Urban Climate Mitigation Techniques Mat Santamouris, Denia Kolokotsa, 2016-01-08 The urban climate is continuously deteriorating. Urban heat lowers the quality of urban life, increases energy needs, and affects the urban socio-economy. Urban Climate Mitigation Techniques presents steps that can be taken to mitigate this situation through a series of innovative technologies and examples of best practices for the improvement of the urban climate. Including tools for evaluation and a comparative analysis, this book addresses anthropogenic heat, green areas, cool materials and pavements, outdoor shading structures, evaporative cooling and earth cooling. Case studies demonstrate the success and applicability of these measures in various cities throughout the world. Useful for urban designers, architects and planners, Urban Climate Mitigation Techniques is a step by step tour of the innovative technologies improving our urban climate, providing a holistic approach supported by well-established quantitative examples.

Principles of Human Anatomy Gerard J. Tortora,1995 Designed for introductory courses in human anatomy, this text assumes no previous study of the human body. Instead, this book helps to facilitate a basic understanding of this broad discipline by presenting data, unified concepts and vocabulary in a manner that is easy for students to understand. Although the focus is on anatomy, links are made between structures and functions to help students understand anatomical concepts. The understanding of structure and function is further enhanced by considering defects and disorders in clinical settings. Organized by systems rather than regions, each chapter of this seventh edition has been revised. This text's coverage of the human anatomy is now complemented by new features, including questions with figures, colour anatomy photographs, improved readability, phonetic pronunciations, and more exhibits.
