The Identification and Treatment of Gait Problems in Cerebral Palsy James R. Gage, Michael H. Schwartz, Steven E. Koop, Tom F. Novacheck, 2009-09-21 The only book to deal specifically with the treatment of gait problems in cerebral palsy, this comprehensive, multi-disciplinary volume will be invaluable for all those working in the field of cerebral palsy and gait (neurologists, therapists, physiatrists, orthopaedic and neurosurgeons, and bioengineers). The book is divided into two parts. The first is designed to help the reader evaluate and understand a child with cerebral palsy. It deals with neurological control, musculoskeletal growth, and normal gait, as well as cerebral injury, growth deformities and gait pathology in children with cerebral palsy. It emphasizes the most fundamental concept of treatment: manage the child's neurologic dysfunction first and then address the skeletal and muscular consequences of that dysfunction. The book has been thoroughly updated since the previous edition, with a greater focus on treatment and several entirely new topics covered, including chapters on the operative treatment of orthopaedic deformities. Psychometric Properties of the Gross Motor Function Classification System for Children with Cerebral Palsy

Sherif Salib,2003 The objective of this thesis was to evaluate the construct validity, the inter-rater reliability and the prognostic potential of the Gross Motor Function Classification System (GMFCS). The analysis was carried out in a cohort of 111 children with cerebral palsy who participated in the HBO Study for children with cerebral palsy; a randomized multicentre clinical trial. Construct validity was examined by correlating the results from the GMFCS with that of the Gross Motor Function Measure (GMFM), the Pediatric Evaluation of Disability Inventory (PEDI) and the JEBSEN test of hand function. The inter-rater reliability of the GMFCS was explored by comparing the GMFCS values calculated by one therapist, using the HBO Study pre-trial patient charts, with those of another physical therapist who was blinded to the initial scores done earlier on the same records, and who was well-versed in the GMFCS. The prognostic properties of the GMFCS were examined by comparing, within each of the GMFCS levels, the mean change over time, for the GMFM, the PEDI, and the JEBSEN. --

Panteliadis,2018-03-06 This third edition systematically reviews recent developments in the diagnosis and evidence-based treatment of cerebral palsy, a consequence of foetal and early infant brain damage resulting in lifelong disabilities with a range of clinical characteristics. Based on the diverse characteristics of cerebral palsy, children require care from various specialists, including neuro-paediatricians, orthopaedists, psychologists, epidemiologists, physiotherapists and occupational therapists. This work was written by an international team of such specialists, providing a comprehensive mix of perspectives and expertise.
