Daydreaming in the Solar System John E. Moores, Jesse Rogerson, 2024-10-22 A thrilling journey through the solar system that merges imagination with hard science. Imagine traveling to the far reaches of the solar system, pausing for close-up encounters with distant planets, moons, asteroids, and comets, accompanied by a congenial guide to the science behind what you see. What, for instance, would it be like to fly in Titan's hazy atmosphere? To walk across the surface of Mercury? To feel the rumble of a volcano brewing on one of Jupiter's largest moons? In Daydreaming in the Solar System, John Moores and Jesse Rogerson bring that dream to virtual life. Through a combination of story and science they let readers know what such an otherworldly experience would actually look, feel, and even taste like. With data gathered over the decades by our robotic spacecraft, and with Michelle Parsons's evocative illustrations, Moores and Rogerson boldly take you where no living being

has gone before, along the way giving an engaging and accurate explanation of the science. Where Carl Sagan's storied "spaceship of the imagination" provided a window to outer space, Daydreaming in the Solar System opens a door, inviting readers to step through and truly explore the strange new worlds of the solar system. Undertaking this interplanetary journey powered by hard science, there is no limit to where your daydreams can take you.

The Practical Astronomer Will Gater,2020-11-03 Discover the wonders of the Universe with this complete introduction to observing and understanding the night sky. This practical guide explains and demystifies stargazing, teaching you to recognize different kinds of objects and showing you how they move through the sky over the course of the night and the year. It shows you how to understand and enjoy the cosmos, building your practical astronomy skills from the basics to more advanced techniques. Beginning with an explanation of the Universe itself - how big is it, what shape is it, how old is it, and will it end? - it then takes you on a tour around the night sky, building up your knowledge in simple stages. Practical advice begins with naked-eye observations, then illustrated step-by-step instructions show you how to set up and use binoculars and telescopes and how to take your own pictures of the night sky. It also lets you take a closer look at the different objects you can view in the night sky, telling you how to train your eye to recognize basic patterns of stars (constellations) and how to tell planets apart from other celestial bodies, showing you how to observe them in an innovative step-by-step way. An atlas of the night sky is also included, with charts that can be used in both the northern and southern hemispheres throughout the year. Accessible, inspirational, and authoritative, The Practical Astronomer will enthuse and inform anyone who wants to expand their knowledge of the night sky.

Vestigial Surreality: Omnibus Two: Saturn's Rings: Episodes 29-56 Douglas Christian Larsen,2017-01-05 Omnibus 2: Saturn's Rings. Episodes 29-56. Reality, what a concept. Is life a puppet show and are we nothing but puppets? Could we really be living in a computer simulation? Through the ages, the conundrum of Reality has messed with the collective consciousness of humanity. The Allegory of Plato's Cave down through the ages to The Matrix. A chance meeting in the park leads two strangers to discover strange connections between themselves and the world, and in truth both had felt that perhaps there was something not quite right with the world, something different. They have both noticed improbable coincidences popping up in their lives, at an almost alarming regularity, and now, meeting, they witness strange signs in the heavens, and find themselves on a bizarre path that will make them question their very reality, and the reality of the world about them, and the universe itself. Do we live in a computer simulation?

Saturn's Moons Jo Catling, 2017-07-05 The German novelist, poet and critic W. G. Sebald (1944-2001) has in recent years attracted a phenomenal international following for his evocative prose works such as *Die Ausgewanderten* (The Emigrants), *Die Ringe des Saturn* (The Rings of Saturn) and *Austerlitz*, spellbinding elegiac narratives which, through their deliberate blurring of genre boundaries and provocative use of photography, explore questions of Heimat and exile, memory and loss, history and natural history, art and nature. *Saturn's Moons: a W. G. Sebald Handbook* brings together in one volume a wealth of new critical and visual material on Sebald's life and works, covering the many facets and phases of his literary and academic careers -- as teacher, as scholar and critic, as colleague and as collaborator on translation. Lavishly illustrated, the Handbook also contains a number of rediscovered short pieces by W. G. Sebald, hitherto unpublished interviews, a catalogue of his library, and selected poems and tributes, as well as extensive primary and secondary bibliographies, details of audiovisual material and interviews, and a chronology of life and works. Drawing on a range of original sources from Sebald's Nachlass - the most important part of which is now held in the Deutsches Literaturarchiv Marbach - *Saturn's Moons* will be an invaluable sourcebook for future Sebald studies in English and German alike, complementing and augmenting recent critical works on subjects such as history, memory, modernity, reader response and the visual. The contributors include Mark Anderson, Anthea Bell, Ulrich von Buelow, Jo Catling, Michael Hulse, Florian Radvan, Uwe Schuette, Clive Scott, Richard Sheppard, Gordon Turner, Stephen Watts and Luke Williams. Jo Catling teaches in the School of Literature at the University of East Anglia and Richard Hibbitt in the Department of French at the University of Leeds.
