The Rise of Games and High-Performance Computing for Modeling and Simulation National Research Council, Division on Engineering and Physical Sciences, Standing Committee on Technology Insight—"Gauge, Evaluate, and Review, Committee on Modeling, Simulation, and Games, 2010-04-15 The technical and cultural boundaries between modeling, simulation, and games are increasingly blurring, providing broader access to capabilities in modeling and simulation and further credibility to game-based applications. The purpose of this study is to provide a technical assessment of Modeling, Simulation, and Games (MS&G) research and development worldwide and to identify future applications of this technology and its potential impacts on government and society. Further, this study identifies feasible applications of gaming and simulation for military systems; associated vulnerabilities of, risks to, and impacts on critical defense capabilities; and other significant indicators and warnings that can help prevent or mitigate surprises related to technology applications by those with hostile intent. Finally, this book recommends priorities for future action by appropriate departments of the intelligence community, the Department of Defense research community, and other government entities. The Rise of Games and High Performance Computing for Modeling and Simulation will serve as a useful tutorial and reference document for this particular era in the evolution of MS&G. The book also highlights a number of rising capabilities facilitated by MS&G to watch for in the coming years.

Going to War Jason Darby, 2009 Do you want to learn how to create computer war games, but don't know how to get started or don't have any experience with game programming? Going to War: Creating Computer War Games shows you how to use the drag-and-drop game engine, Multimedia Fusion 2, to make your very own computer war games to play and share.

After an introduction to the Multimedia Fusion 2 interface and the basics of how to use it, you'll get started on the game that you'll create throughout the course of the book. You'll begin by making your game map, using a system of hexagon tiles to create the terrain and the different units you want to include in your game such as soldiers and tanks. Then you'll learn how to set rules for player movement, different types of terrain, and combat. You'll even find more advanced techniques such as how to implement officers, fortifications, and even a simple monetary system in your games. The book even discusses how to track and find bugs in your games and how to create an editor that allows you to easily apply data you've already created to new games. Everything you need to build your own war games is included with the book, and by the time you've worked your way through it you'll have designed your very own working and playable war game.

Mesmerization Gee Thomson, 2008 In the modern Western world, hundreds, if not thousands, of contagious ideas spread by word of mouth or through the media - 'spells' or 'memes' - make up contemporary culture and affect just about every aspect of our daily life. Some of the most powerful of these 'spells' form the core of Mesmerization. In this highly visual publication, the many facets of each spell are dissected and analysed within a unique graphic formula that exposes and encapsulates its meaning and purpose. The most successful of such constructs are the creation of the media - the image-makers, advertising executives, newspaper editors, creatives, designers, photographers and film producers who make up the ranks of the creative elite. Their dreams of affluence, comfort and wellbeing are being emulated the world over. More than we know, they determine what we believe, how we behave and think, and control our decisions as to what gets made, what gets seen, what gets heard. But there are cracks in this wonderland. Psychological disorders, drug dependency, obesity, gun crime and social addictions are on the rise. Worldwide, the gaping disparity between rich and poor nations, religious unrest, disease and famine, resource scarcity and fears over climate change head the agenda. The influence and aspirations of our lifestyles are central to these issues. How can we make headway in confronting our wider realities when we have an image machine that is totally at loggerheads with the need for restraint? By revealing the collective power of these insidious cultural influences, Mesmerization is a challenge to the creative industry, to those who control the motivational drivers underpinning the global psyche. In their hands rests the ability to change and transform future behaviour. This publication provides the catalyst.
