Industry-Laboratory Partnerships National Research Council,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,1999-10-17 The Sandia National Laboratories asked the Board on Science, Technology, and Economic Policy (STEP) to hold a one-day symposium to review Sandia's proposal to develop a science and technology park. In light of the importance of industry-laboratory cooperation for the STEP Board's project on Government-Industry Partnerships for the Development of New Technologies, the Board convened a workshop bringing together executive branch officials, congressional staff, representatives from the private sector, and regional economists to discuss the Sandia S&T park initiative. The Sandia S&T Park, which Sandia National Laboratories, the City of Albuquerque, and the State of New Mexico are jointly developing, is a 285 acre site located adjacent to Sandia National Laboratories. Groundbreaking for the park took place in May, 1999.

Understanding Research, Science and Technology Parks National Research Council,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,Committee on Comparative Innovation Policy: Best Practice for the 21st Century,2009-09-08 Many nations are currently adopting a variety of directed strategies to launch and support research parks, often with significant financial commitments and policy support. By better understanding how research parks of other nations operate, we can seek to improve the scale and contributions of parks in the U.S. To that end, the National Academies convened an international conference on global best practices in research parks. This volume, a report of the conference, includes discussion of the diverse roles that research parks in both universities and laboratories play in national innovation systems. The presentations identify common challenges and demonstrate substantial differences in research park programs around the world.

Breakdown Jeff Bingaman,2022-10-15 In his thirty-year career representing the citizens of New Mexico in the US Senate, Jeff Bingaman witnessed great things accomplished through the legislative process. He also had a front-row seat for the breakdown of governing norms and the radical increases in polarization and partisanship that now plague what was once called the world's greatest deliberative body. Breakdown: Lessons for a Congress in Crisis traces the development of congressional dysfunction over more than three decades and provides eight case studies that examine how the crisis affects our government's ability to meet major policy challenges. We didn't always have a Senate that failed in its basic public obligations, including catalyzing a robust economy, confronting climate change, improving health care, fixing education, preserving public lands, and avoiding unnecessary wars. We do now. Presenting insightful analysis of the causes and consequences of the dysfunction in Congress, Breakdown shows how Congress fails at the tasks Americans expect it to perform and, more importantly, how it might begin again to succeed.

Threat Level Red Michael Erbschloe,2017-07-06 There is extensive government research on cyber security science, technology, and applications. Much of this research will be transferred to the private sector to aid in product development and the improvement of protective measures against cyber warfare attacks. This research is not widely publicized. There are initiatives to coordinate these research efforts but there has never been a published comprehensive analysis of the content and direction of the numerous research programs. This book provides private sector developers, investors, and security planners with insight into the direction of the U.S. Government research efforts on cybersecurity.
