Equipping Space Cadets Emily Midkiff, 2022-04-19 Winner of the 2023 Science Fiction Research Association (SFRA) Book Award 2022 Longlist Nominee for the Best Non-Fiction Award from the British Science Fiction Association *Equipping Space Cadets: Primary Science Fiction for Young Children* argues for the benefits and potential of “primary science fiction,” or science fiction for children under twelve years old. Science fiction for children is often disregarded due to common misconceptions of childhood. When children are culturally portrayed as natural and simple, they seem like a poor audience for the complex scientific questions brought up by the best science fiction. The books and the children who read them tell another story. Using three empirical studies and over 350 children’s books including *If I Had a Robot Dog*, *Bugs in Space*, and *Commander Toad in Space*, *Equipping Space Cadets* presents interdisciplinary evidence that science fiction and children are compatible after all. Primary science fiction literature includes many high-quality books that cleverly utilize the features of children’s literature formats in order to fit large science fiction questions into small packages. In the best of these books, authors make science fiction questions accessible and relevant to children of various reading levels and from diverse backgrounds and identities. *Equipping Space Cadets* does not stop with literary analysis, but also presents the voices of real children and practitioners. The book features three studies: a survey of teachers and librarians, quantitative analysis of lending records from school libraries across the United States, and coded read-aloud sessions with elementary school students. The results reveal how children are interested in and capable of reading science fiction, but it is the adults, including the most well-intentioned librarians and teachers, who hinder children’s engagement with the genre due to their own preconceptions about the genre and children.

Caustic Light in Nonlinear Photonic Media Alessandro Zannotti,2020-09-26 Caustics are natural phenomena, forming light patterns in rainbows or through drinking glasses, and creating light networks at the bottom of swimming pools. Only in recent years have scientists started to artificially create simple caustics with laser light. However, these realizations have already contributed to progress in advanced imaging, lithography, and micro-manipulation. In this book, Alessandro Zannotti pioneers caustics in many ways, establishing the field of artificial caustic optics. He employs caustic design to customize high-intensity laser light. This is of great relevance for laser-based machining, sensing, microscopy, and secure communication. The author also solves a long standing problem concerning the origin of rogue waves which appear naturally in the sea and can have disastrous consequences. By means of a far-reaching optical analogy, he identifies scattering of caustics in random media as the origin of rogue waves, and shows how nonlinear light-matter interaction increases their probability.
