailed plan and ready-to-use lessons for teaching appeal terms and Book Hook writing to students. *Getting Beyond Interesting: Teaching Students the Vocabulary of Appeal to Discuss Their Reading* is a practical application book that gives librarians all the tools they need to implement the teaching of both appeal terms and Book Hook writing and sharing. When students know how to write Book Hooks and have access to an easy-to-use system for allowing students to share Book Hooks, the result is greatly increased reading through the power of peer recommendations. This book not only supplies a detailed plan for teaching appeal terms and Book Hook writing, but it also provides two extensive appendices containing all the black line masters and forms needed to implement these lessons. As a result, practitioners will be able to enhance their students' reading culture through increased sharing of reading—and most importantly, by empowering students with the ability to clearly define their reading preferences.

Multiple Perspectives on Mathematics Teaching and Learning Jo Boaler, 2000-07-30 Multiple Perspectives on Mathematics Teaching and Learning offers a collection of chapters that take a new look at mathematics education. Leading authors, such as Deborah Ball, Paul Cobb, Jim Greeno, Stephen Lerman, and Michael Apple, draw from a range of perspectives in their analyses of mathematics teaching and learning. They address such practical problems as: the design of teaching and research that acknowledges the social nature of learning, maximizing the impact of teacher education programs, increasing the learning opportunities of students working in groups, and ameliorating the impact of male domination in mixed classrooms. These practical insights are combined with important advances in theory. Several of the

authors address the nature of learning and teaching, including the ways in which theories and practices of mathematics education recognize learning as simultaneously social and individual. The issues addressed include teaching practices, equity, language, assessment, group work and the broader political context of mathematics reform. The contributors variously employ sociological, anthropological, psychological, sociocultural, political, and mathematical perspectives to produce powerful analyses of mathematics teaching and learning.
