Calgary Family Assessment Model, 2014 The co-developers of the Calgary Family Assessment Model (CFAM), Drs. Lorraine M. Wright and Maureen Leahey demonstrate the Calgary Family Assessment Model (CFAM) in clinical practice. Highlighting the structural, developmental, and functional categories of CFAM in clinical interviews, they present examples of specific questions the nurse can ask the family, illustrate the helpfulness of the genogram and ecomap, and demonstrate how to construct circular interactional diagrams in clinical settings. CFAM was initially an adaptation of an integrated and conceptual framework originally developed by Dr. Karl Tomm and colleagues at the Family Therapy Program, University of Calgary. Wright and Leahey adapted the original framework specifically for nurses to use when assessing families and named it the Calgary Family Assessment Model.

The nurse's role in the continuum of care is consistent with the emphasis of the current healthcare environment. The organizational framework focuses on the systems approach and is divided into four sections. The section on The Scope of Pediatric Trauma covers issues such as epidemiology, prevention, outcomes management, and ethical issues. The Clinical Concepts section addresses mechanism of injury, pre-hospital care, initial resuscitation, rehabilitation, pain management, nutrition, family-centered care, and violence. The section on System Injuries covers specific body system issues. The section on Multisystem Issues covers thermal and submersion injuries as well as the unborn infant as trauma victim and sequellae of trauma.
